The Greuter Herbarium in Palermo: An Inventory of Its Type Specimens Available Online, with Some Thoughts on Type Terminology (Occasional Papers from the Herbarium Greuter, N° 5) †

Werner Greuter ^{1,2}¹ Botanischer Garten, 14195 Berlin, Germany; w.greuter@bgm.org² Herbarium Mediterraneum Panormitanum, 90133 Palermo, Italy[†] I take pleasure in dedicating this paper to my friend Francesco Maria Raimondo on the occasion of his 80th birthday. The single prominent contemporary botanist of his home island, he has steered the fates of the Palermo Botanical Garden as its Director for 19 years and has restored it to its flagship role among Italian botanical gardens. It is sad to note that his heirloom does no longer receive the care and admiration it deserves, and that he himself must suffer the ingratitude of many of his pupils and former friends. May he live to see his dream come true of Palermo as the reborn hub of Mediterranean plant science, a role that its central position in the area predestines it to play.

Abstract: The separately stored type herbarium of the Herbarium Greuter in Palermo is comprised of 339 sheets, corresponding to 336 specimens pertaining to 328 different names. Material from the Mediterranean area, especially Greece, predominates, followed by that from the Caribbean (Cuba) and Australia. The list includes transcribed label data and links to the digital specimen images and to the protologue texts. A new type of terminology is introduced, with the terms “first-step holotype” and “second-step holotype” designating type categories parallel to the similar terms already in use for lectotypes, and the phrase “detailed here” is used as an equivalent to “designated here” in second-step typification.

Keywords: Greuter Herbarium; Palermo; nomenclatural types; type categories; first-step typification; second-step typification

1. Introduction

In December 2008, the author donated his personal herbarium and botanical library to the Università degli Studi in Palermo to become an autonomous part of the university’s Herbarium Mediterraneum Panormitanum (PAL), kept separately under the official designation PAL-Gr. The herbarium was then estimated to comprise c. 95,000 specimens and included the historical French herbaria of Father Pierre Gave (1846–1916) and Dr. Antoine Bras (1802–1883). Subsequently, by exchange, purchase, and gift, c. 150,000 specimens have been added that are currently owned by the Foundation Herbarium Greuter and are destined to be transferred eventually to and gradually included in the PAL-Gr herbarium.

PAL-Gr hosts specimens from all over the globe, with a neat predominance of material from the Mediterranean countries (Greece in the first place) and including sizeable portions of Australian, South African, and Caribbean material, reflecting the donor’s main areas of interest. Type specimens, in so far as they were identified as such, are kept separately for their better safeguarding. This type herbarium has been digitized, and the high-resolution images are being made freely available and searchable and the high-resolution images are being made freely available and searchable via the University of Palermo Botanical Garden’s Virtual Herbarium (https://herbarium.unipa.it/herbarium_vsimpl_en_ma.asp, accessed on 6 March 2024).

2. Material and Methods

This paper lists the contents of the PAL-Gr type herbarium. The list provides the following information: (1) the name typified, with reference to its place of valid publication, and, when the protologue is available online, a link (URL) to it; protogues that could not be traced on the internet have been digitized anew and can be similarly accessed through an apposite link; (2) a limited number of synonyms, especially when the currently accepted name differs from the one being typified; (3) the kind of type (such as holotype, neotype, etc.); (4) the PAL-Gr accession number; (5) the country of origin of each specimen, followed, between quotation marks, by the collecting-site data as they appear on the label; (6) the collection date, collector name, and collecting number; and (7) the whereabouts and status of any duplicates of which the location is known.

3. Discussion

Type category terms. The International Code of Nomenclature, in its current edition (Turland & al. 2018 [1]; hereafter the *Code*), recognizes and defines the following type categories: holotype, syntype, lectotype, paratype, neotype, and epitype, plus the duplicates of each of these types, using the prefix “iso-”. Paratypes having no immediate relevance for nomenclatural purposes are not taken into consideration, nor even mentioned, in the present inventory.

