\* For the pooled annual data (in the top two rows)  $n = 64$ , whereas  $n = 4$  for the rest of rows in the table (or each hybrid entry within a year). The values in the same column with different letters were significantly different ( $p < 0.05$ ).

Notes: All predators = total number of all predators recorded on an experimental plot at the seedling stage. The predator names are abbreviated as follows: Hippo. = the convergent lady beetle, *Hippodamia convergens* (Coleoptera: Coccinellidae); C.mac. = the pink-spotted lady beetle, *Coleomegilla maculata* (Coleoptera: Coccinellidae); C7 = the 7-spotted lady beetle, *Coccinella septempunctata* (Coleoptera: Coccinellidae); Harm. = the multicolored Asian lady beetle, *Harmonia axyridis* (Coleoptera: Coccinellidae); Scy. = the dusky lady beetle, *Scymnus* spp. (Coleoptera: Coccinellidae); Hooded = hooded (or flower) beetle, *Notoxus* spp. (Coleoptera: Anthicidae); Geo. = big-eyed bug, *Geocoris* spp. (Hemiptera: Geocoridae); Orius = the insidious flower bug (or minute pirate bug), *Orius insidiosus* (Hemiptera: Anthocoridae); Nabid = damsel bugs, *Nabis* spp. (Hemiptera: Nabidae); Earwigs = Dermapteran taxa identified as *Labidura riparia* (Labiduridae), and *Doru taeniatum* (Forficulidae); Spiders = all spider species observed; All predators = total number of all predators recorded on an experimental plot.

**Table S2.** The Pearson's Correlation Coefficients among the *S. frugiperda* injury ratings and predators recorded ( $n = 128$ ).
