

## Supplementary figures

Supplementary Fig S1. Plots showing the pictorial representation of Genotype and overall mean performance of studied trait at each environment under study.

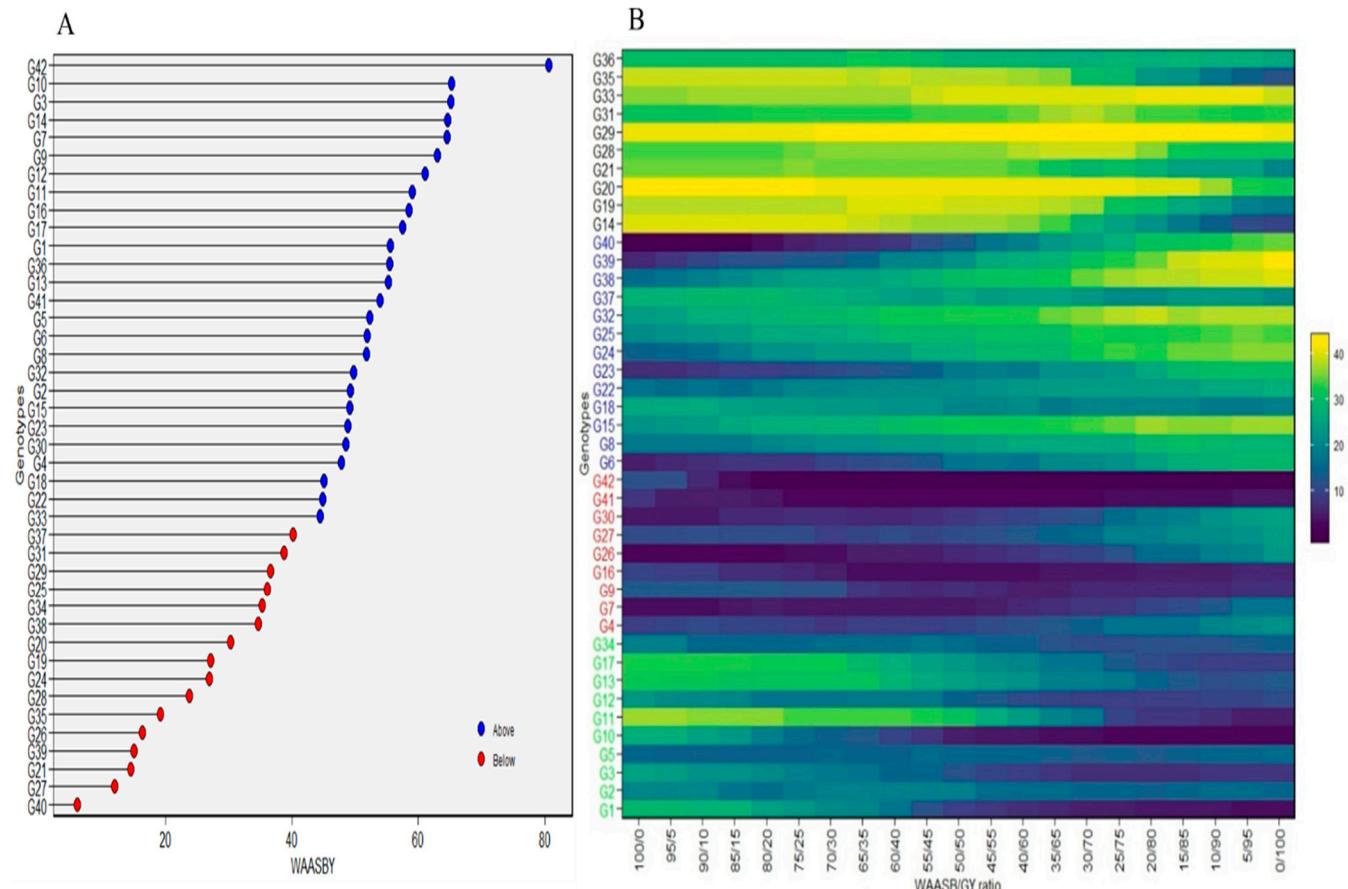

Supplementary Fig S2. (A) AMMI 2 biplots of PC1, PC2 and PC3

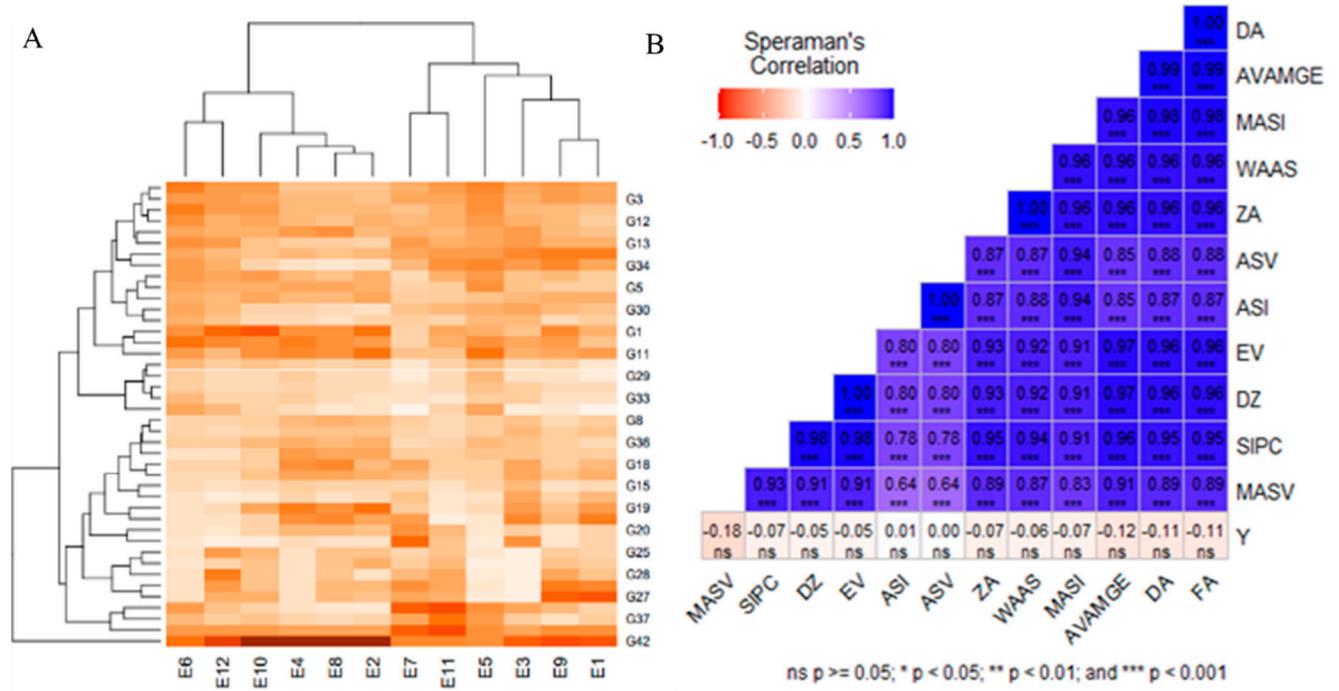

Supplementary Fig S3. (A) displays the calculated values of weighted average of stability (WAASB) and mean performance (Y) (WAASBY) for 42 genotypes, (B) Rankings of 42 genotypes under varying weights for stability and yield. The leftmost ranks reflect stability-based rankings, while the rightmost ranks correspond to grain yield-based rankings. In between

these extremes, the ranks are determined with diverse stability and yield weight combinations. The four clusters represent distinct genotype classes: (1) Genotypes with low productivity and instability; (2) Genotypes with productivity yet instability; (3) Genotypes that are highly productive and stable; and (4) Genotypes that are stable but less productive

