Supplementary Material

Study	Inclusion criteria	Exclusion criteria
Burzotta et al.	- ICL defined as 40% to 80% stenosis by visual assessment in a non-distal segment of a major epicardial coronary artery. - Single vessel disease - Multivessel disease including only ICLs. - Multivessel disease including at least one ICL and previously treated angiographic critical stenosis	- Age≤18 years - Impossibility to give informed consent - Female sex with child-bearing potential - Life expectancy≤12 months - Factors making clinical follow-up difficult - LVEF<30% - Recent (<7 days) STEMI - Recent (<48 hours) NSTEMI - Prior STEMI in the territory supplied by the vessel under investigation - Severe myocardial hypertrophy - Severe valvular heart disease - Significant platelet count alteration (<100.000 cells/mm^3 or >700.000 cells/mm^3) - Gastrointestinal bleeding requiring surgery or blood transfusions within 4 previous weeks - History of clotting pathology - Known hypersensitivity to aspirin, heparin, contrast dye

		- Advance CKD with GFR<30 ml/min
Nam et al.	ICL defined as 40% to 70% stenosis by visual assessment in a proximal or mid part of a major epicardial coronary artery (no ischemia test needed)	• Primary or emergency setting PCI for ACS. • Prior CABG. • Multiple lesions on the same vessel. • Left main disease, primary myocardial disease or any major life threatening illness. • Contraindications to adenosine, ASA and clopidogrel.
D'Ascenzo et al.	Patients treated for ACS using OCT (from January 2014 to October 2015) or FFR (from January 2009 to December 2012) on culprit or non-culprit lesions.	- Patients with poor image quality, incomplete pull-back or missingdata. - Absence of signedinformed consent - Patients who did not implant II generation drug eluting stent, - Age<18 years old, pregnancy or shock, incomplete clinical data or loss at follow-up
De La Torre et al.	De novo ICL	LMA lesions
Koo et al.	De novo ICL (40 to 70%) in a target vessel with visual estimation diameter≥2,5mm.	- Life expectancy < 2 years. - Target lesion in LMA or previous CABG. - Increased bleeding risk
Soh et al.	NA	NA
Budrys et al.	Hemodynamically significant (FFR <0.8) long lesions necessitating > 30 mm of stent in patients with NSTEMI or Stable coronary artery disease	
Choi et al.	Successful PCI and High clinical/lesion/procedure related factor	-Cardiogenic shock at the index admission -Subject treated with only BMS or plain old balloon angioplasty during the index procedure. - Patients who are actively participating in another drug or device investigational study, which have not completed the primary endpoint follow-up period.

Table S1. Inclusion and exclusion criteria of single studies. NA, Not Available; FFR, Flow Fractional Reserve; PCI, Percutaneous coronary Intervention; CABG, Coronary Artery Bypass Grafting; ACS, Acute coronary Syndrome; LAD, Left Anteriore

Descending;LMA, Left Main Artery; IVUS, Intra-Vascular Ultra-Sonography, OCT, Optical Coherence Tomography; CKD, Chronic Kidney Disease; GFR, Glomerular Filtration Rate.

Study	FFR	Imaging
Burzotta et al.	FFR≤0,80	- Area Stenosis >75%. - Area Stenosis between 50% and 75% with MLA<2,5mm² or plaque rupture.
Nam et al.	FFR<0,8	MLA<4mm²
De La Torre et al.	FFR<0,75	Lesions with plaque burden>50% and: - MLA<4mm² in vessels with reference diameter >3mm. - MLA<3,5mm² in vessels with diameter between 2,5mm and 3mm.
Koo et al.	FFR<0,8	- MLA<3mm² - MLA 3-4mm² with plaque burden>70%

Table S2. Imaging and physiology criteria for Intermediate Coronary Artery Lesions (ICLs) revascularization. FFR, Flow Fractional Reserve;MLA, Minimal Lumen Area.

Risk of bias domains

Study	D1	D2	D3	D4	D5	Overall
Burzotta et al.	+	+	+	+	+	+
Koo et al.	+	+	-	+	+	-

Domains:
D1: Bias arising from the randomization process.
D2: Bias due to deviations from intended intervention.
D3: Bias due to missing outcome data.
D4: Bias in measurement of the outcome.
D5: Bias in selection of the reported result.

Judgement
- Some concerns
+ Low

Risk of bias domains

	D1	D2	D3	D4	D5	D6	D7	Overall
Nam et al.	-	+	+	?	-	+	-	-
D'Ascenzo et al.	-	+	+	?	+	+	-	-
Soh et al.	?	?	?	?	?	?	?	?
De La Torre et al.	-	+	+	?	+	+	-	-
Budrys et al.	-	+	+	?	+	+	-	-
Choi et al.	?	?	?	?	?	?	?	?

