

(a)

(b)

(c)

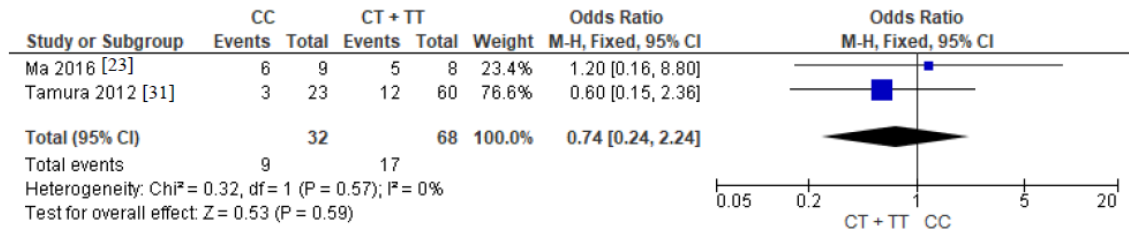

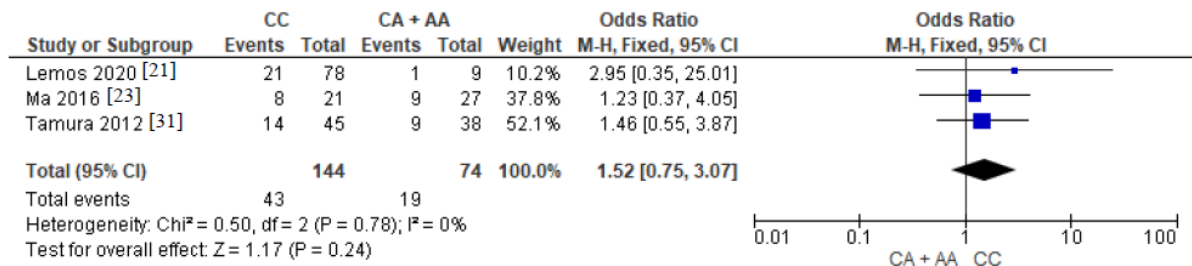

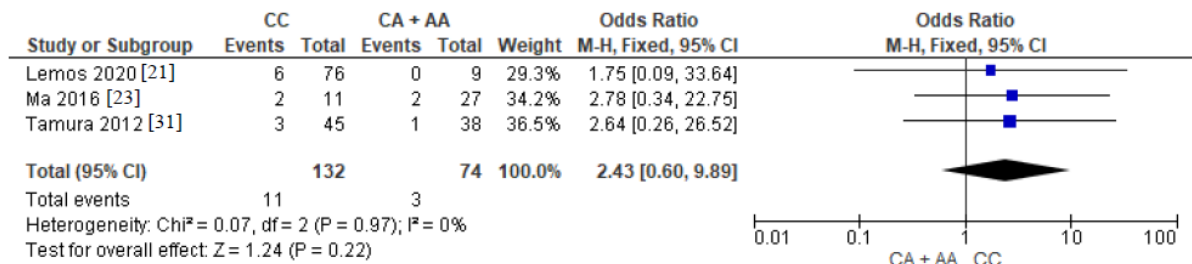

Figure S1. Forest plots of association between adenosine triphosphate-binding cassette subfamily B member 1 (*ABCB1*) gene (rs1045642) genetic variant and adverse drug reaction severity (grade 0 versus grade 0 + 1). (a) skin rash (CC versus. CT + TT); (b) diarrhea (CC versus CT + TT); and (c) liver dysfunction (CC versus CT + TT) [23,31]. CI, confidence interval; M-H, Mantel-Haenszel; I^2 , heterogeneity; χ^2 , Chi-square test for heterogeneity.

