

Appendix

Table S1

Longitudinal Measurement Invariance: Chi-Square Difference Comparisons for Parent-Adolescent Relationship Qualities and Well-being

	Models Compared		
	Metric vs Configural p	Scalar vs Configural p	Scalar vs Metric p
Conflict-Mother	.85	.74	.44
Conflict -Father	.94	.99	.98
Warmth-Mother	.47	.85	.95
Warmth-Father	.93	.82	.45
Aut.sup.-Mother	.38	.17	.12
Aut.sup.-Father	.79	.23	.06
Satisfaction	.60	.84	.85
Stress	.00*	.00*	.68

Note. Aut.sup-Mother= Autonomy support mother, Aut.sup.-Father= autonomy support father. * $p < .05$.

Table S2
Testing Longitudinal Measurement Invariance for Stress

	$\Delta\chi^2$ (Δdf)	$\Delta RMSEA$	ΔCFI	ΔTLI
Stress				
Configural ¹				
Configural vs Metric	33.11(9)**	.002	.012	.008
Metric vs Scalar	7.27(9)	.002	.001	.008
Configural vs Scalar	40.38 (18)*	.000	.011	.000

Note. ¹ Added error covariances are same in both time1 and time2 models. * $p < .01$, ** $p < .001$
