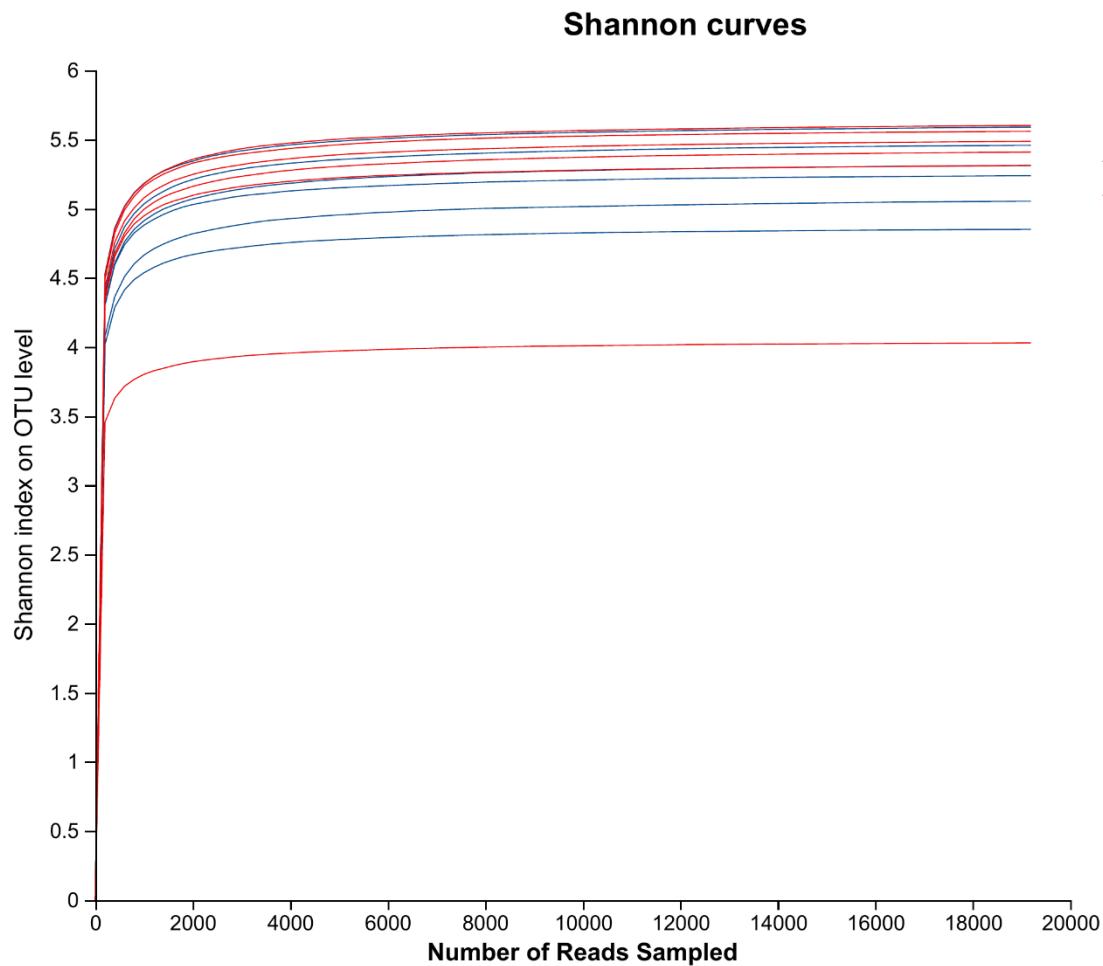

**Figure S1.** The average daily environment temperature during the experiment (°C).

**Figure S2.** The average daily drinking water temperature of difference treatments during the experiment (°C).

RTW, HW\_1, HW\_2, HW\_3 and HW\_4 mean drinking room temperature water at  $4.39 \pm 2.546^\circ\text{C}$ ,  $10.63 \pm 1.290^\circ\text{C}$ ,  $18.6 \pm 1.52^\circ\text{C}$ ,  $26.32 \pm 1.702^\circ\text{C}$ , and  $32.54 \pm 2.624^\circ\text{C}$  respectively.

**Figure S3.** The rarefaction curves of remen liquid at OTU level of fatting cattle drinking heated water or room temperature water.

All samples indicated that the diversity indices increased sharply and eventually flatten, suggesting that the sequencing data were substantial enough for reflecting the majority of microbial diversity information in the samples. RTW and HW\_2 mean drinking room temperature water at  $4.39 \pm 2.546^\circ\text{C}$  and heated water at  $18.6 \pm 1.52^\circ\text{C}$ , respectively.