(a)

(b)

(c)

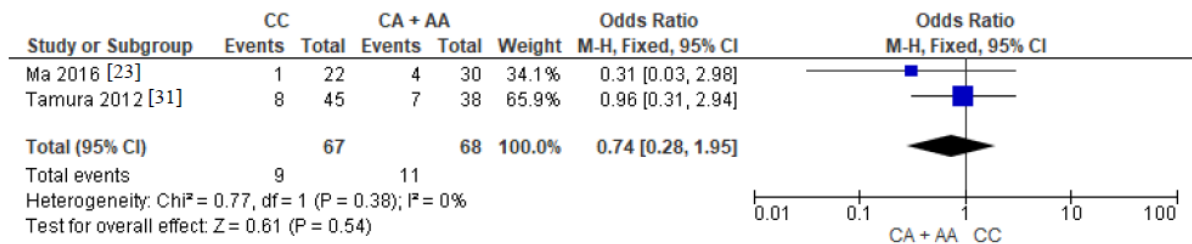

Figure S2. Forest association plots between adenosine triphosphate-binding cassette subfamily G member 2 (*ABCG2*) gene (rs2231142) genetic variant and adverse drug reaction severity (grade ≥ 2 versus 0 + 1). (a) skin rash (CC versus CA + AA); (b) diarrhea (CC versus CA + AA); and (c) liver dysfunction (CC versus CA + AA) [21,21,31]. CI, confidence interval; M-H, Mantel-Haenszel; I^2 , heterogeneity; Chi^2 , Chi-square test for heterogeneity.

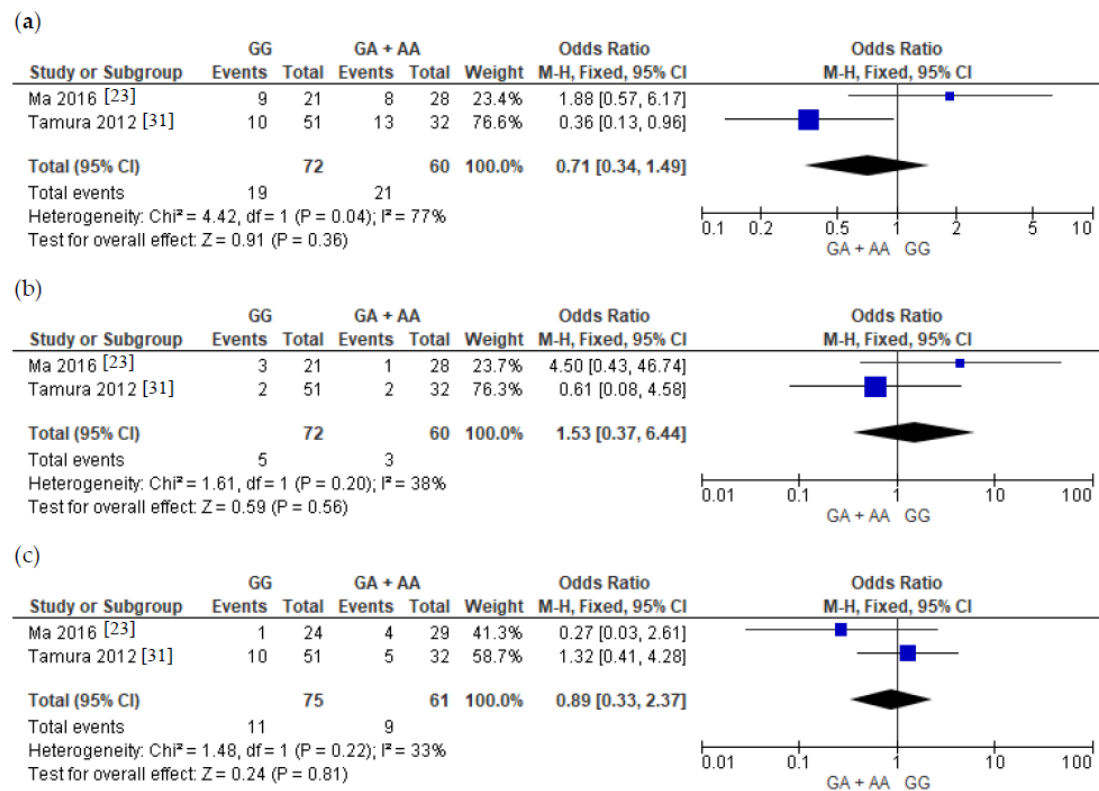

Figure S3. Forest association plots between adenosine triphosphate-binding cassette subfamily G member 2 (*ABCG2*) gene (rs2231137) genetic variant and adverse drug reaction severity (grade 1 versus grade ≥ 2). (a) skin rash (GG versus GA + AA); (b) diarrhea (GG versus GA + AA); and (c) liver dysfunction (GG versus GA + AA) [23,31]. CI, confidence interval; M-H, Mantel-Haenszel; I^2 , heterogeneity; Chi^2 , Chi-square test for heterogeneity.

