Pseudomonas aeruginosa: Pathogenicity, Drug Resistance Mechanisms and Interaction with the Host

Guest Editor:

Prof. Dr. Haihua Liang

School of Medicine, Southern University of Science and Technology, Shenzhen, China

Deadline for manuscript submissions:

15 August 2024

Message from the Guest Editor

Pseudomonas aeruginosa (P. aeruginosa) is a Gramnegative opportunistic pathogen that infects patients with cystic fibrosis, burn wounds, immunodeficiency, chronic obstructive pulmonary disorder (COPD), cancer, and severe infections requiring ventilation, such as COVID-19. P. aeruginosa is also a model bacterium widely used in all biological areas.

Department of Molecular Systems Biology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC,

PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology (medical))
