

Supplementary:

Supplementary Figure. S1. Phylogenetic relationships of isolate LBSim-01 with related taxa derived from maximum-likelihood (ML) analysis using the concatenated sequences of ITS, LSU and EF1A with *Wardomyopsis fusca* as the outgroup. RAxML bootstrap support values (ML ≥ 70) were shown at the nodes. Bar = 0.02 substitutions per nucleotide position.

Supplementary Figure. S2. Phylogenetic relationships of isolate LBSim-01 with related taxa derived from Bayesian posterior probability analysis using the concatenated sequences of ITS, LSU and EF1A with *Wardomycopsis fusca* as the outgroup. Bayesian posterior probability values ($PP \geq 0.90$) were shown at the nodes. Bar = 0.02 substitutions per nucleotide position.

Supplementary Table. S1. Reference data sets of fungal strains and marker sequences used for phylogenetic analysis.
