**Figure S1. Effect of chemokine CCL18 on catalytic properties of human tissue ACEs.**

**A-C.** Lung (A) and spleen (B-C) homogenates from patient with Gaucher’s disease (B) and normal spleen (C) were titrated with different concentration of CCL18. After equilibration, ACE activity was determined with fluorometric assay with two substrates (ZPHL and HHL). Data expressed as a % of ZPHL/HHL ratio from control (without CCL18).

**Fig. S2. Gender-specific precipitation of ACE activity from male and female sera samples.**

ACE activity was precipitated from heart homogenates of 6 males and 6 females (**A**), from lymph nodes homogenates of 10 males and 10 females (**B**) and from 27 male and 28 female sera samples (**C**) by mAbs 2D1 and 2H9, having epitopes on the N and C domains, respectively [Popova, 2021, Kozuch, 2022]. 2H9/2D1 ratios were expressed as % from mean of each tissue set. Mean values from 2-3 experiments (each made in triplicates)  $\pm$  SD. Red bars on Fig.S2 are represent homogenates of lymph node from unrelated patients (with very low ACE activity), whereas others -from patients with sarcoidosis (and relatively high ACE activity).

Table S1. **Whole exome sequencing analysis of patient S13 (LM1).**

Patients with genomic DNA were subjected to WES. Only mutations with probably and possibly damaging mutations (according to PolyPhen-2 HVAR score) were included. **Blue**-low blood ACE (< 50% of mean value). **Red**-high blood ACE (>400% of mean value).

Table S4. **Damaging mutations, unique for Index Patient S13** (Attached Below)

**Table S2. All damaging mutations in the genes of Index Patient S13**

Genomic DNA from Patient S13 was subjected to WES. Included are damaging mutations: 103 stopgain mutations, 641 nonsense/indels mutations, 12 stoploss mutations, and 1381 damaging missense mutations arranged according to ascending PolyPhen-2, HVAR scores. There are two prediction classifications **D** (Probably damaging, score $\geq$ 0.909), **P** (possibly damaging, 0.446 $\leq$ score $\leq$ 0.908). Mutations of interest are highlighted in yellow – ABO (rs8176743), ADAMTSL4 (rs199599791), NOD2 (rs2066844), SAA1 (rs1136747), and SMPD1 (rs550365194).

**Table S4. Damaging mutations, unique for Index Patient S13**

267 damaging mutations according to HVAR scores identified in patient S13, potential contributors to a unique ACE phenotype. These mutations were identified by subtracting damaging mutations common to a control group of 16 patients without the unique ACE phenotype specific for Patient S13 (Table S3) from the damaging mutations found in patient S13 (Table S2). There are two prediction classifications **D** (Probably damaging, score $\geq$ 0.909), **P** (possibly damaging, 0.446 $\leq$ score $\leq$ 0.908).
