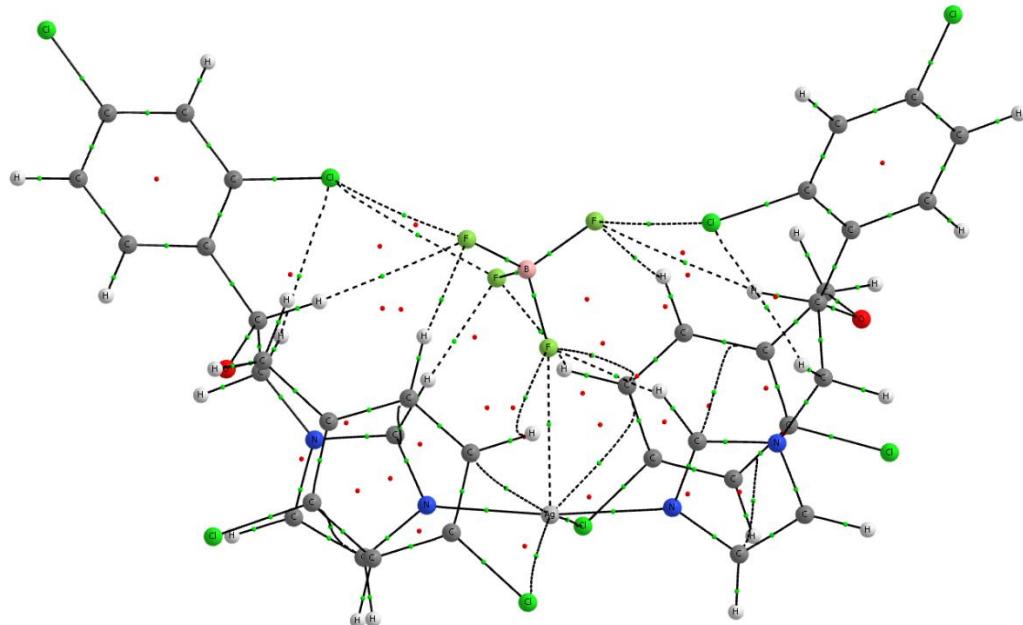

Figure S1. Molecular graph of $\text{Ag}(\text{MCZ})_2\text{BF}_4$; green dots – bond critical points, red dots – ring critical points, cage critical points are omitted for picture clarity.

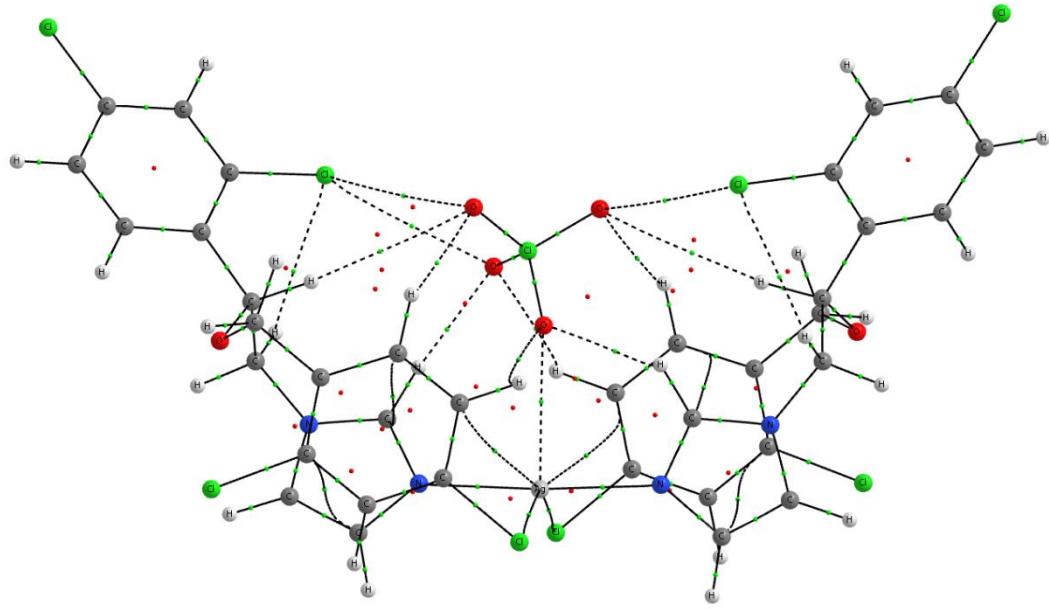

Figure S2. Molecular graph of $\text{Ag}(\text{MCZ})_2\text{ClO}_4$; green dots – bond critical points, red dots – ring critical points, cage critical points are omitted for picture clarity.

