## Genetics and Genomics of Female Reproduction

Guest Editors:

**Dr. David Keefe**

Department of OB-GYN,  
Grossman School of Medicine,  
New York University, 550 First  
Avenue NBV 9N1-F, New York, NY  
10016, USA

**Dr. Ashley Wiltshire**

Department of Obstetrics and  
Gynecology, Columbia University,  
New York, NY, USA

Deadline for manuscript  
submissions:

**15 August 2024**

### Message from the Guest Editors

Dear Colleagues,

Infertility afflicts one in ten women and increases in frequency as women age. Advances in genetics and genomics have made remarkable strides in clarifying the underpinnings of many cases of female infertility. A plethora of breakthrough technologies in single-cell genomic analysis now enable detection of viable among the more numerous nonviable embryos. Genomics is also shedding new light on uterine pathology. Technological breakthroughs in the genetics and genomics of female reproductive function are paving the way not only for novel molecular genetic diagnostics, but also for treatment. Still fraught with ethical and technological challenges, early research on germ line gene engineering is beginning to show promise.

This Special Issue aims to provide a snapshot of some of the most cutting-edge research on the genetics and genomics of female reproduction, with a focus on translational efforts. These contributions illustrate the “awesome power of genetics” when applied to human disease. This issue includes both original research papers and critical reviews in order to provide an update which is both comprehensive and current.

## Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

**Journal Rank:** JCR - Q2 (*Genetics & Heredity*) / CiteScore - Q2 (*Genetics*)
