Supplementary Table S1. Overview of the different factors involved in *Xist* expression control in mouse ESCs in rXCI.

Factor	Category	Coding	Regulation on <i>Xist</i>	Mode of action on <i>Xist</i>
P1	DNA element	X linked	Upregulation	Directly
P2	DNA element	X linked	Upregulation	Directly
P0	DNA element	X linked	Upregulation	Directly-alternative unstable <i>Xist</i> transcripts
<i>Xist</i> Intron 1	DNA element	X linked	Downregulation	Directly
RE79	DNA element	X linked	Upregulation	Directly
RE93-97	DNA element	X linked	Upregulation	Directly Indirectly via <i>Xert</i> upregulation
OCT4	Transcription Factor	Autosomal	Downregulation	Directly via <i>Xist</i> intron 1 Indirectly via <i>Tsix</i> and <i>Xite</i> upregulation, RNF12 downregulation
SOX2	Transcription Factor	Autosomal	Downregulation	Directly via <i>Xist</i> intron 1 Indirectly via <i>Tsix</i> and <i>Xite</i> upregulation, RNF12 downregulation
NANOG	Transcription Factor	Autosomal	Downregulation	Directly via <i>Xist</i> intron 1 Indirectly via <i>Tsix</i> upregulation, <i>Rnf12</i> downregulation
REX1	Transcription Factor	Autosomal	Downregulation	Directly Indirectly via <i>Tsix</i> upregulation
KLF4	Transcription Factor	Autosomal	Downregulation	Indirectly via <i>Tsix</i> upregulation
C-MYC	Transcription Factor	Autosomal	Downregulation	Indirectly via <i>Tsix</i> upregulation

PRDM14	Transcription Factor	Autosomal	Downregulation	Directly via <i>Xist</i> intron 1? Indirectly via <i>Rnf12</i> downregulation?
CTCF	Transcription Factor	Autosomal	Downregulation	Directly Indirectly via <i>Tsix</i> upregulation
YY1	Transcription Factor	Autosomal	Upregulation	Directly Indirectly via <i>Tsix</i> downregulation
GATA2/3/4/6	Transcription Factor	Autosomal	Upregulation	Indirectly via RE79/93-97
CHD8	Chromatin remodeller	Autosomal	Complex	Directly via accessibility modification of <i>Xist</i> promoter
KAP1	Scaffold protein	Autosomal	Downregulation	Indirectly via competition with RIF1 and <i>Tsix</i> stabilisation
RIF1	Multifaceted protein	Autosomal	Upregulation	Directly
MSL2/MOF	Histone acetyltransferase complex	Autosomal	Downregulation	Indirectly via H4K16ac deposition at <i>DxPas34</i> , YY1 recruitment to <i>Tsix</i> promoter and REX1 to <i>DxPas34</i>
SPEN	Chromatin remodeller	Autosomal	Upregulation	Indirectly via <i>Tsix</i> downregulation
RNF12	E3 ubiquitin ligase	X-Linked	Upregulation	Indirectly via REX1 degradation
GATA1	Transcription Factor	X-Linked	Upregulation	Indirectly via <i>Gata6</i> upregulation?
KDM5C	H3K4 demethylase	X-Linked	Upregulation	Directly via <i>Xist</i> promoter H3K4 demethylation
KDM6A	H3K27 demethylase	X-Linked	Upregulation	Directly via <i>Xist</i> promoter H3K27 demethylation?
<i>Tsix</i>	LncRNA	X-Linked	Downregulation	Direct via transcription through <i>Xist</i> promoter
<i>Xite</i>	LncRNA	X-Linked	Downregulation	Indirectly via <i>Tsix</i> upregulation–enhancer-like function
<i>Tsx</i>	LncRNA	X-Linked	Downregulation	Indirectly via <i>Tsix</i> upregulation?

<i>Linx/Lppnx</i>	LncRNA	X-Linked	Downregulation	Unclear/Direct <i>Xist</i> downregulation via intron 1- <i>DxPas34/OCT4-REX1</i>
<i>Jpx</i>	LncRNA	X-Linked	Upregulation	Unclear, RNA in <i>cis/trans?</i> at posttranscriptional level of <i>Xist</i> ?
<i>Ftx</i>	LncRNA	X-Linked	Upregulation	Directly via promoter-promoter interactions, decreased DNA methylation at <i>Xist</i> promoter
<i>Xert</i>	LncRNA	X-Linked	Upregulation	Directly via enhancer-like function
H3K27me1	Histone PTM	N/A	Downregulation	Direct <i>Xist</i> downregulation via <i>Xist</i> promoter heterochromatinisation
H3K27me3	Histone PTM	N/A	Downregulation Upregulation	Direct <i>Xist</i> downregulation via <i>Xist</i> promoter heterochromatinisation Indirect <i>Xist</i> downregulation via <i>Jpx</i> , <i>Ftx</i> , and <i>Xert</i> heterochromatinisation Indirect <i>Xist</i> upregulation via <i>Xite</i> , <i>Tsx</i> , and <i>Linx</i> heterochromatinisation
H4K20me2	Histone PTM	N/A	Downregulation	Directly via promoter heterochromatinisation
H3K9me2	Histone PTM	N/A	Downregulation	Directly via promoter heterochromatinisation
H3K9me3	Histone PTM	N/A	Downregulation	Directly via promoter heterochromatinisation
H3K36me3	Histone PTM	N/A	Downregulation	Directly via promoter heterochromatinisation
H3K4me2	Histone PTM	N/A	Upregulation	Directly via promoter euchromatinisation

H3K27ac	Histone PTM	N/A	Downregulation Upregulation	Indirect <i>Xist</i> downregulation by <i>Tsix</i> , <i>Linx</i> , <i>Xite</i> , and <i>Tsx</i> heterochromatinization Direct <i>Xist</i> upregulation via <i>Xist</i> promoter euchromatinisation Indirect <i>Xist</i> upregulation via <i>Jpx</i> , <i>Ftx</i> , and <i>Xert</i> euchromatinisation
H3K4me3	Histone PTM	N/A	Downregulation Upregulation	Indirect <i>Xist</i> downregulation by <i>Tsix</i> , <i>Linx</i> , <i>Xite</i> , and <i>Tsx</i> heterochromatinization Direct <i>Xist</i> upregulation via <i>Xist</i> promoter euchromatinisation Indirect <i>Xist</i> upregulation via <i>Jpx</i> , <i>Ftx</i> , and <i>Xert</i> euchromatinisation
DNA methylation	DNA methylation	N/A	Downregulation	Directly
<i>Tsix</i> TAD	Higher chromatin structure	N/A	N/A	Ensuring <i>Tsix</i> expression in the pluripotent state
<i>Xist</i> TAD	Higher chromatin structure	N/A	N/A	Ensuring timely expression of <i>Xist</i> upon exit of pluripotency