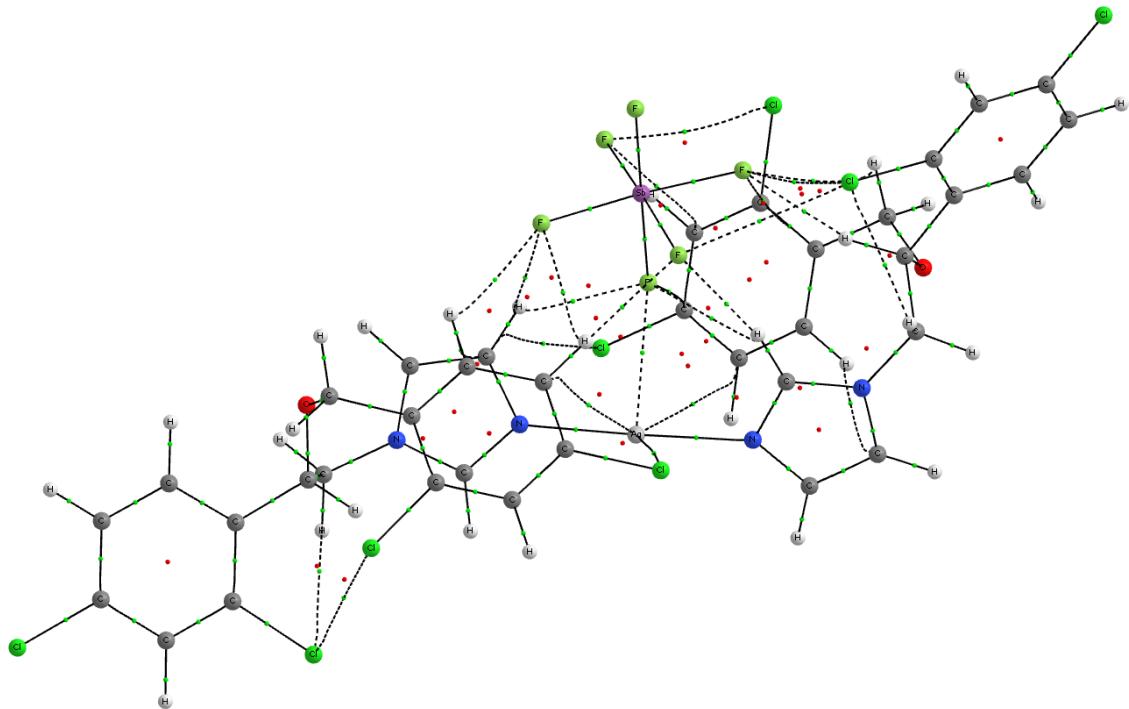

Figure S3. Molecular graph of $\text{Ag}(\text{MCZ})_2\text{SbF}_6$; green dots – bond critical points, red dots – ring critical points, cage critical points are omitted for picture clarity.

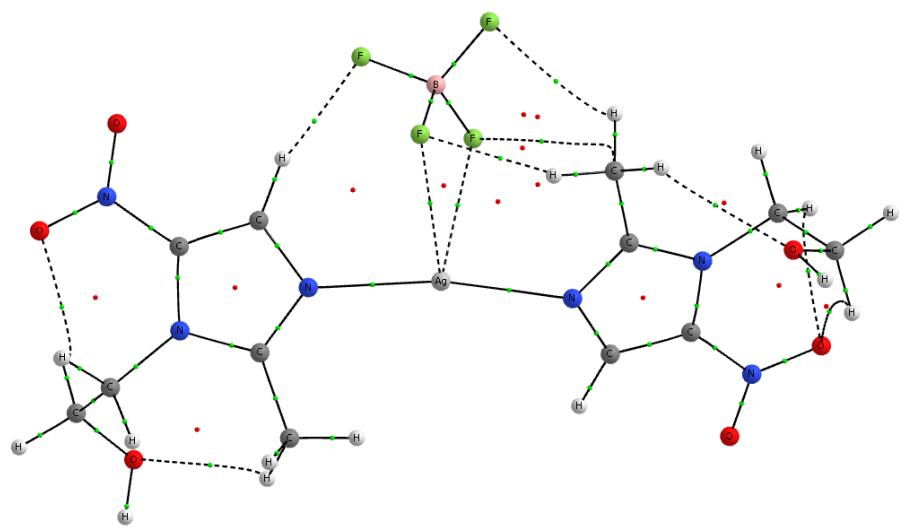

Figure S4. Molecular graph of $\text{Ag}(\text{MTZ})_2\text{BF}_4$; green dots – bond critical points, red dots – ring critical points, cage critical points are omitted for picture clarity.