The system of type categories thus defined is, in a general way, consistent and has been working in a satisfactory way for many years and through several successive editions of the *Code*. There is, however, one major illogicality embedded in it. The types of various categories, as defined in Art. 9, all consist of one element: a single specimen (or sometimes illustration). However, as stated in Art. 40.2, a type may also consist of more than one specimen, provided they all belong to the same gathering. That provision applies in the case of names published from 1958 onward, when an indication of the type became a prerequisite for the valid publication of names of new genera and infrageneric taxa. However, even before 1958, cases abound in which reference to multiple specimens of a single gathering is referred to in a protologue, and these specimen runs have then been generally (if inaccurately) accepted as constituting the holotype.

Analogous situations frequently arise with types of other categories, but these are explicitly covered in Art. 9.17. The *Code*, in Art. 9 Ex. 14, in such cases uses the phrase “first-step” lectotype for the multiple-specimen “type” initially designated and permits subsequent selection of a “second-step” type from among the elements of the “first-step” [lecto-]type. This introduces a disparity of treatment between holotypes and other type categories, in so far as with the former, when the original type consists of more than one specimen, all of these are considered to be syntypes (Art. 40 Note 1). As there is no provision parallel to Art. 9.17, restricting subsequent lectotype designation to one of these syntypes, other isosyntypes, even if not seen or cited by the original author, are under Art. 9.12, eligible as types on equal footing with the syntypes proper.

One of the purposes of the following list has been to establish the correct categories of the types concerned. Surprisingly, it turned out that close to one-third of the names concerned had “holotypes” consisting of more than one specimen. As a consequence, I felt it was very desirable to devise a satisfactory way to address this situation in simple and easily understood terms. I, therefore, propose to designate such non-unitary “holotypes” as “first-step holotypes” by analogy to what the *Code* has been using for lectotypes of a similar kind and, by the same analogy, to designate as “second-step holotypes” the lectotypes obtained by selecting one of the first-step holotype elements by analogy to what Art. 9.17 (and not just 9.12) provides. Also, in this kind of situation, I shall use the phrase “specified here” as a direct equivalent of “designated here” to meet the requirements of Art. 7.11. These suggestions are not covered by the provisions of the current *Code*, but they are compatible with them. If found to be useful and generally acceptable, they may hopefully be reflected in the text of some future *Code* edition (the date for submitting proposals for the next edition has unfortunately passed).

Isotype: PAL-Gr 52735—Albania, “Kolgecaj (Bajram Curri), an der Straße zwischen Kam und Kolgecaj, ca. 400 m. Serpentin,” 13 May 1960, Meyer 5609 (holotype [specified here]: JE #16669; other isotype: JE #16670).

Cerastium scaposum subsp. *peninsularum* Greuter, N. Böhling and R. Jahn in Willdenowia 32: 49. 2002 [<https://www.bgbm.org/sites/default/files/documents/w32-1Greuter+al.pdf>] (accessed on 6 March 2024)].

Holotype: PAL-Gr 13273—Greece, Crete, “Ep. Kidonia: H.-I. Akrotíri, NW-Grat des Hügels Sklócha, 430 m.ü.M., Kalk. Rasenfg. eine flache, erdgefüllte Gesteinsmulde ausfüllend, streng lokal; Zwergform mit auffällig verkürzten Btn.-Stielen,” 17 Mar 1961, Greuter 3273 (isotype: Z).

Chamaecrista lineata var. *iniasensis* (*iniasensis*) A. Barreto and Yakovlev in Novosti Sist. Vyss. Rast. 28: 93. 1991. [128079].

Isotype: PAL-Gr 128079—Cuba, “Prov. Guantánamo. Mun. Imías: Alto de Cotilla (al norte de Cajobabo), pinares y charrascos, suelo ultrabásico y laterita, 400–500 m,” 29 May 1982, Büsler & al. in HFC 47172 (holotype [specified here]: HAJB #330); other isotypes: B, HAJB #331–334 [4×], JE).

Chamaepetlace atropurpurea Boiss. [& Heldr. in Boissier, Diagn. Pl. Orient., ser. 2, 3: 47. 1856, pro syn.] ex Pančić, Fl. Princip. Serbie: 432. 1874 [6130] [=*Ptilostemon strictus* (Ten.) Greuter].

