Analysis of Extreme Precipitation under Climate Change

Guest Editor:

Dr. Xiaosheng Qin

School of Civil and Environmental Engineering, Nanyang Technological University, Singapore, Singapore

Deadline for manuscript submissions: **20 September 2024**

Message from the Guest Editor

Climate change is anticipated to have a profound impact on precipitation patterns worldwide. Regions already susceptible to heavy rainfall may face more frequent and severe flooding, while those accustomed to snowfall might encounter intensified and prolonged snowstorms. Moreover, alterations in atmospheric circulation patterns due to climate change could disrupt the distribution and timing of precipitation, potentially exacerbating drought conditions in certain areas and leading to shifts in seasonal precipitation patterns. These changes may carry extensive implications resource management. for water infrastructure resilience, ecosystem dynamics, and community vulnerability. Hence, this Special Issue endeavors to explore the intricate relationship between extreme precipitation events and the broader context of climate change. By delving into these themes, this Special Issue aims to advance our comprehension of extreme precipitation events within the framework of climate change, fostering interdisciplinary dialogue among researchers, policymakers, and practitioners to address these pressing concerns.

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological scientific domains and and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
