Comparative Transcriptomic Analysis of Temozolomide Resistant Primary GBM Stem-Like Cells and Recurrent GBM Identifies Up-Regulation of the Carbonic Anhydrase CA2 Gene as Resistance Factor

Ricarda Hannen, Martin Selmansberger, Maria Hauswald, Axel Pagenstecher, Andrea Nist, Thorsten Stiewe, Till Acker, Barbara Carl, Christopher Nimsky and Jörg Walter Bartsch

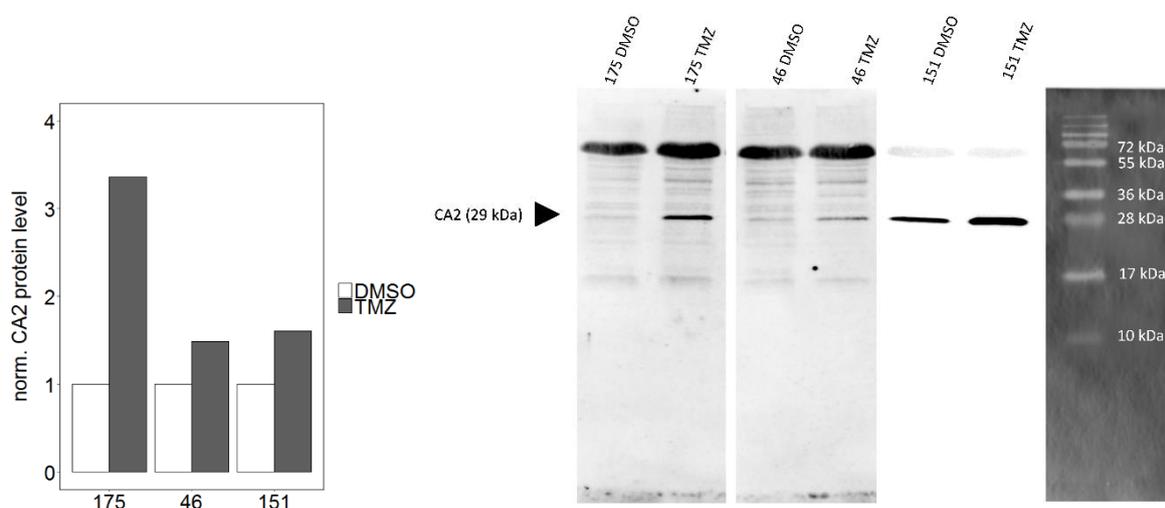

Figure S1. Supplementary Materials of Western Blot for Figure 5C.

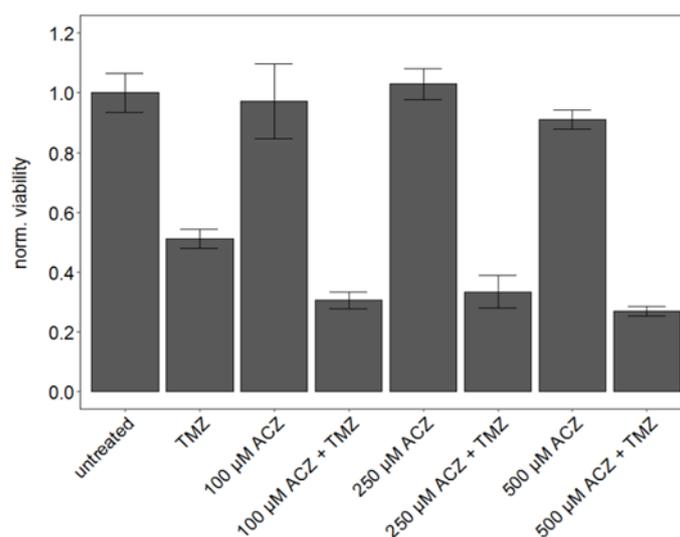

Figure S2. Higher ACZ concentrations were combined with the IC₅₀ of TMZ (here 250 μM) in a pilot study of $n = 1$ using the TMZ resistant cells 175. Note, that using higher concentrations than 100 μM did not lead to a more pronounced effect.
