Four pentasaccharide resin glycosides from *Argyreia acuta*

Abstract

Four pentasaccharide resin glycosides, acutacoside F-I (**1–4**), were isolated from the aerial parts of *Argyreia acuta*. These compounds were characterized as a group of macrolactones of operculinic acid A, and their lactonization site of 11*S*- hydroxyhexadecanoic acid was esterified the second saccharide moiety (Rhamnose) at C-2, The absolute configuration of the aglycone was *S*. Their structures were established by spectroscopic and chemical methods.

Keywords: *Argyreia acuta*; resin glycosides; structural identification

Chemical shifts (δ) are in ppm relative to TMS. The spin coupling (J) is given in parentheses (Hz). Chemical shifts marked with an asterisk (*) indicate overlapped signals. Spin-coupled patterns are designated as follows: br s = broad singlet, d = doublet, t = triplet, m = multiplet, q = quartet. Abbreviations: Glc = glucose; Rha = rhamnose; Ag = 11-hydroxyhexadecanoyl; Mba = 2*S*-methylbutanoyl; Cna = *trans*-cinnamoyl; Bu = butyryl; Dodeca = *n*-dodecanoyl; Tetradeca = *n*-tetradecanoyl.
