Integrated Unit for Azo Dichlorotriazine dye Treatment: Influence of Physical treatment, Chemical Treatment, and Biological treatment with Statistical analysis of Experimental data

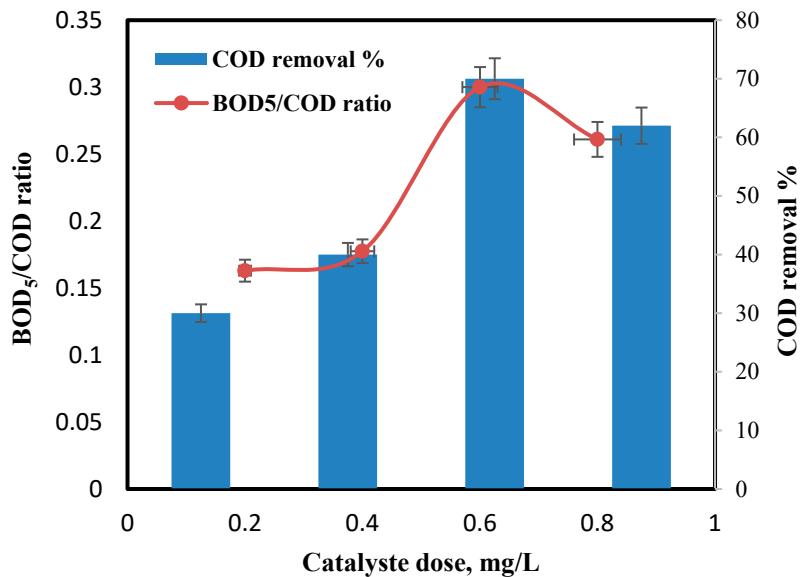

Figure S1. Effect of catalyst dose on COD removal percent and BOD₅/COD ratio in homogeneous photo- catalytic oxidation by Fenton oxidation [pH=3, reaction time = 60 min, H₂O₂ =1.5mL/L, 20 mL/min flow rate, and initial dye concentration = 0.75gm/L]

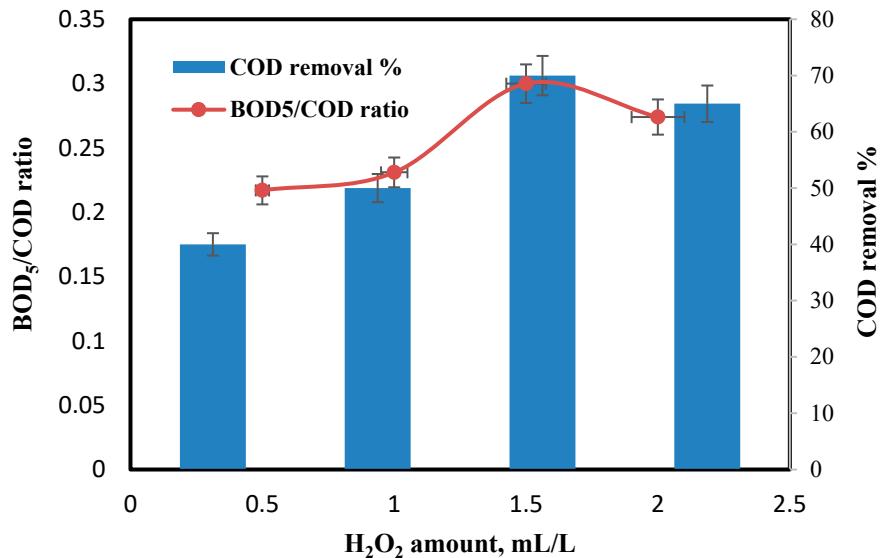

Figure S2. Effect of the hydrogen peroxide amount on COD removal percent and BOD_5/COD ratio, in the homogeneous photo-catalytic oxidation by Fenton oxidation [pH=3, catalyst dose= 0.6 gm/L, reaction time = 60 min, 20 mL/min flow rate, and initial dye concentration = 0.75 gm/L]

