### Message from the Guest Editor

Dear Colleagues,

For various ophthalmic diseases, the current treatment mainly involves eyedrops and intraocular/periocular injections. However, recent advances in the development of novel therapeutic agents involves gene therapy utilizing viral vectors, stem cell therapies and miRNAs targeting different signaling pathways, which may be also applicable to ophthalmic pharmacological research. This Special Issue will provide new concepts, regimens and drugs for the treatment of various eye diseases, including retinal disorders, glaucoma and other optic neuropathies, as well as ocular surface disorders. We are looking forward to your valuable contribution to this Special Issue.

Dr. Si Hyung Lee