Isolectotype: PAL-Gr 6130—Serbia, “In dumetis Neresina Serb. austr.” Aug 1872, Pančić (lectotype (Greuter in Boissiera 22: 79. 1973): LAU; other isolectotype: BEO?).

Chamaepetlace leptophylla Pau and Font Quer, sched. Impr. Iter Marocc. 1927: #691. 1928 (≡*Ptilostemon leptophyllus* (Pau and Font Quer) Greuter) [<https://www.e-periodica.ch/digbib/view?pid=boi-001:1973:22#130> (accessed on 6 March 2024)].

Isolectotype: PAL-Gr 6006—Morocco, “Hab. In decivibus montis Iguermalez, versus Tizzi Iffri (Atlante rhiphaeo), 1500 m alt., solo schistoso,” 24 Jun 1927, Font Quer in It. Marocc. 1927 #691 (lectotype [Greuter in Boissiera 22: 127. 1973]: G; other isolectotypes: BCN, BM, FI, LAU, MA, MPU [2×], RO, S).

Clematis elisabethae-carolae Greuter in Candollea 20: 213. 1965 [<https://www.e-periodica.ch/cntmng?pid=can-002:1965:20:242>] (accessed on 6 March 2024).

Holotype: PAL-Gr 14848—Greece, Crete, “Ep. Sfakia: Karst-Kraterlandschaft in N-Teil des Talkessels Ammudzarà ndl. ob Anòpolis, 1800 m.ü.M., Tripolitsa-Kalk. In grossen Büschchen mehrf. in sonst kahlen senkrechten Karren u. Schründen, intensiv duftend; neue Art,” 2 Jul 1962, Greuter 4848 (isotypes: ATH, G, HUJ, LD, W, Z).

Clinopodium rankiniae I. E. Méndez in Willdenowia 47: 173. 2017 [<https://doi.org/10.3372/wi.47.47209>] (accessed on 6 March 2024)].

Isotype: PAL-Gr 122003—Cuba, “Provincia Santiago de Cuba. Altiplanicie de Santa María del Loreto. Finca los Monieles, al este de la subestación eléctrica con paneles fotovoltaicos. Vegetación secundaria sobre suelos derivados de areniscas y conglomerados. Al borde de los farallones,” 1 Oct 2016, Méndez, Rifá and Regalado in HPC 12016 (holotype: HIPC; other isotypes: B, HAC, HAJB, JE, ULV).

Coccoloba berazainiae (‘berazainae’) I. Castañeda in Willdenowia 43: 319. 2013 [<https://doi.org/10.3372/wi.43.43213>] (accessed on 6 March 2024)].

Isotype: PAL-Gr 63252—Cuba, “Prov. Holguín. Municipio Moa. ‘Concesión minera Santa Teresita’ al este de Yamanigüey. Pinares y charrascales,” 31 Mar 2011, Borsch & al. 4624 (holotype: ULV [specimen shown in the protologue, Figure 1]; other isotypes: B, FR, HAJB, JE, ULV).

Colchicum cretense Greuter in Candollea 22: 246. 1967 [www.e-periodica.ch/digbib/view?pid=can-002:1967:22::172#263] (accessed on 6 March 2024)].

Holotype: PAL-Gr 17738—Greece, Crete, “Ep. Kidonia: circa refugium Vólika supra Kámphi, 1350 m. In apricis graminosisque, solo saxoso calcareo (ad 2100 m. ascendens),” 15 Oct 1966, Greuter 7738 (isotypes: ATH, B, E, FI, G, GB, K, LD, LE, M, P, S, UPA, W, hb. Zaffran).

Commersonia microphylla Benth., Fl. Austral. 1: 244. 1863 (≡*Androcalva microphylla* (Benth.) C. F. Wilkins and Whitlock 2011). [<https://www.biodiversitylibrary.org/page/26216983#page/306/mode/1up>] (accessed on 6 March 2024)].

Isotype: PAL-Gr 39667—Australia, [Western Australia, “between Moore and Murchison R’s”] (from holotype label), [Drummond VI] 98 (holotype [specified here]: K #190019; other isotypes: MEL, NSW, PERTH).