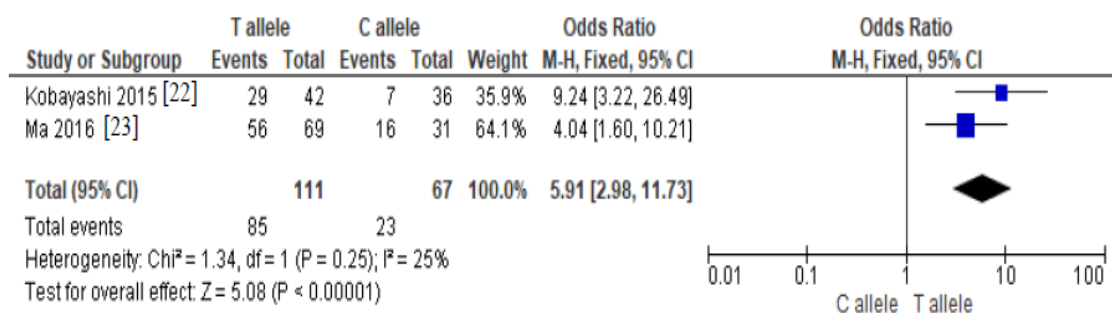

Figure S4. Forest plots of association between adenosine triphosphate-binding cassette subfamily B member 1 (*ABCB1*) gene (rs1128503) genetic variant and adverse drug reaction (grade 0 versus grade ≥ 1). (a) skin rash (T allele versus C allele) [22-23]. CI, confidence interval; M-H, Mantel-Haenszel; I^2 , heterogeneity; Chi^2 , Chi-square test for heterogeneity.

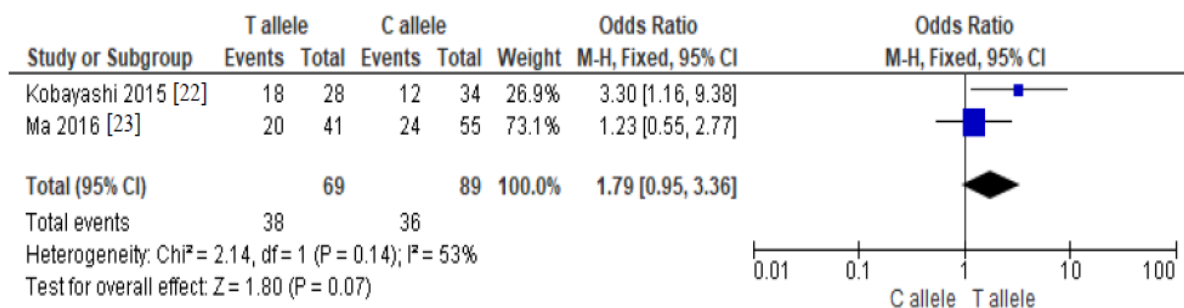

Figure S5. Forest plots of association between adenosine triphosphate-binding cassette subfamily B member 1 (*ABCB1*) gene (rs1045642) genetic variant and adverse drug reaction (grade 0 versus grade ≥ 1) (a) skin rash (T allele versus C allele) [22-23]. CI, confidence interval; M-H, Mentel-Haenszel; I^2 , heterogeneity; χ^2 , Chi-square test for heterogeneity.