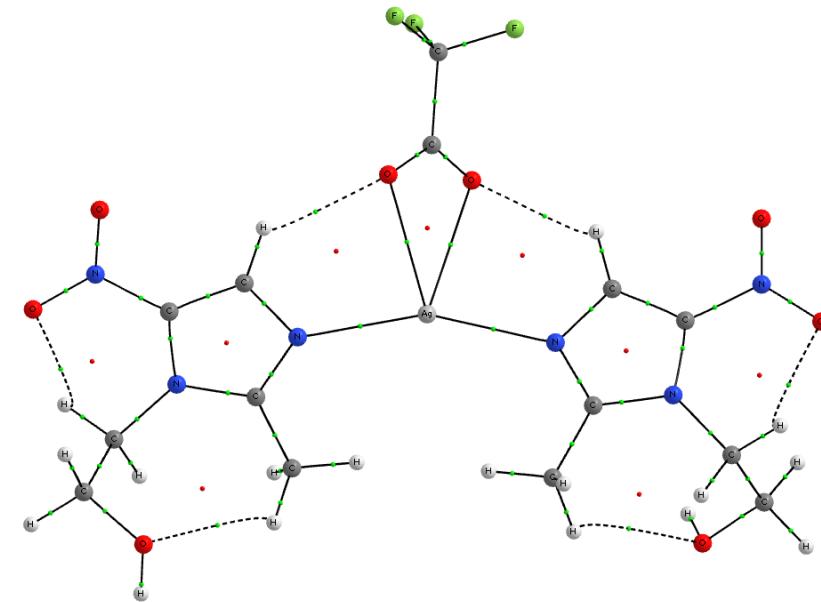

Figure S5. Molecular graph of $\text{Ag}(\text{MTZ})_2\text{CF}_3\text{CO}_2$; green dots – bond critical points, red dots – ring critical points, cage critical points are omitted for picture clarity.

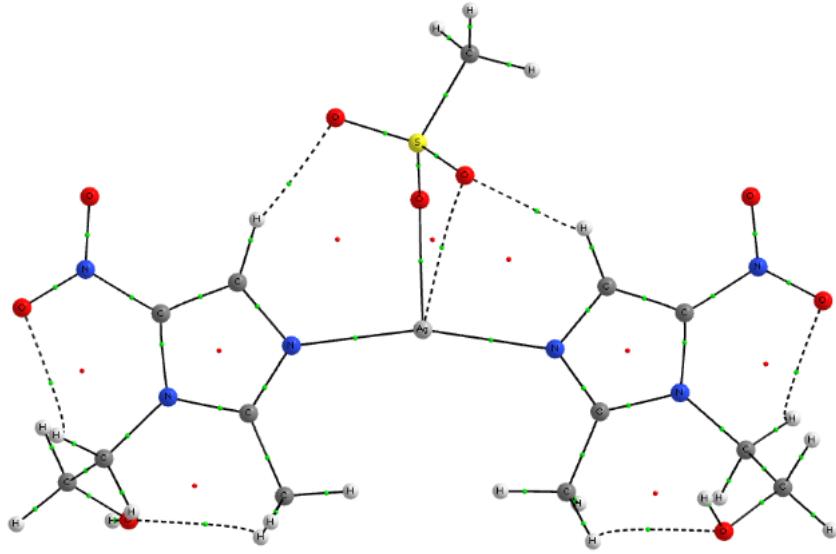

Figure S6. Molecular graph of $\text{Ag}(\text{MTZ})_2\text{CH}_3\text{SO}_3$; green dots – bond critical points, red dots – ring critical points, cage critical points are omitted for picture clarity.