Domains:
D1: Bias due to confounding.
D2: Bias due to selection of participants.
D3: Bias in classification of interventions.
D4: Bias due to deviations from intended interventions.
D5: Bias due to missing data.
D6: Bias in measurement of outcomes.
D7: Bias in selection of the reported result.
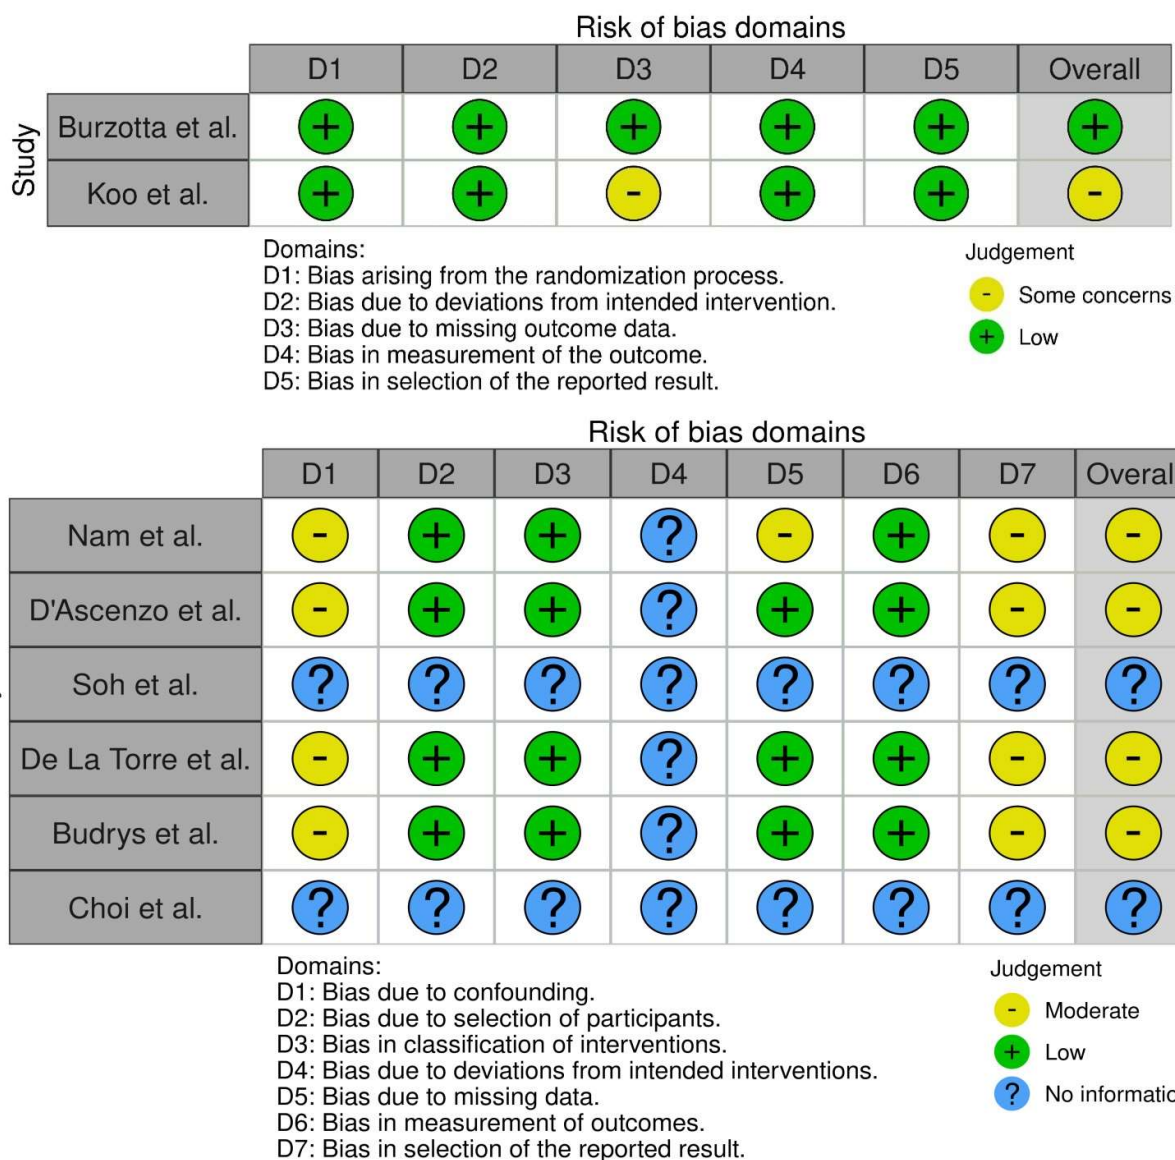

Judgement
- Moderate
+ Low