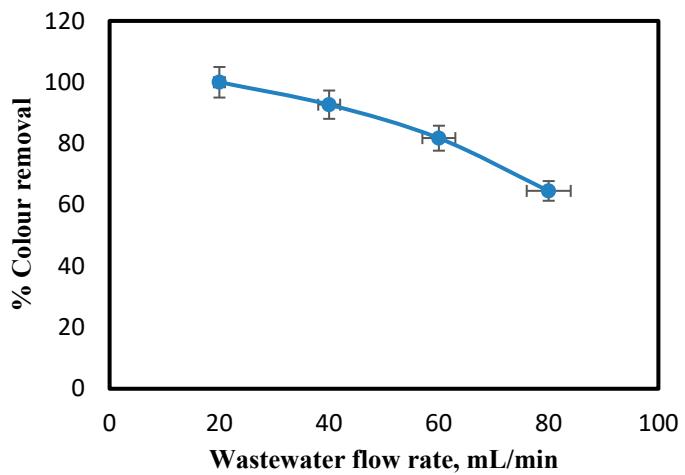

Figure S3: Effect of wastewater flow rate on the colour removal percent in homogeneous photo-catalytic oxidation by Fenton oxidation [pH=3, Catalyst dose = 0.6 gm/L, reaction time = 30 min, H_2O_2 = 1.5 mL/L, and initial dye concentration = 0.75 gm/L]

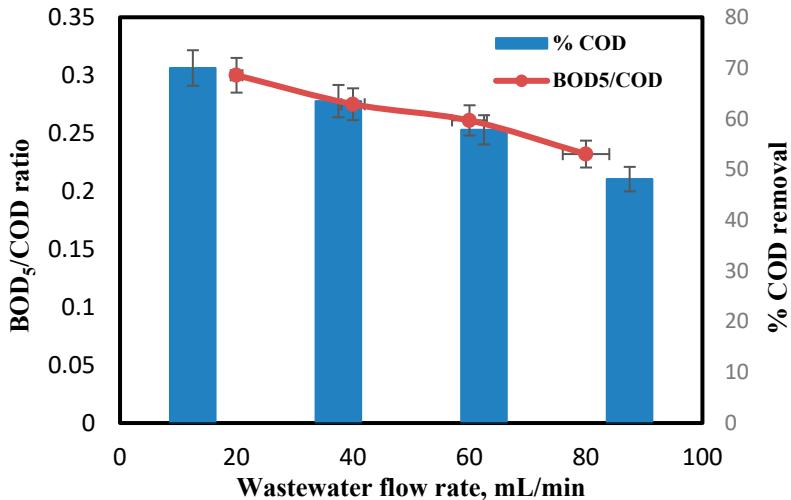

Figure S4: Effect of wastewater flow rate on the COD removal percent and BOD₅/COD ratio in homogeneous photo-catalytic oxidation by Fenton oxidation [pH=3, Catalyst dose = 0.6 gm/L, reaction time = 60 min, H₂O₂ = 1.5 mL/L, and initial dye concentration = 0.75 gm/L]

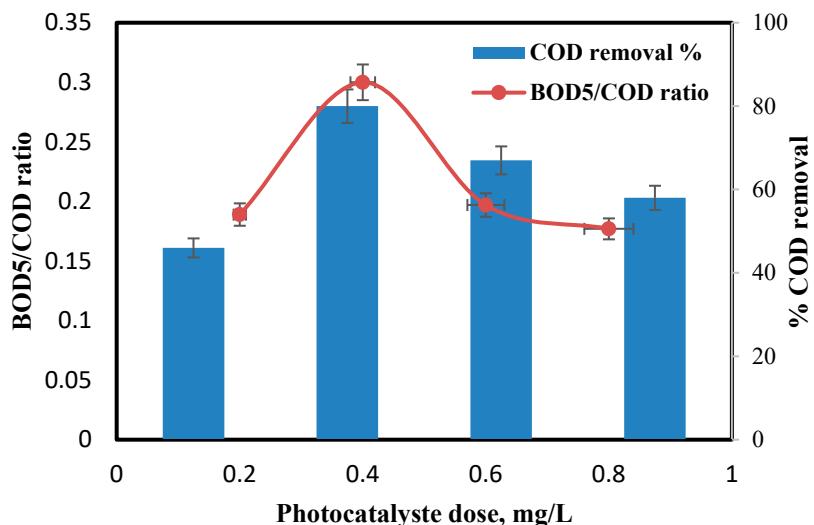

Figure S5. Effect of photocatalyst dose on COD removal % in homogeneous photo- catalytic oxidation by photo-Fenton oxidation [pH=3, reaction time = 60 minutes, H₂O₂ = 1mL/L, 20 mL/min flow rate, initial dye concentration = 0.75 gm/L, and 75-watt light intensity]

