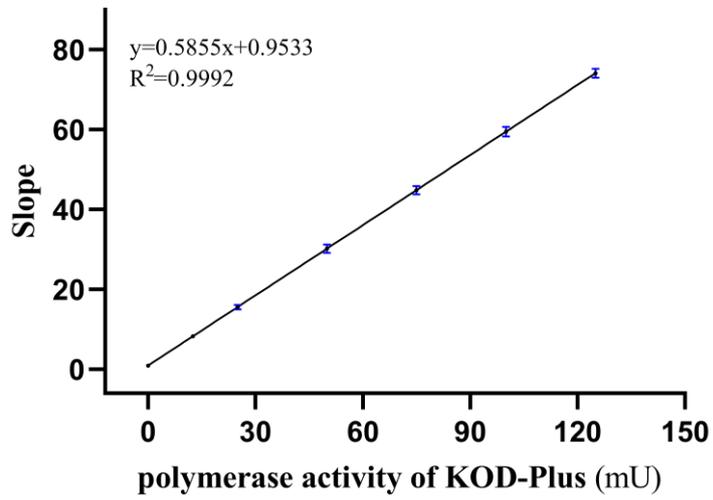

Figure S1. Titration of KOD-plus DNA Polymerase Activity determined with Eva EZ™ Fluorometric Polymerase Activity Assay Kit.

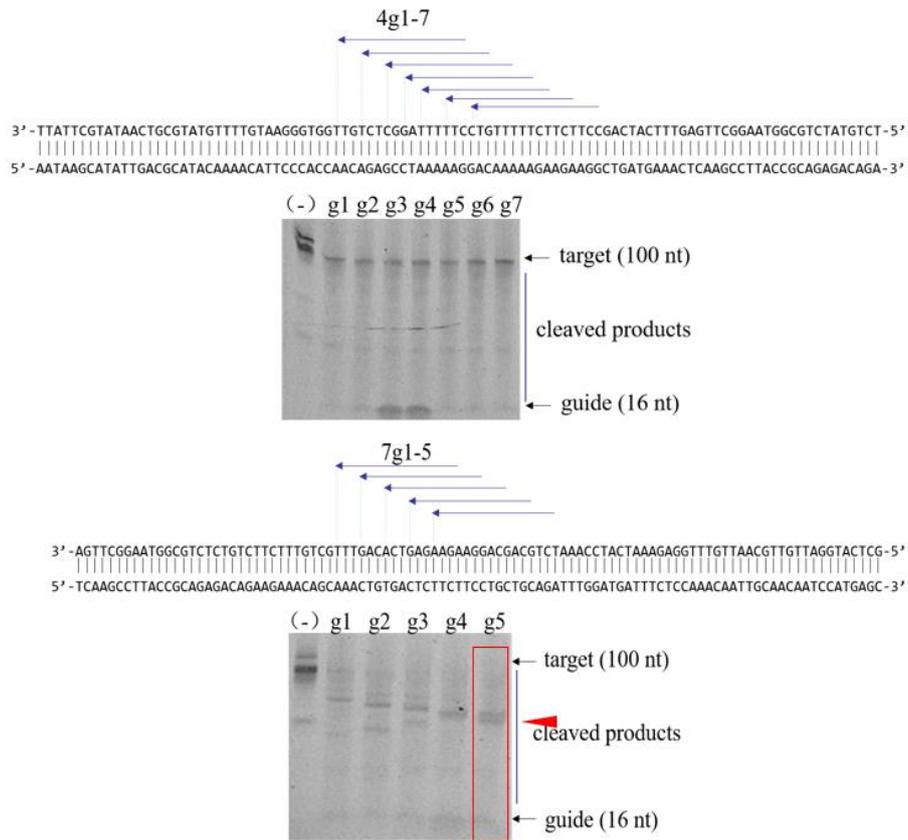

Figure S2. Screen analysis of input gDNA for efficient cleavage of the N gene by PfAgo. Guides 4g1-7 cover the first fragment while 7g1-5 cover the second fragment. The boundary of each guide is indicated on the top of the sequences. Urea-denaturing PAGE was performed to analyze the cleavage of the targets.
