

### Supplementary figure

Exemplificative images of positive results in FIP cats. A) multifocal pyogranulomatous lesions in the omentum (Hematoxylin and eosin stain, 40X magnification); B) scattered FCoV-positive cells within the pyogranulomatous lesions (anti-FCoV immunohistochemistry, Immunoperoxidase staining). Histological and immunohistochemical details are reported at higher magnification (100X) in the inserts at the left bottom corner of each image.
