

**B**

**Raw data for the Western blotting analysis.** RTG-2 cells were transfected with miRNA-146a-3p mimic or NC mimic and miRNA-146a-3p inhibitor or NC inhibitor for 24 h. Then, the cells were lysed and the target protein bands were detected using the corresponding antibody. The primary antibodies were anti-WNT3a (A), anti-CCND1(B), and anti- $\beta$  tubulin (C).
