Supplementary Materials: The following is supporting information.

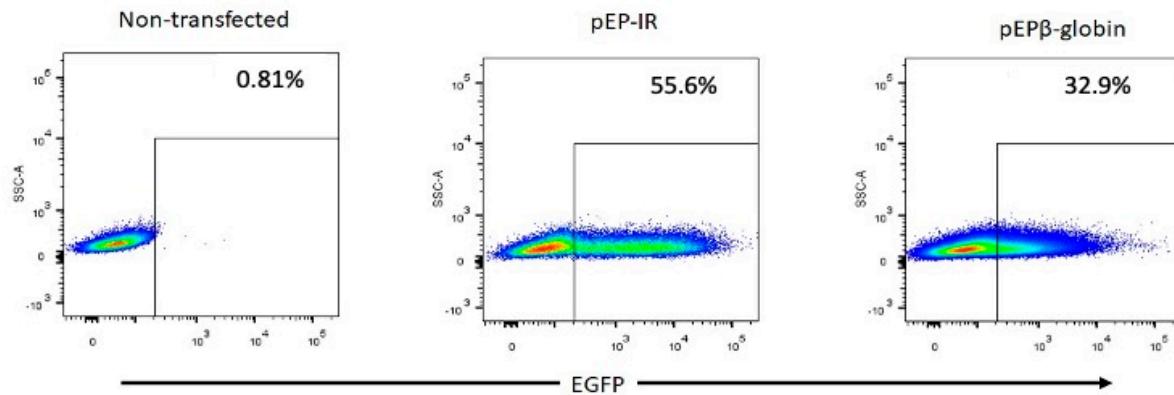

Figure S1. Flow cytometry of transfection efficiencies. CD34+ cells, non-transfected, transfected with plasmid pEP-IR and transfected with plasmid pEP β -globin.

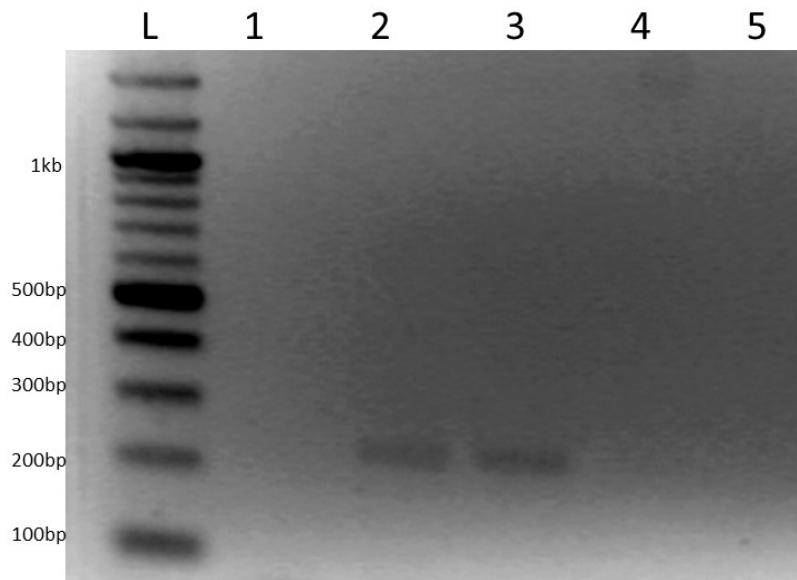

Figure S2. PCR test for plasmid detection in DNA from CFC colony cells. L. 100bp DNA ladder NEB New England; 1. CFC colony cells transfected with pEP-IR, non-fluorescent; 2. CFC colony cells transfected with pEP-IR, Fluorescent; 3. CFC colony cells transfected with pEP β -globin, Fluorescent; 4 CFC colony cells transfected with pEP β -globin, non-Fluorescent; 5. Empty slot.

Table S1. Nucleofections to determine transfection efficiencies for transfections into CD34+ cells. Nucleo 1 to 5 are the nucleofections carried out, along with the respective data –columns for non-transfected CD34+ cells, CD34+ cells transfected with plasmid pEP-IR and CD34+ cells transfected with pEP β -globin. The three last rows provide data from statistical analysis.