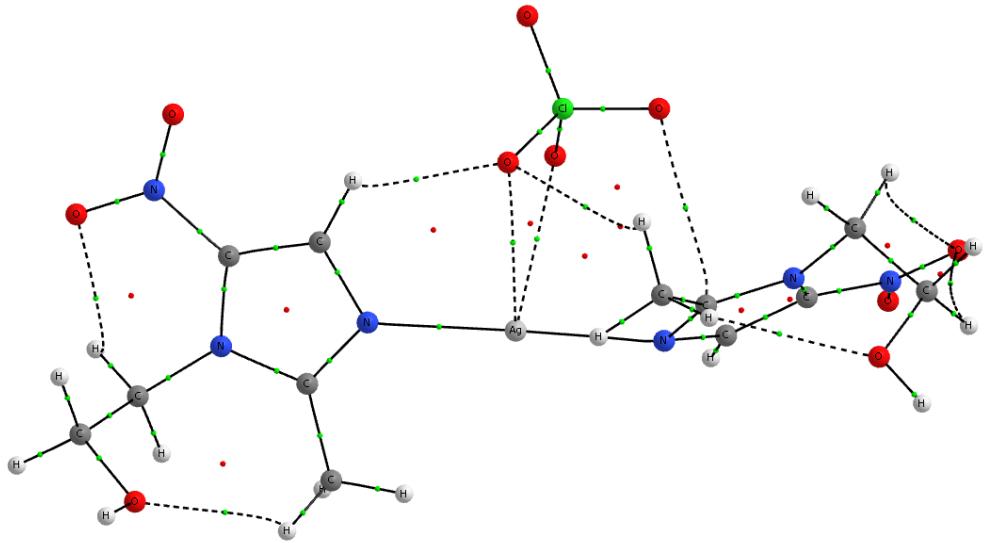

Figure S7. Molecular graph of $\text{Ag}(\text{MTZ})_2\text{ClO}_4$; green dots – bond critical points, red dots – ring critical points, cage critical points are omitted for picture clarity.

