Table S3: Limnological parameters measured during gammarid sampling in July (sampling of precopula pairs) and August (sampling of gammarids in the non-reproductive phase) 2020, up- and downstream of the 3-stage-WWTP as well as up- and downstream of the 4-stage-WWTP. July 2020 = 13.07.2020; August 2020 = 04.08.2020. Values that represent a very good ecological status according to the “Oberflächengewässerverordnung” (OGewV. Verordnung zum Schutz der Oberflächengewässer (Oberflächengewässerverordnung - OGewV) 2016) are marked with a green colour. Values indicating good ecological status are shown in yellow. If no good ecological status can be achieved, the value is marked in orange. Values that are not marked are not used to classify ecological status. Nitrate values are assessed using the AA_EQS. Values exceeding the AA-EQS are marked in red. Values below the AA-EQS are marked green.