Convolvulus argyrothamnos Greuter in Bauhinia 3: 251. 1967 [https://botges.ch/bauhinia/Bauhinia_3_0243-0254.pdf] (accessed on 6 March 2024)].

Holotype: PAL-Gr 17802—Greece, Crete, “Ep. Ierapetra: in faucibus inter Christòs et Metaxochóri, 450 m. In rupium calcarearum praeruptarum sole illustrium fissuris vix accessibilibus rarissima,” 27 Oct 1966, Greuter 7802 (isotypes: E, G, LD, W).

Crepis baldaccii subsp. *carpini* Greuter in Candollea 30: 328. 1975 [www.e-periodica.ch/digbib/view?pid=can-002:1975:30::272#347] (accessed on 6 March 2024)].

Isotype: PAL-Gr 20660—Greece, “Epirus, prov. Ioannina, distr. Dhodhoni: montes Timfi, in latere boreo-orientali montis Astraka, alt. 1900–2000 m. Ad rupes calcareas praeruptas,” 21 Aug 1974, Charpin 11336, Dittrich, Greuter 12508 and von Auw (holotype: G; other isotypes: LD, UPA, W, hb. Dittrich).

Crocus boulosii Greuter in Candollea 23: 45. 1968 [<https://www.e-periodica.ch/digbib/view?pid=can-002:1968:23#66>] (accessed on 6 March 2024)].

Holotype: PAL-Gr 4055—Libya, “Marwah, Gebel Akhdar,” 23 Jan 1967, Boulos 1380 (isotypes: CAI?, K).

Cynoglossum marifolium Roxb., Fl. Ind. 2: 8. 1824 (≡*Bothriospermum marifolium* (Roxb.) DC. and A. DC. 1846) [<https://www.digitale-sammlungen.de/en/view/bsb10303028?page=22,23>] (accessed on 6 March 2024)].

Lectotype (Greuter in Fl. Medit. 25 [Spec. Iss.]: 161. 2015) [https://www.herbmedit.org/flora/FL25SI_157-166.pdf]): PAL-Gr 62676)—original watercolor drawing of *Cynoglossum marifolium* by Roxburgh (isotype: K).

Daucus conchitae Greuter in Willdenowia 8: 574. 1979 [<https://www.jstor.org/stable/3996168>] (accessed on 6 March 2024)].

Holotype: PAL-Gr 27081—Greece, “ex insula Kastellorizo (Megiste) Dodekanesi, in collibus inter planos Barpouti et Parboutti (in parte austro-occidentali insulae), alt. 50–100 m. In regione dumuletorum sempervirentium, solo lapidoso vel rupestri calcareo,” 18 Apr 1974, Greuter 11964 (isotypes: ATH, C, ERE, G, MA).

Dianthus fruticosus subsp. *sitiacus* Runemark in Bot. Not. 133: 488. 1980 [17601].

Isotype: PAL-Gr 17601—Greece, Crete, “Ep. Sitia: in insulae Psíra parte austro-occidentali, 150 m. In praeruptis rupestribus calcareis ad septentriones spectantibus frequens,” 27 Sep 1966, Greuter 7601 (holotype: E; other isotypes: K, LD, M, W).

Dianthus haematocalyx subsp. *phitosianus* Constantin. in Phyton (Horn) 39(2): 279. 1999 [https://www.zobodat.at/pdf/PHY_39_2_0277-0291.pdf (accessed on 6 March 2024)].

Second-step holotype (specified here): PAL-Gr 38797—Greece, “Nomos Viotias, Eparchia Thivon. C. 6.6 km S of Xironomi village, along the road to Aliki. An ophiolithic area W of the road. Slopes with phrygana and low sparse shrubs, stony places. Alt. c. 320–350 m. Lat. 38°12' N, Long. 23°02' E,” 22 May 1998, *Constantinidis* 7693 (first-step holotype: UPA [2x]; other isotypes: B, C, UPA).

Dianthus juniperinus subsp. *heldreichii* Greuter in Candollea 20: 187. 1965 [<https://www.e-periodica.ch/cntmng?pid=can-002:1965:20::191> (accessed on 6 March 2024)].