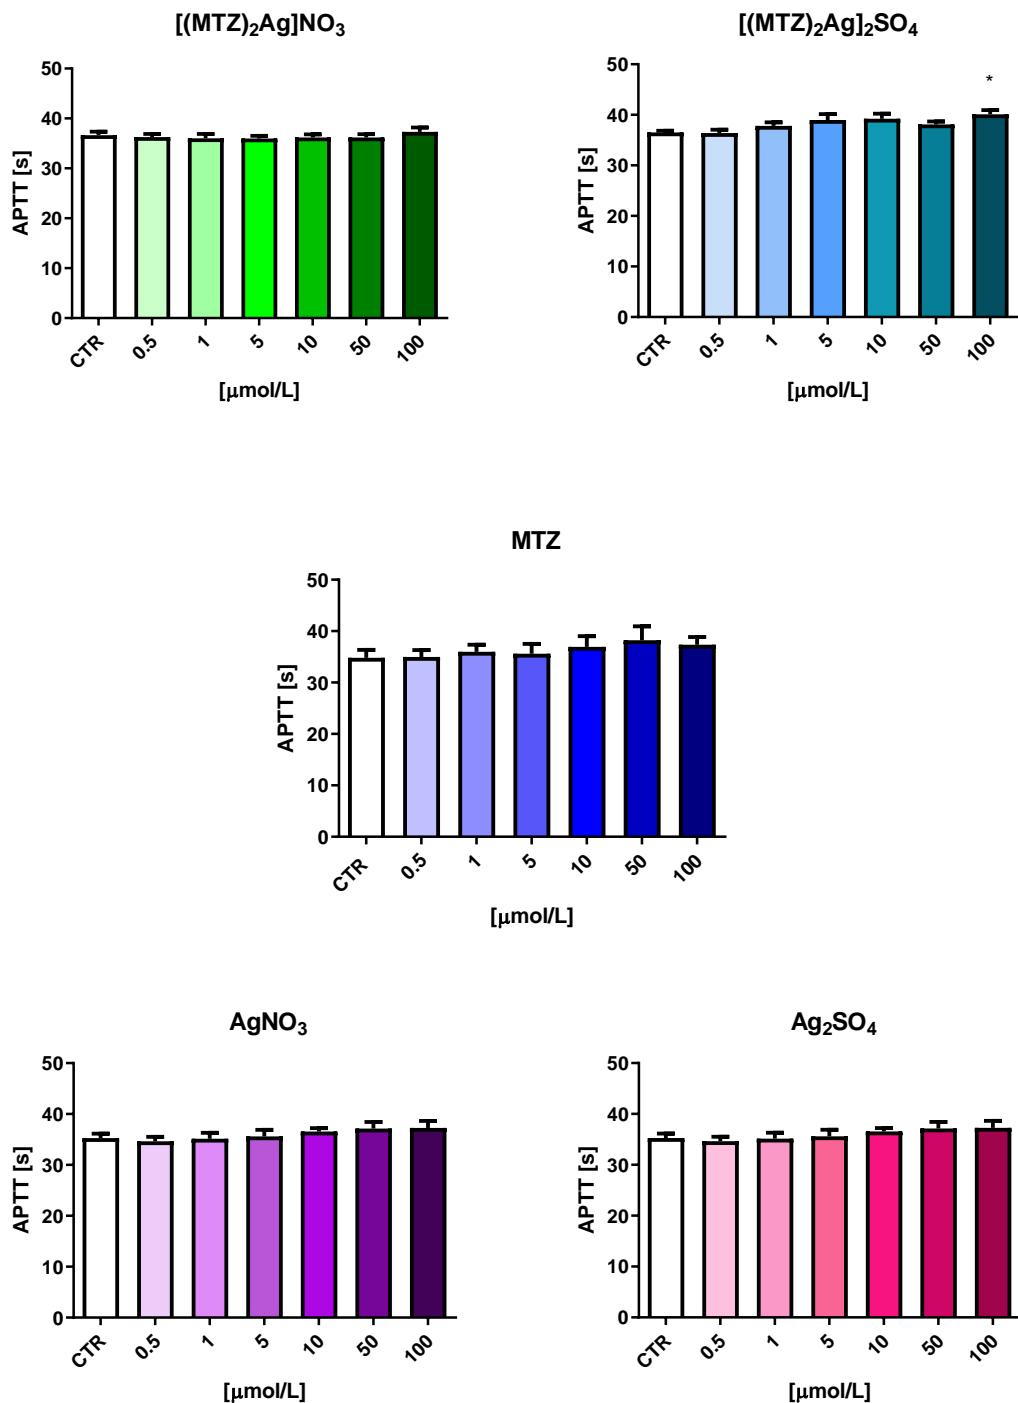

Figure S8. The influence of the tested silver(I) metronidazole complexes ($[(MTZ)_2Ag]NO_3$ and $[(MTZ)_2AgSO_4]$) and ligands (MTZ - metronidazole; $AgNO_3$; Ag_2SO_4) on activated partial thromboplastin time (reference range: 26.7-40.0 s). The results are presented as mean \pm standard deviation ($n = 5$); * $p < 0.05$ there is a statistically significant difference compared to the control sample (CTR).

