

Measuring Cytotoxicity of the Olive-derived Secoiridoids on B16F10 Cells

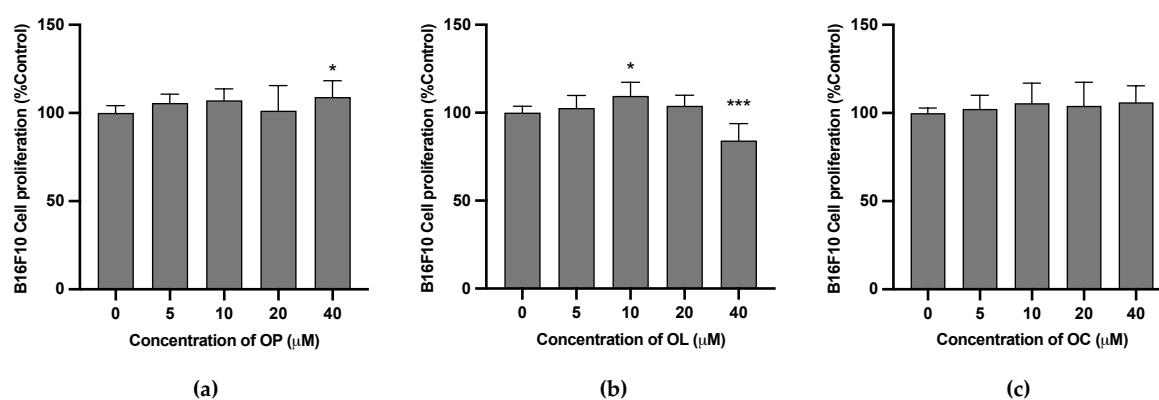

Figure S1. Cytotoxic effects of Oleuropein (OP), Oleocanthal (OL), and Oleacein (OC) were evaluated in B16F10 cells. Cells were treated with various concentrations of OP, OL, and OC for 48 hours. Each bar represents cell proliferation of (a) OP, (b) OL, and (c) OC.
