Sclerosis is a medical condition characterized by the hardening of tissues and can affect organs, the nervous system, and the vascular system. The newly launched journal *Sclerosis* (ISSN 2813-3064) will focus on all aspects of sclerosis and related diseases, from the most prevalent, such as multiple sclerosis, to less common types, such as systemic sclerosis and tuberous sclerosis [1].

Sclerosis welcomes high-quality submissions, including original research articles, review papers, and communications. We would like to extend a warm welcome to the Editor-in-Chief, Dr. Bradley Turner, and all members of the Editorial Board.

As with all MDPI journals, we strive to provide excellent service as well as a fast and rigorous peer-review process. We hope that you will join us in developing this new journal into a leading international and interdisciplinary open access platform for the sharing of research within the academic community.

Conflicts of Interest: The author declares no conflict of interest.