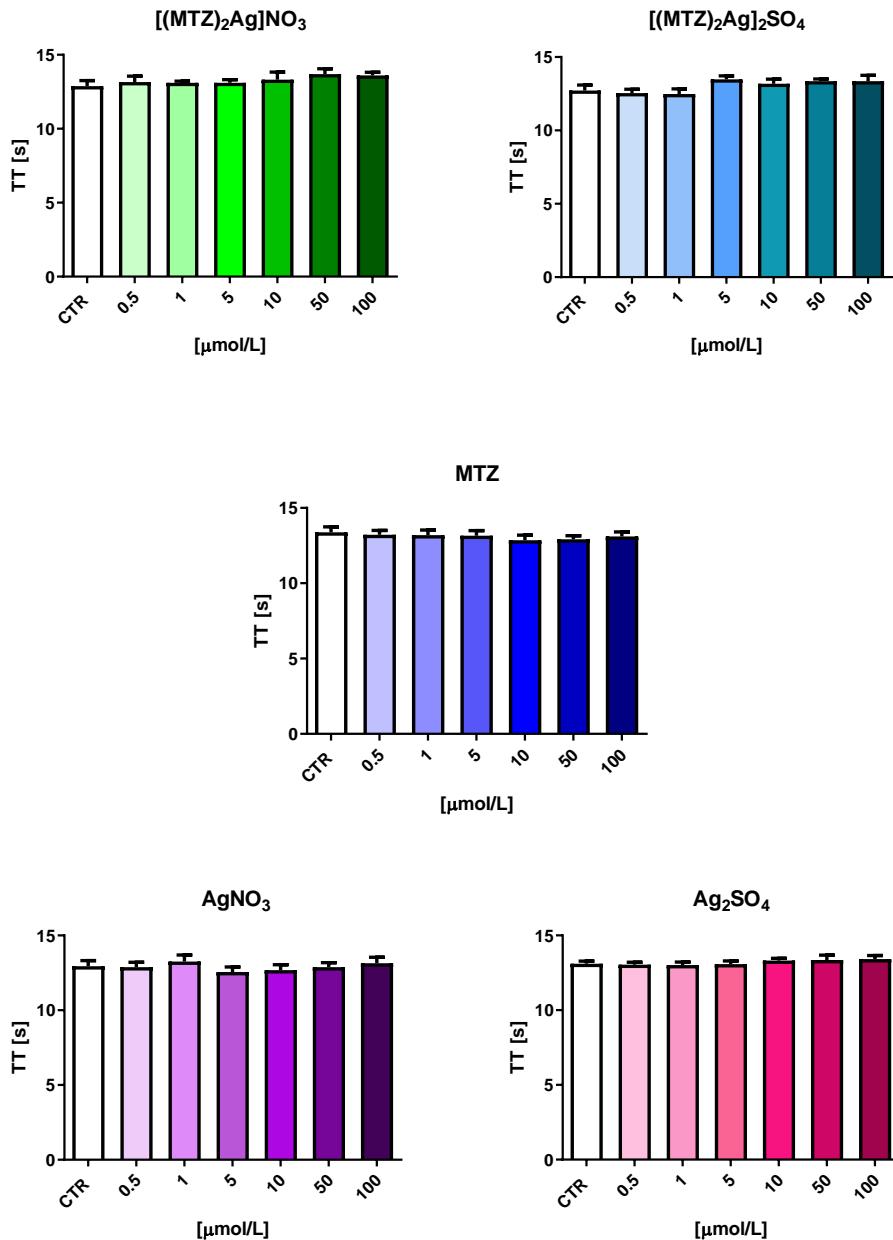

Figure S9. The influence of the tested silver(I) metronidazole complexes ($[(\text{MTZ})_2\text{Ag}]\text{NO}_3$ and $[(\text{MTZ})_2\text{Ag}]\text{SO}_4$) and ligands (MTZ - metronidazole; AgNO_3 ; Ag_2SO_4) on thrombin time". (reference range: 14.0-18.0 s). The results are presented as mean \pm standard deviation (n = 5); control sample (CTR).