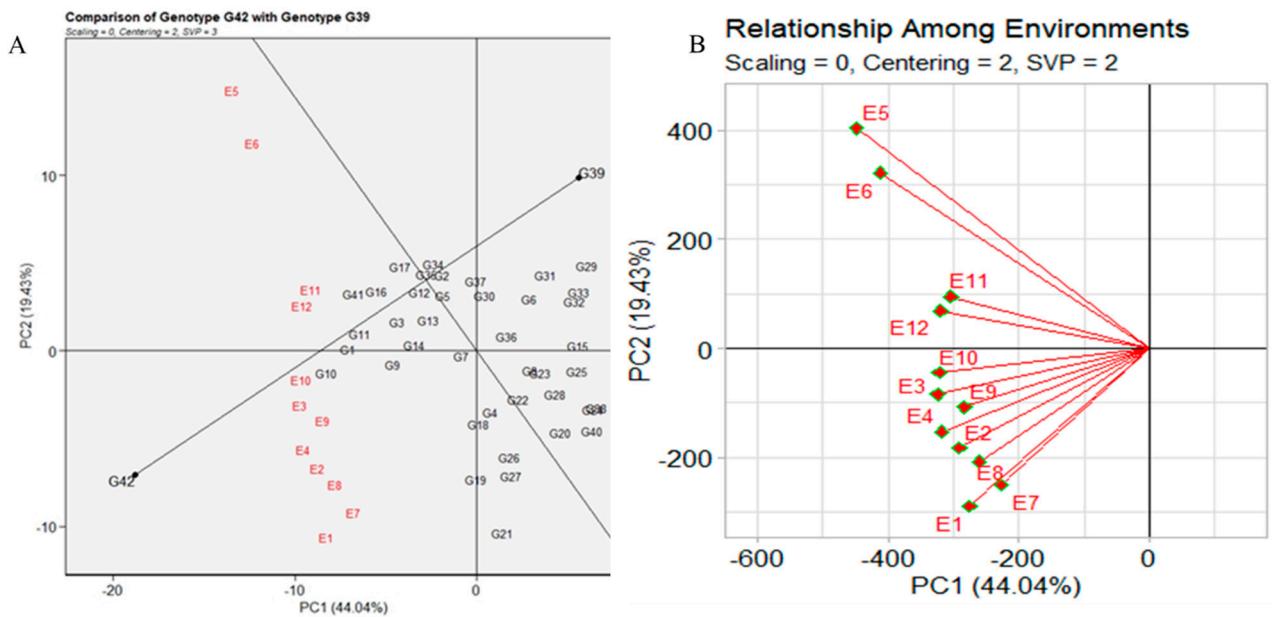

Supplementary Fig S4. (A) Heatmap of Genotypes x environmental interactions, (B) Correlation between stability indices.

