C – control samples (non-fermented); L – lentil sobtained from pure stands; LR – lentils obtained from relay incorporated with winter rye; SM – submerged conditions (lentils/water ratio 1:5, w/w ); SS – submerged conditions (lentils/water ratio 1:1, w/w ); SMF – fermented under submerged conditions; SSF – fermented under solid-state conditions; 24, 48 – duration of fermentation (in hours).

<sup>a-b</sup> Mean values denoted with different letters indicate significantly different values between the different lentil sample groups (LR and L) with the same treatment (SM, SF, SMF24, SMF48, SSF24, SSF48); <sup>A-E</sup> Mean values denoted with different letters indicate significantly different values between different treatment (SM, SF, SMF24, SMF48, SSF24, SSF48) within the same group (LR or L). Results are statistically significant when p ≤ 0.05. nd – not detected.