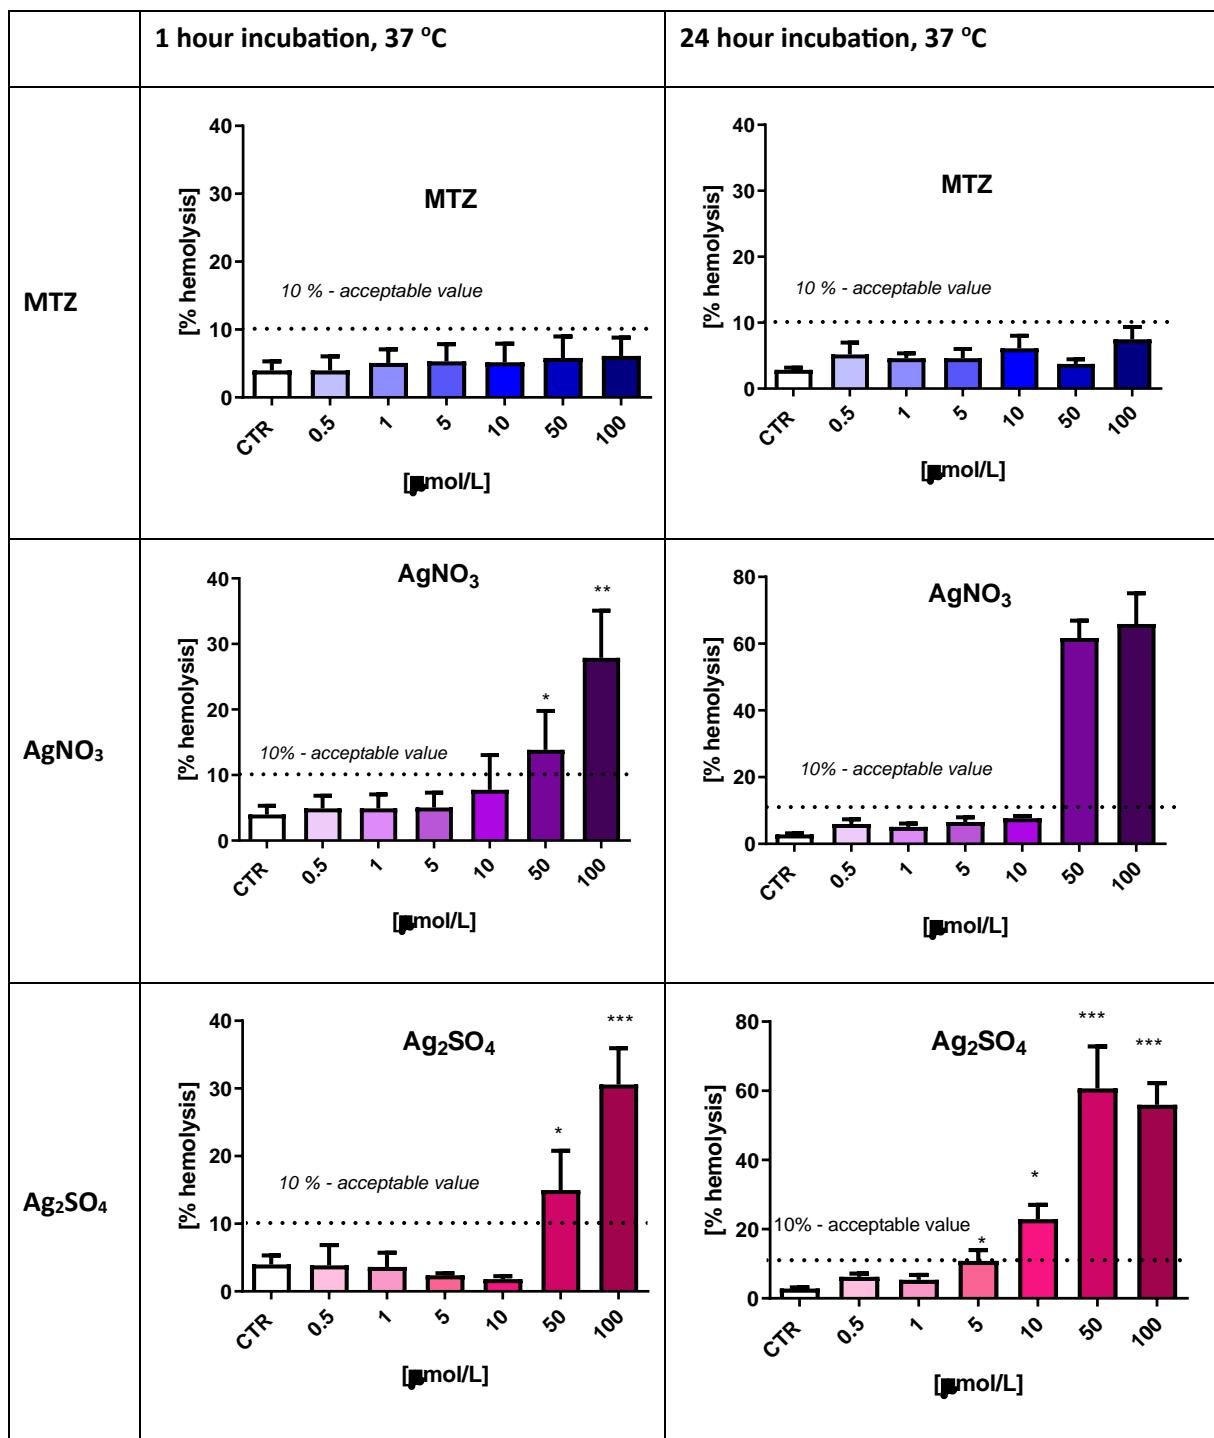

Figure S10. The effects of incubation 2 % RBC suspension with ligands (MTZ - metronidazole; AgNO₃; Ag₂SO₄) on RBC hemolysis (acceptable value of hemolysis proving the biocompatibility of the compound is 10%). The results are presented as mean ± standard deviation (n = 35); * p < 0.05, ** p < 0.01, *** p < 0.001 there is a statistically significant difference compared to the control sample (CTR).
