

Supplementary Materials: Investigation of the Influence of Glucose Concentration on Cancer Cells by Using a Microfluidic Gradient Generator without the Induction of Large Shear Stress

Tadashi Ishida, Takuya Shimamoto, Nobuya Ozaki, Satoshi Takaki, Takahiro Kuchimaru, Sinae Kizaka-Kondoh and Toru Omata

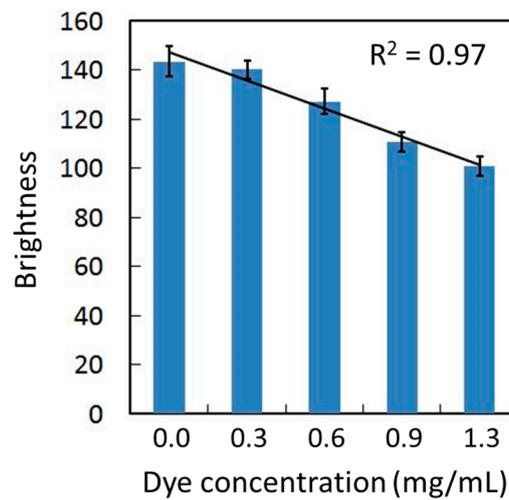

Figure S1. Calibration between dye concentration and brightness. The brightness of the colored water using the dye is linear in the range of our usage. The R-squared value is 0.97 when the data is linearly fitted.
