

**Supplementary Figure S1.** Correlation between % of CD8-positive immune cells in whole slides vs TMA cores. **(A)** A whole section and the corresponding TMA cores stained with CD8 antibody with a hematoxylin background. **(B)** Pearson correlation between % CD8-positive immune cells in 6 whole sections and the median of 3 corresponding TMA cores from each section. CD8-positive immune cells were identified using QuPath.

Patient	% stroma-associated CD8 T			% cancer cell-associated CD8 T

**Supplementary Table S1.** Forty patients with high-grade serous ovarian cancer (HGSOc) were analyzed for the median percentage of stroma- and cancer cell-associated CD8-positive cells using QuPath. The numerical values are color coded for easier visualization of CD8-positive cell patterns in each patient.