Isotype (holotype fragment): **PAL-Gr 1848**—Greece, Crete, “in rupe Asprokremnos dicta Sphakia [in fauce Kalous Lakkous, 2000’],” [15] July 1846, *Heldreich* [1640] (holotype: G-BOIS; other isotypes: G, G-BOIS, G-BU, FI, K [2x], WU [Halácsy, Greek hb.]).

Dianthus pulviniformis Greuter in Candollea 20: 189. 1965 (≡*Dianthus juniperinus* subsp. *pulviniformis* (Greuter) Turland in Bull. Brit. Mus. (Nat. Hist.), Bot. 22: 166. 1992) [<https://www.e-periodica.ch/cntmng?pid=can-002:1965:20::193> (accessed on 6 March 2024)].

Isotype: PAL-Gr 1847—Greece, Crete: “N. Rethymnis: cliffs N of Kria Vrisi (NW of Melabes),” 1 Jun 1964, Snogerup, *Strid and Bothmer* 20955 (holotype: LD; other isotypes: none).

Elodes acifera Greuter in Candollea 20: 215. 1965 (≡*Hypericum aciferum* (Greuter) N. K. B. Robson) [<https://www.e-periodica.ch/digbib/view?pid=can-002:1965:20#219> (accessed on 6 March 2024)].

Holotype and isotype: PAL-Gr 14669 and 14669a—Greece, Crete: “Ep. Sfakia: unterer Teil der Schlucht Dòmata wl. Aj. Rùmeli, 20–40 m.ü.M., Plattenkalk. Hfg. In Ritzen buschiger O-exp. Schluchtwände,” 5 Jun 1962, Greuter 4669 (holotype: LD; other isotypes: G, LD, W, Z).

Elytraria serpens Greuter and R. Rankin in PhytoKeys 177: 2021. [<https://phytokeys.pensoft.net/article/64764> (accessed on 6 March 2024)].

Holotype: PAL-Gr 126731—Cuba, “Prov. Villa Clara, Munic. Corralillo, entre las Cañas y el arroyo Clarita, alt. 85 m. 22°50'55'' N, 80°28'22'' W. Sabana en suelo mocarrero (con capa superficial de glomérulos ferralíticos),” 4 Mar 2019, Greuter 29687 & al. (isotypes: B, HAJB, JE, ULV).

Erysimum candicum subsp. *carpathum* Snogerup in Opera Bot. (Lund) 13: 38. 1967 [15516].

Isotype: PAL-Gr 15516—Greece: “Regio aegaea austr., insula Karpathos: in faucibus Kounoupa ad septemtriones oropedii Kato Lastos, alt. 600 m. In fissuris rupium calcarearum praeruptarum,” 23 May 1963, Greuter 5516 (holotype: LD; other isotype: Z).

Euphorbia orphanidis Boiss., Diagn. Pl. Orient., ser. 2, 4: 89. 1859 [<https://bibdigital.rjb.csic.es/viewer/10731/?offset=#page=91&viewer=picture&o=bookmark&n=0&q=> (accessed on 6 March 2024)].

Isolectotype: PAL-Gr 2772—Greece: “In m. Panassi reg. media,” Aug 1855, *Guicciardi* in Heldreich, Fl. Graec. Exs. (lectotype [designated here]: G #754289; other isolectotypes: C, G #147474, K, LD, MPU, WU).

Euphorbia rechingeri Greuter in Candollea 20: 170. 1965 (≡*Euphorbia myrsinifolia* subsp. *rechingeri* (Greuter) Aldén 1986) [<https://www.e-periodica.ch/cntmng?pid=can-002:1965:20::174>] (accessed on 6 March 2024).

Holotype: PAL-Gr 14849—Greece, Crete: “Ep. Sfakia: Hügel zwischen den Alpen Mavro Korfali u. Eklissidia am N-Fuss des Berges Pächnes, 1800–1900 m.ü.M., Kalk. Nicht selten, doch nur noch spärl. mit Früchten im Verwitterungsschutt auf schwarzem Fels; abweichend durch punktierte Kapseln, glatte Samen und Blattränder,” 3 Jul 1962, Greuter 4849 (isotypes: G, HUJ, LD, W, Z).

