

Supplementary Figures

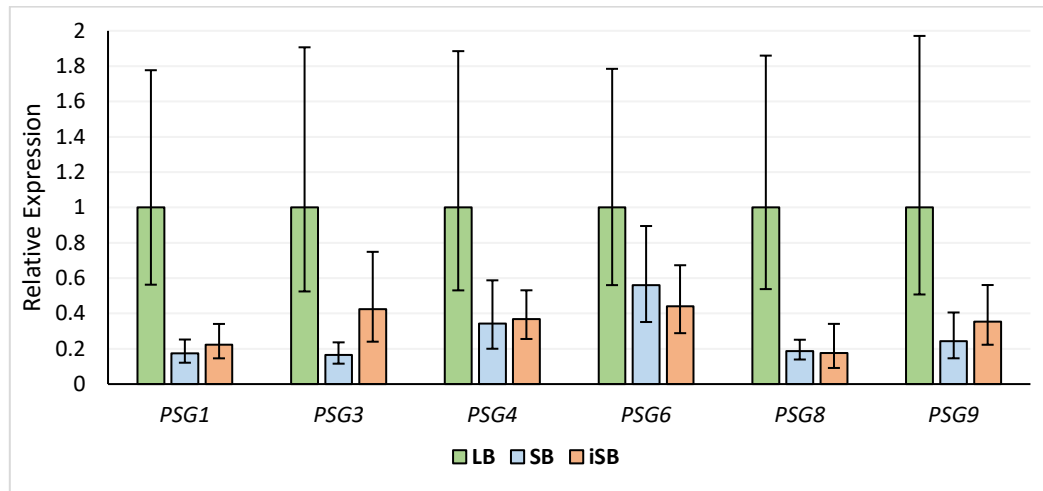

Figure S1: Relative expression of *PSG* genes in placentas from 9 live births (LB), 13 stillbirths (SB) and 12 idiopathic stillbirths (iSB), by real-time qPCR. Three housekeeping genes (*ACTB*, *TBP* and *RPLP0*) were used to normalized the results. Bars represent $2^{\Delta\Delta C_t} \pm \text{SEM}$.

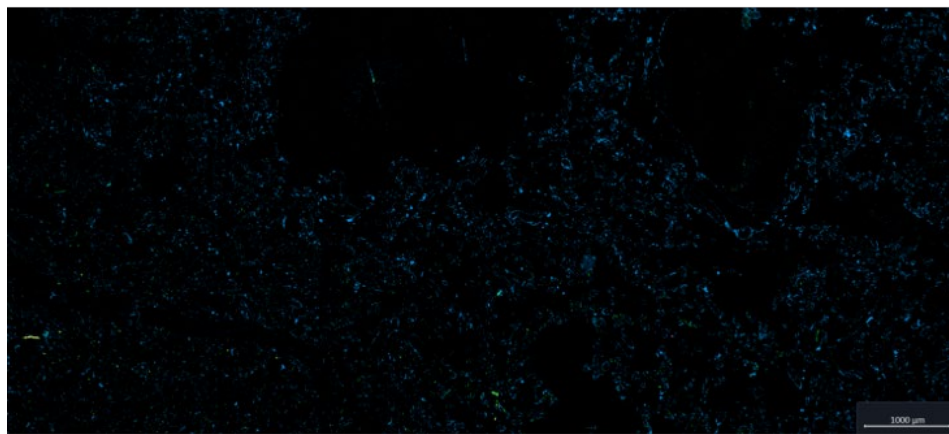

Figure S2: Negative control for Ki67, HLA-G, and COL1 immunofluorescent staining was obtained by omitting the primary antibodies; no signs of fluorescence were detected.