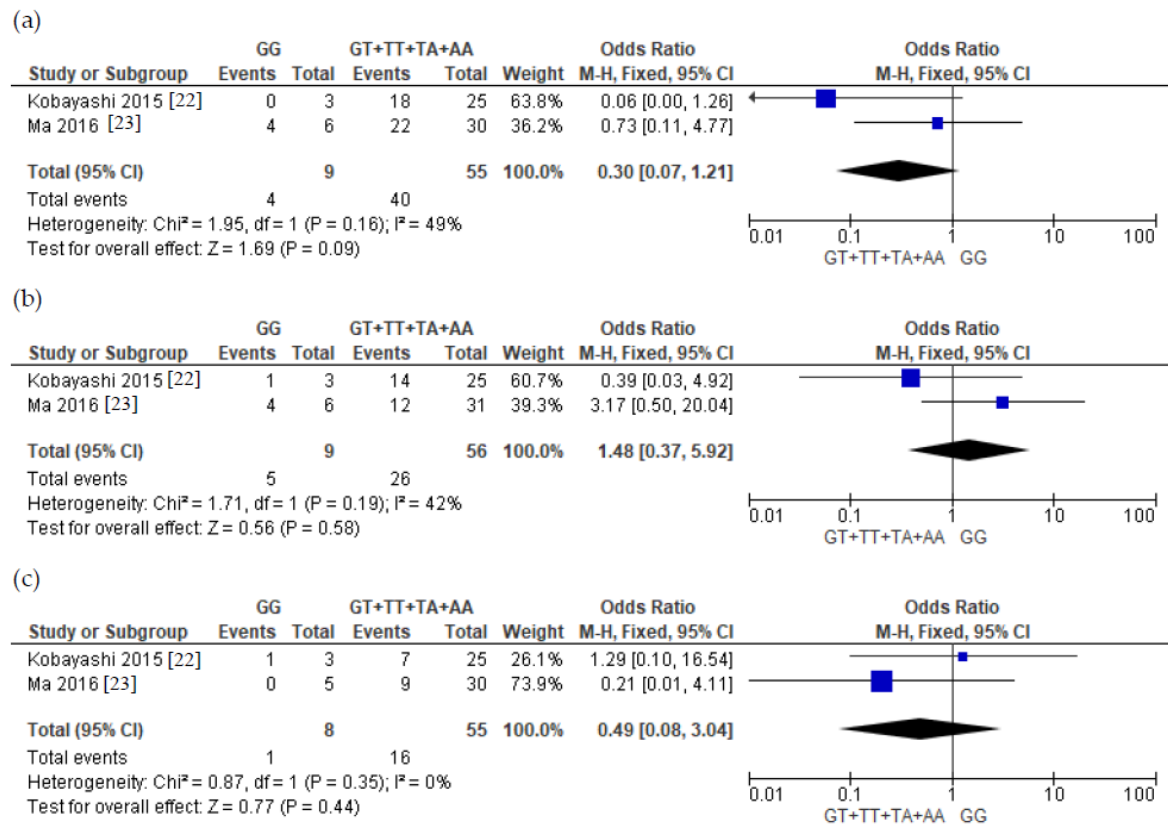

Figure S6. Forest plots of association between adenosine triphosphate-binding cassette subfamily B member 1 (*ABCB1*) gene (rs2032582) genetic variant and adverse drug reaction (grade 0 versus grade ≥ 1). (a) skin rash (GG versus. GT + TT + TA+ AA); (b) diarrhea (GG versus. GT + TT + TA+ AA); and (c) liver dysfunction (GG versus. GT + TT + TA+ AA) [22-23]. CI, confidence interval; M-H, Mantel-Haenszel; I^2 , heterogeneity; χ^2 , Chi-square test for heterogeneity.