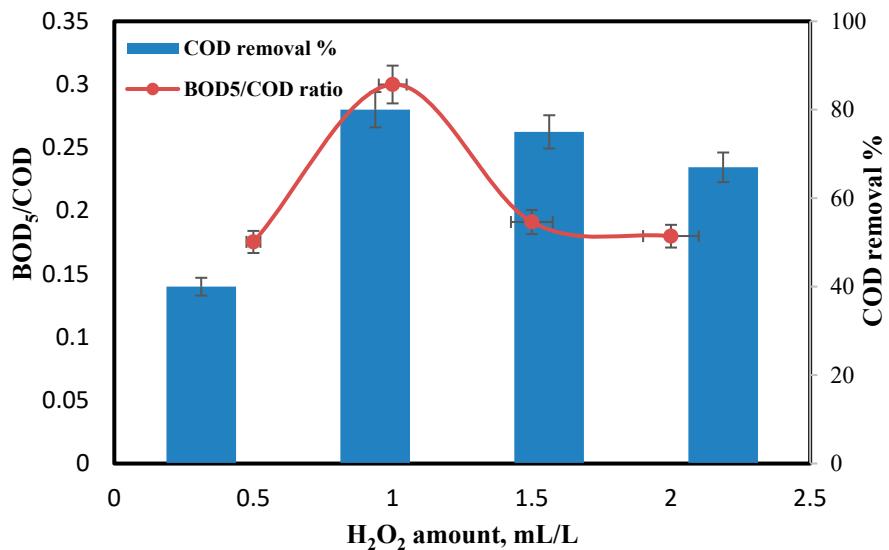

Figure S6: Effect of hydrogen peroxide amount on COD removal % in the homogeneous photo-catalytic oxidation by photo-Fenton oxidation [pH=3, Catalyst dose = 0.4 gm/L, reaction time = 60 minutes, 20 mL/min flow rate, initial dye concentration = 0.75 gm/L, and 75-watt light intensity]

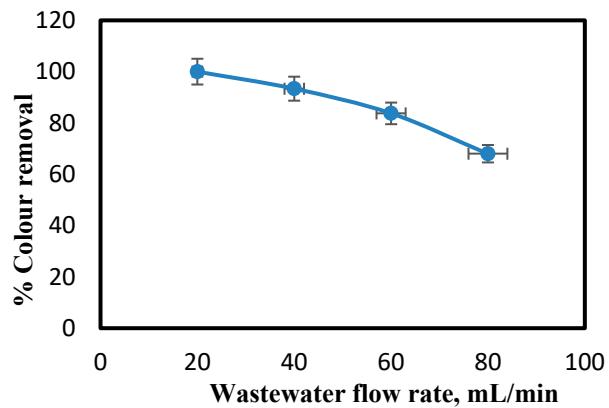

Figure S7: Effect of wastewater flow rate on the colour removal percent in homogeneous photo-catalytic oxidation by photo-Fenton oxidation [pH=3, Catalyst dose = 0.4 gm/L, reaction time = 30 min, H₂O₂=1 mL/L, 75-watt UV-intensity, and initial dye concentration = 0.75 gm/L]

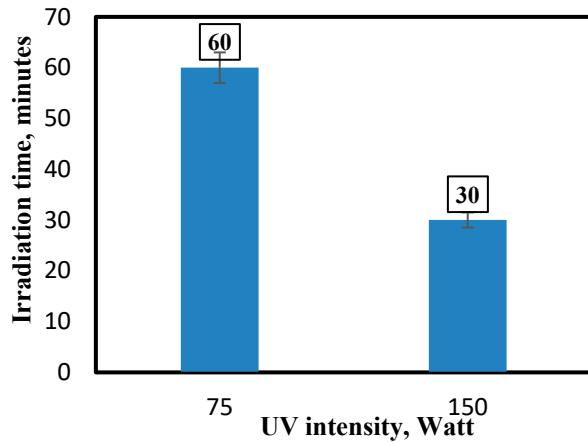

Figure S8. : Effect of the light intensity on irradiation time in the homogeneous photo-catalytic oxidation to remove 80 % of COD [pH =3, H₂O₂= 1 mL/L, Catalyst dose = 0.4 mg/L, 20 mL/min flow rate, and initial dye concentration = 0.75 gm/ L]

