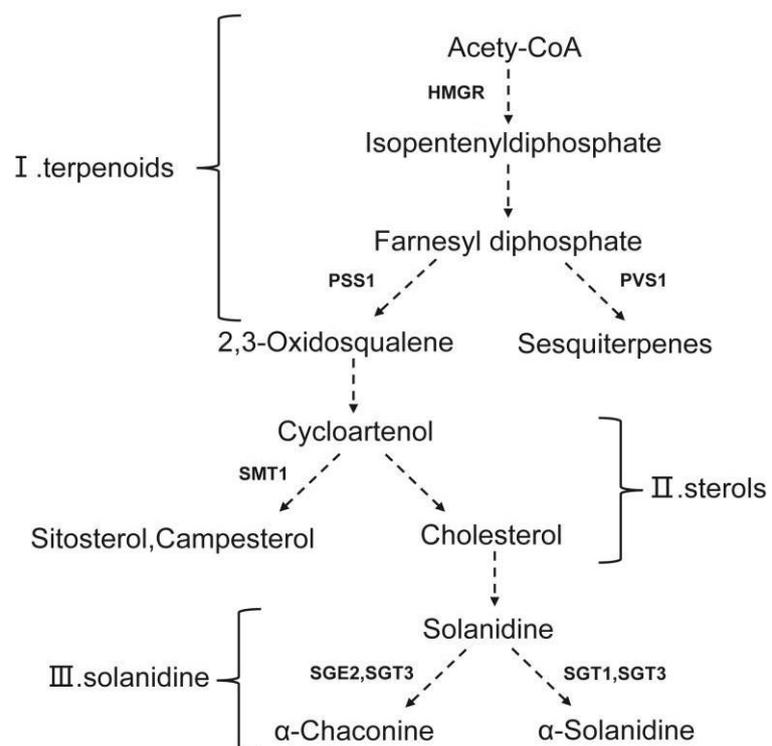

Figure S1. Simplified biosynthetic pathway for steroidal glycoalkaloids. The biosynthetic pathway is presented from acetyl-CoA to steroidal glycoalkaloids with additional pathways included that use the same substrate. Dashed arrows indicate multiple enzymatic steps. HMGR (3-hydroxy-3-methylglutaryl coenzyme A reductase 1&2), PSS1 (Squalene synthase), PVS1 (Vetispiradiene sesquiterpene cyclase), SGT1 (Solanidine galactosyltransferase), SGT2 (Solanidine glucosyltransferase) and SGT3 (Rhamnosyltransferase).

Table S1. Primer information for qRT-PCR

ID	Primer
