Selectivity index (SI) was calculated for each compound using the following formula: $SI_A = IC_{50}$ for normal cell line (HLMEC)/ IC_{50} for respective cancerous cell line as indicated on each plot; $SI_B = IC_{50}$ for normal cell line (MCF-10A)/ IC_{50} for respective cancerous cell line as indicated on each plot. $SI > 1.0$ indicates a drug with the efficacy against tumor cells greater than the toxicity towards normal cells. $SI < 1.0$ non-selective action.
