

Figure S1: Kaplan-Meier survival curves of the 5 genes in FAM-related prognostic signature

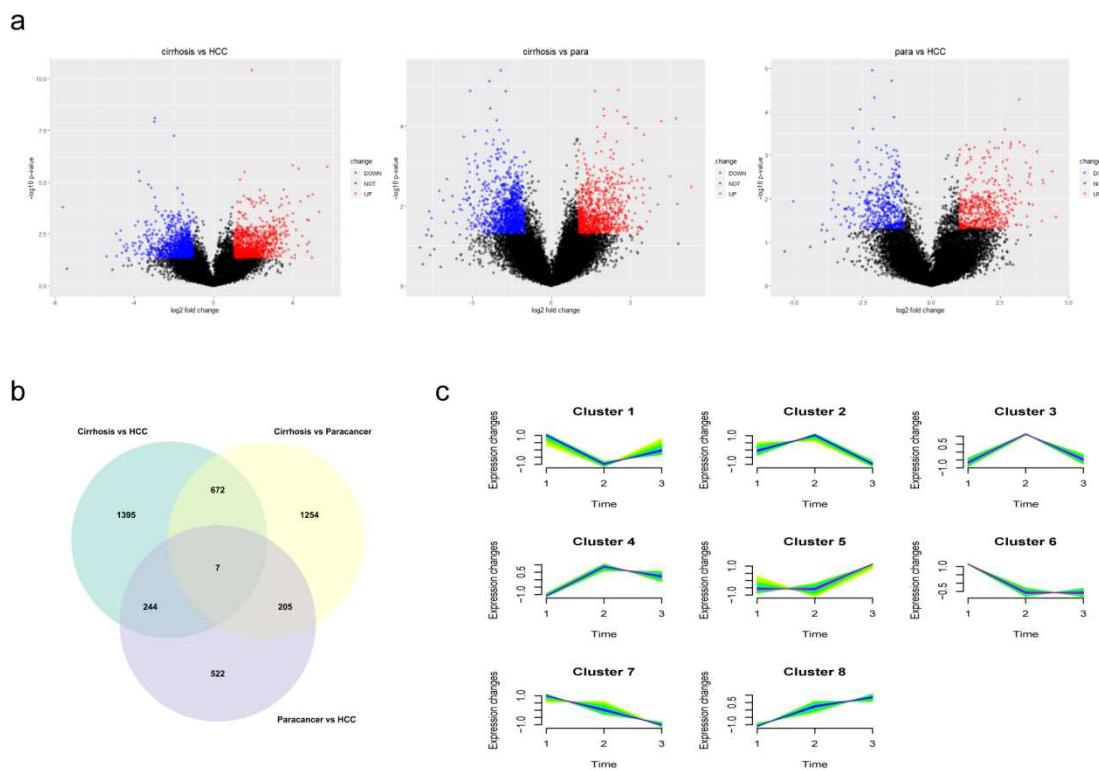

Figure S2: Identification of dynamic changing lncRNAs in process of cirrhosis to HCC. **a** Volcano plots revealed the differently expressed lncRNAs between each comparison. **b** Venn diagram revealed overall differently expressed lncRNAs by combining three DEG sets. **c** Mfuzz cluster analysis illustrated the changes in lncRNA expression in the process of HCC development.

Cutoff for logFC is 1
 The number of up gene is 268
 The number of down gene is 331

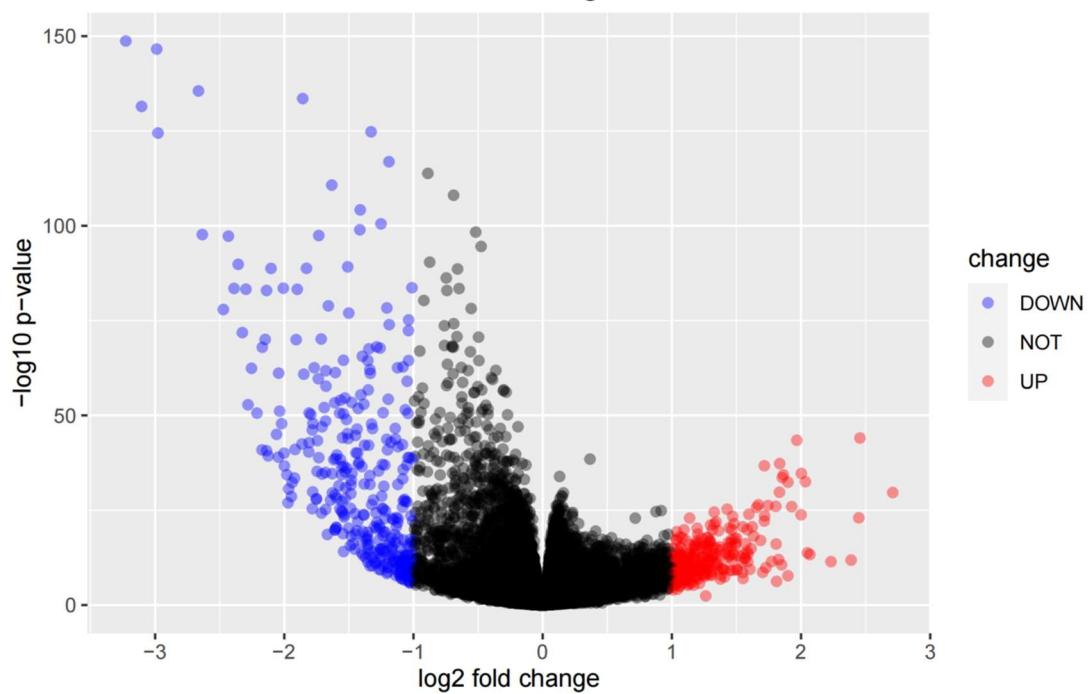

Figure S3: Volcano plots revealed the differently expressed mRNAs between paracancerous tissues and HCC tissues in TCGA-LIHC cohort.