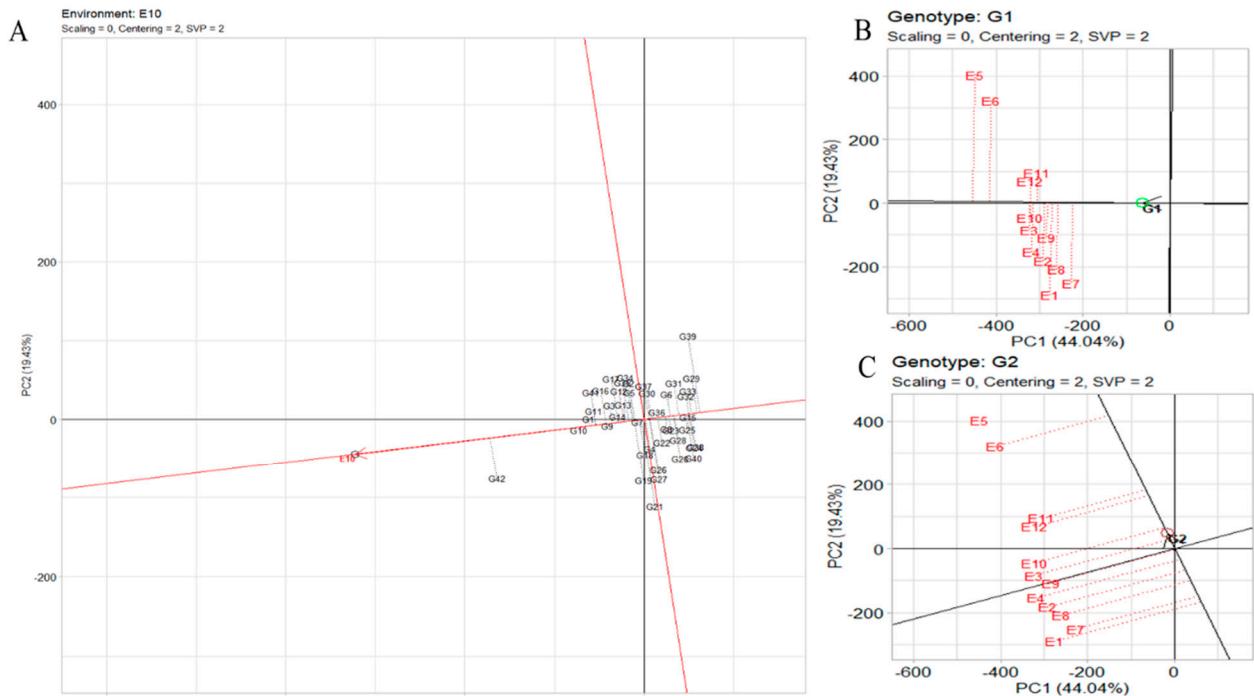

ASI, AMMI Stability Index; ASV, AMMI stability value; AVAMGE, sum across environments of the absolute value of GEI modelled by AMMI; DA, Annicchiarico's D parameter; DZ, Zhang's D parameter; EV, averages of the squared eigenvector values; FA, stability measure based on fitted AMMI model; MASI, Modified AMMI Stability Index; MASV, modified AMMI stability value; SIPC, sums of the absolute value of the IPC scores; ZA, absolute value of the relative contribution of IPCs to the interaction; WAAS, weighted average of absolute scores.