Euphorbia sultanhassei (‘sultan-hassei’) Strid & al. in Willdenowia 19: 63. 1989 [<https://www.jstor.org/stable/3996919>] (accessed on 6 March 2024).

Isotype: PAL-Gr 35829—Greece, Crete: “Nom. Chanion, Ep. Sfakion: Middle and lower parts of the Imbros ravine, NE of Chora Sfakion, 200–400 m. Forming loose cushions up to 1 m diam. in rock crevices. Lvs turning yellow,” 12 May 1988, Strid 26697 (holotype [to be specified]: C [2×]; other isotypes: ATH, B, E, G, LD [3×], UPA).

Exostema lucidum Borhidi and M. Fernández Fernández in Acta Bot. Hung. 35: 302. 1989. (≡*Exostema lancifolium* var. *lucidum* (Borhidi and M. Fernández) Borhidi) [<http://real-j.mtak.hu/3649/>] (accessed on 6 March 2024).

Isotype: PAL-Gr 126209—Cuba, “Prov. Holguín, Mun. Moa: Cuchillas de Moa, barranco del arroyo Jaragua cerca de la Mina Jaragua, charrascales sobre roca ultrabásica, 200 m,” 3 May 1980, Álvarez de Zayas & al. in HFC 42659 (holotype [specified here]: HAJB #453; other isotypes: B, HAJB ##454–459 [6×], JE [2×]).

Festuca armoricana Huon ex Kerguélen in Lejeunia, ser. 2, 75: 9. 1975 [9416].

Isotype: PAL-Gr 9416—France: “Hillion (France, Côtes-du-Nord), Pointe de Lermaot, sables maritimes fixés et pelouses sur falaises basses, avec *Thymus drucei*, *Dactyloctenium glomerata* et *Foeniculum vulgare*. 2n = 28,” 27 May 1972, Kerguélen in Soc. Échange Pl. Vasc. Europe Occid. Bassin Médit. #7211 (holotype [specified here]: P #748568; other isotypes: CHAPA, G, GENT, MA [2×], MICH, MSB, P #748567, SEV).

Festuca cyllenica subsp. *pindica* Markgr.-Dann. in Veröff. Geobot. Inst. ETH Stiftung Rübel Zürich 56: 160. 1976 (≡*Festuca pindica* (Markgr.-Dann.) Markgr.-Dann. 1978) [<https://www.e-periodica.ch/digbib/view?pid=gbi-002:1976:56#164>] (accessed on 6 March 2024).

5. Conclusions

The type herbarium in PAL-Gr is composed of four packages with 338 sheets, corresponding to 335 specimens, three of them of two sheets each (Code, Art. 8.3), and pertaining to 327 different names. Grouped by type categories, there are 61 holotypes (+2 fragments), 6 second-step holotypes, 236 isotypes, 3 lectotypes (+1 fragment), 17 isolectotypes, 1 neotype, 2 isoneotypes, and 1 isoepitype. Of these, 82 are here newly designated (or, in 67 cases, specified), but 22 remain unspecified first-step holotypes, as the information necessary for the specification of a second-step type is lacking.

A grouping of the type specimens (not counting duplicates) by country/region of origin reveals the large predominance of Mediterranean, principally Greek material:

Albania	7
Armenia	5
Bosnia and Herzegovina	1
Bulgaria	1
Cyprus	1
Greece	150
France	13
Israel	3
Italy	70
Libya	2
Montenegro	3
Morocco	1
Portugal	2
Serbia	3
Spain	9
Syria	1
Turkey	2
Σ Mediterranean	274
Austria	4
Germany	4
Σ Central Europe	8
Australia	13
Cuba	31
USA	1
Σ Extra-European	45
Σ Total	327

Funding: No external funding of this research was received.

Data Availability Statement: Data are contained within the article.

Acknowledgments: Rosa Rankin Rodríguez, Palermo, helped with the protologue scans and the scans of Cuban type-specimens. Natale Surano, Palermo, took charge of uploading the digital images onto the Internet. The Foundation Herbarium Greuter bore the publication costs.

Conflicts of Interest: The author declares no conflicts of interest. The funders had no role in the design of the study, in the collection, analysis, or interpretation of data, in the writing of the manuscript, or in the decision to publish the results.