Table S2. Excluded Studies

Absolut Number	Reason for exclusion	Authors, year	Title	Reference
1	Wrong population	Wan Z, <i>et al.</i> , 2020	Determinants of gefitinib pharmacokinetics in healthy Chinese male subjects: A pharmacogenomics study of cytochrome p450 enzymes and transporters	[49]
2	Wrong, comparator	Tiseo M, <i>et al.</i> , 2010.	Predictors of gefitinib outcomes in advanced non-small cell lung cancer (NSCLC): Study of a comprehensive panel of molecular markers.	[50]
3	Wrong comparator	Kobayashi H, <i>et al.</i> , 2016.	Effects of polymorphisms in CYP2D6 and ABC transporters and side effects induced by gefitinib on the pharmacokinetics of the gefitinib metabolite, O-desmethyl gefitinib.	[51]
4	Wrong comparator.	Cho BC <i>et al.</i> , 2019.	Osimertinib versus standard of care EGFR TKI as first-line treatment in patients with EGFRm advanced NSCLC: FLAURA Asian subset.	[52]
5	Wrong comparator.	Mou K, <i>et al.</i> , 2016.	Relationship between miR-7 expression and treatment outcomes with gefitinib in non-small cell lung cancer.	[53]
6	Wrong outcome	Ruan Y, <i>et al.</i> , 2016.	Genetic association of curative and adverse reactions to tyrosine kinase inhibitors in Chinese advanced non-small cell lung cancer patients	[54]
7	Wrong publication type	Akasaka K, <i>et al.</i> , 2010.	Impact of functional ABCG2 polymorphisms on the adverse effects of gefitinib in Japanese patients with non-small-cell lung cancer	[55]
8	Wrong publication type	Cusatis G, <i>et al.</i> , 2006.	Pharmacogenetics of ABCG2 and adverse reactions to gefitinib.	[46]
9	Only abstract.	He Y, <i>et al.</i> , 2017.	Comparing EGFR-TKI with EGFR-TKI plus chemotherapy as 1st line treatment in advanced NSCLC patients with both mutated EGFR and Bim polymorphism	[56]
10	Only abstract.	Jeon EK, <i>et al.</i> , 2010.	The association between SNP of EGFR and response to EGFR-TKIs according to EGFR mutation in non-small cell lung cancer	[57]
11	Only abstract and metabolizer gene	Suzumura T, <i>et al.</i> , 2012.	Reduced CYP2D6 function potentiates the gefitinib-induced rash in patients with non-small cell lung cancer	[58]
12	Only abstract.	Xin S, <i>et al.</i> , 2015.	Correlation of polymorphisms of JAK and STAT with gefitinib-induced hepatotoxicity in patients with non-small cell lung cancer.	[59]
13	ABCB1 or ABCB2 gene not involved in outcome	Takimoto T, <i>et al.</i> , 2013	Polymorphisms of CYP2D6 Gene and Gefitinib-Induced Hepatotoxicity	[14]

14	<i>ABCB1</i> or <i>ABCB2</i> gene not involved in outcome	Giovanetti E, <i>et al.</i> , 2010.	Association of polymorphisms in AKT1 and EGFR with clinical outcome and toxicity in non-small cell lung cancer patients treated with gefitinib	[60]
15	<i>ABCB1</i> or <i>ABCB2</i> gene not involved in outcome	Gregorc V, <i>et al.</i> , 2008.	Germline polymorphisms in EGFR and survival in patients with lung cancer receiving gefitinib	[61]
16	<i>ABCB1</i> or <i>ABCB2</i> gene not involved in outcome	Huang CL, <i>et al.</i> , 2009.	EGFR intron 1 dinucleotide repeat polymorphism is associated with the occurrence of skin rash with gefitinib treatment	[62]
17	<i>ABCB1</i> or <i>ABCB2</i> gene not involved in outcome	Sugiyama E, <i>et al.</i> , 2015	Impact of single nucleotide polymorphisms on severe hepatotoxicity induced by EGFR tyrosine kinase inhibitors in patients with non-small cell lung cancer harboring EGFR mutations	[15]
18	<i>ABCB1</i> or <i>ABCB2</i> gene not involved in outcome	Giovanetti E, <i>et al.</i> , 2011.	Influence of polymorphism on EGFR target therapy in non-small-cell lung cancer	[63]
19	<i>ABCB1</i> or <i>ABCB2</i> gene not involved in outcome	Xin S, <i>et al.</i> , 2019.	Polymorphisms of NF-kB pathway gene influence adverse drug reactions of gefitinib in NSCLC patients	[64]
20	<i>ABCB1</i> or <i>ABCB2</i> gene not involved in outcome	Liu G, <i>et al.</i> , 2008.	Epidermal growth factor receptor polymorphisms and clinical outcomes in non-small-cell lung cancer patients treated with gefitinib	[65]

Table S3. Allelic description for meta-analysis (grades ≥ 2 versus grades 0 + 1).
