

A

B

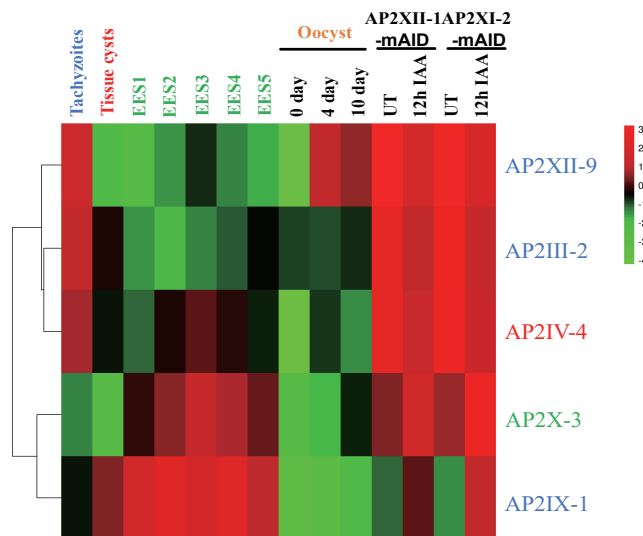

Figure S14. AP2XI-2 and AP2XII-1 jointly bind to the promoters of other ApiAP2s and regulate their transcription. (A) Venn diagram showing the overlap of ApiAP2 proteins with hits in both Cut-Tag peaks and RNA-seq after AP2XII-1 and AP2XI-2 knockdown. (B) Heatmap showing the co-regulated AP2s by AP2XI-2 and AP2XII-1, with emphasis on their expression at different life stages.