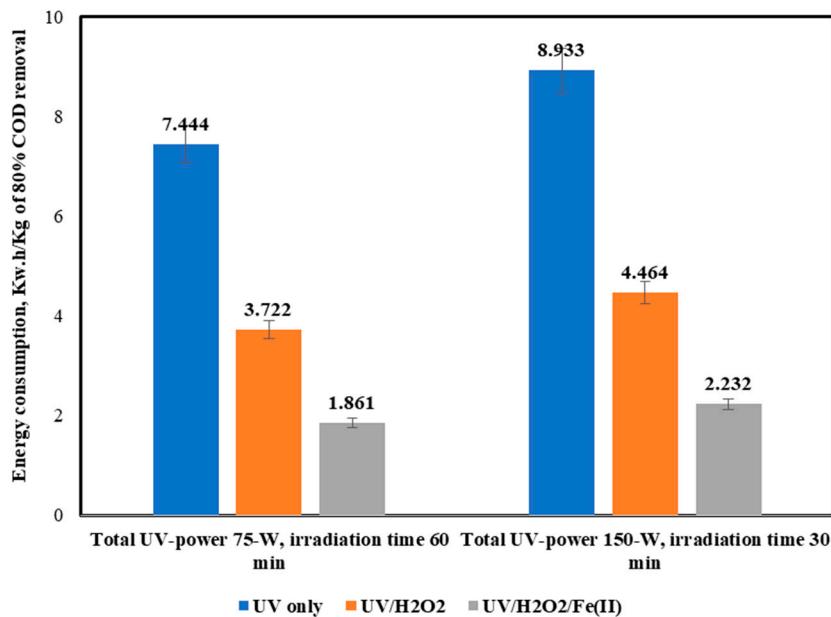

Figure S9: Specific energy consumption of 80 % COD removal for UV, UV/H₂O₂ and UV/H₂O₂/Fe (II): (Total UV-power 150-W, irradiation time 30 min) (Total UV-power 75-W, irradiation time 60 min)

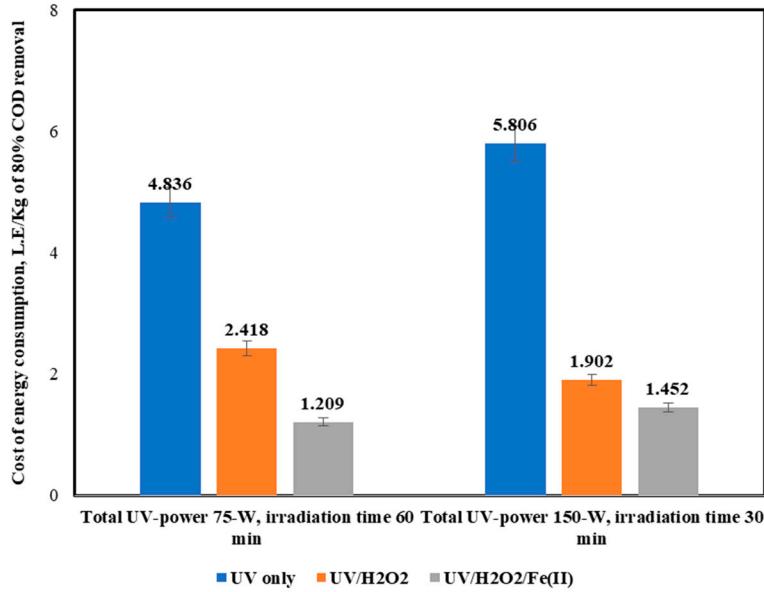

Figure S10. Cost of energy consumption of 80 % COD removal for UV, UV/H₂O₂ and UV/H₂O₂/Fe (II): (Total UV-power 75-W, irradiation time 60 min) (Total UV-power 150-W, irradiation time 30 min)

Table S1: ANOVA test outcomes for Fenton process [COD removal]

	df	SS	MS	F	Significance F
Regression	8	2722.589	340.3236	139.9673642	2.99E-06
Residual	6	14.5887	2.43145		
Total	14	2737.177			

Table S2: Values, p-values, standard error, and t-test for all coefficients [COD removal]

	Coefficients	Standard Error	t-Stat	P-value	Significance