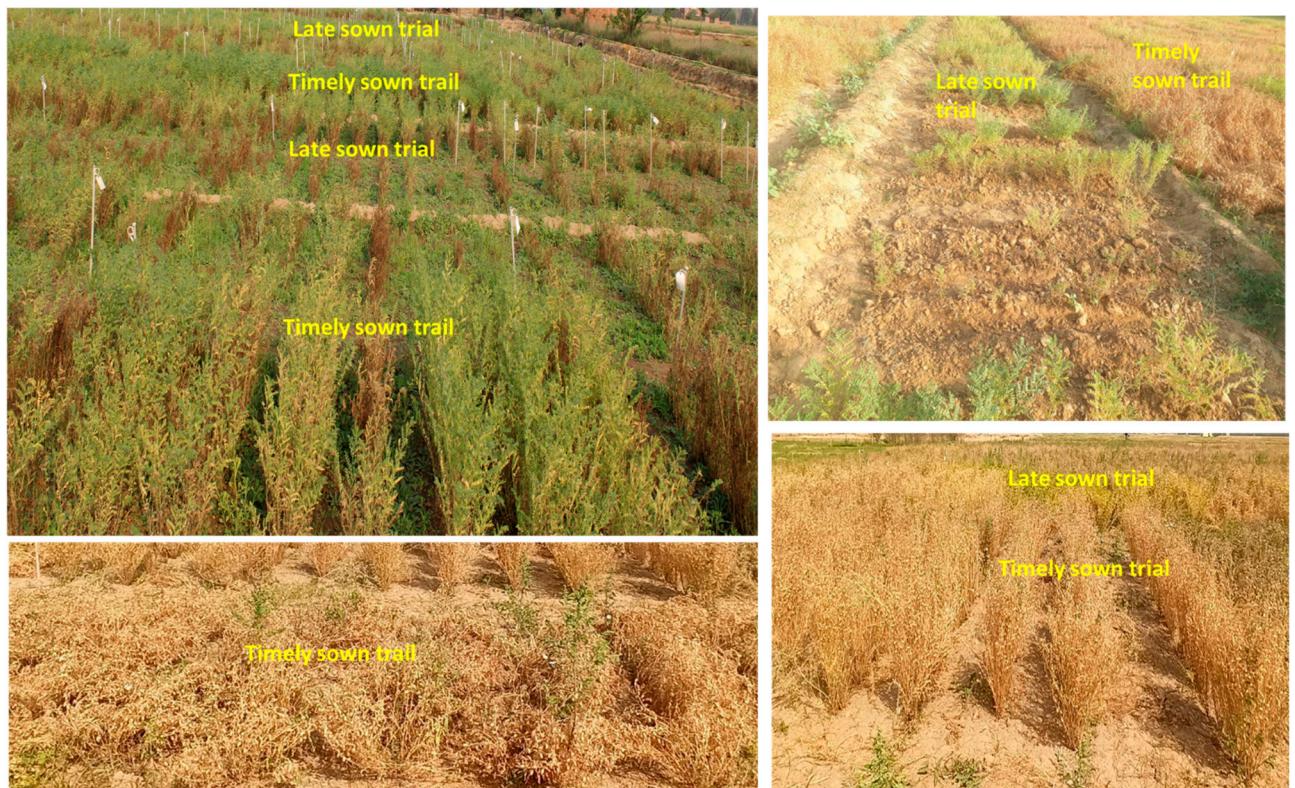

Supplementary Fig S5. (A) Comparative analysis of JG14 (G42) and ILC1932 (G39) across diverse environments (SVP = 3), (B) GGE biplot 'Env. Geno. Relationship' view for 42 genotypes, two seasons, three locations, yield per plot. Biplots: Centering = 2, SVP = 2, Scaling = 0.

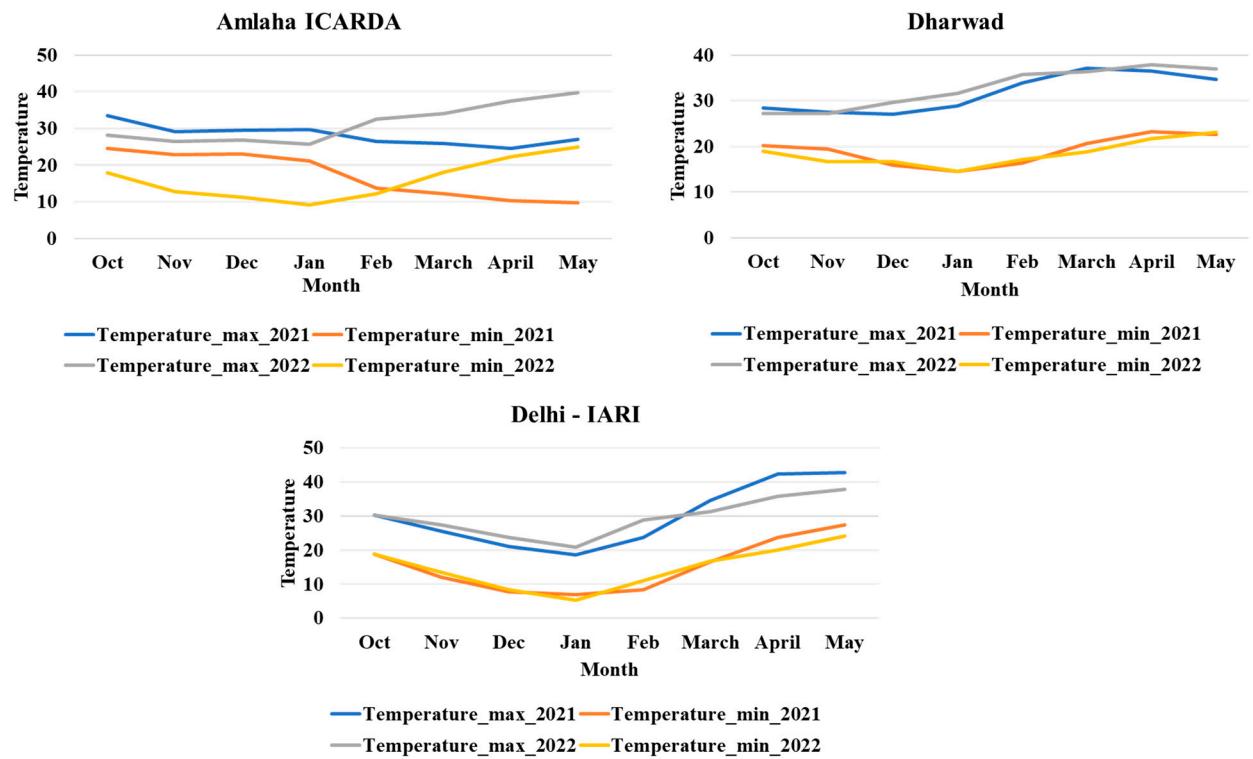

Supplementary Fig S6. (A) Genotype ranking according to performance in a specific environment (E10). (B) Ranking trial environments based on the relative performance of genotypes G1 and G2.

Supplementary Fig S7. Field pictures of the heat tolerant testing

Supplementary Fig S8. Graph of monthly average temperature of chickpea growing season of 2021 to 2023

### Supplementary tables

Supplementary table S1. List of selected genotypes used in this study with their heat susceptibility index values of individual environment.
