Supplementary Information

2

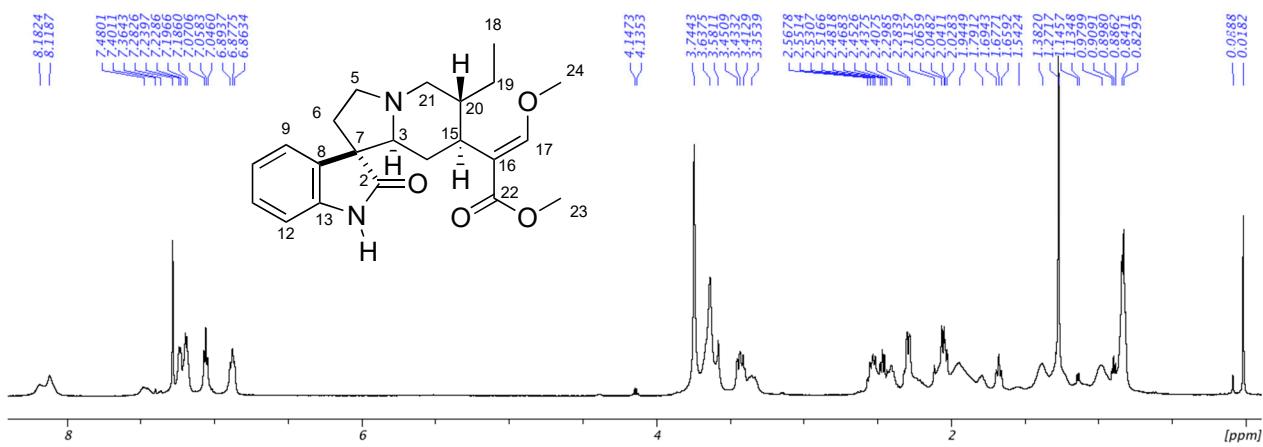

3 Identification of isorhynchophylline by NMR

4

5 The oxindole alkaloids rhynchophylline and isorhynchophylline belong to *normal serie*: C-
 6 3 (α), C-15 (α) and C-20 (β). The ^{13}C -NMR spectrum showed that the chemical displacement of C-
 7 3 of isorhynchophylline (δ 72.0) differ from its isomer rhynchophylline (δ 75.3) due the effect of
 8 carboxyl group presence into oxindole moiety (Table S1; Figure S4). The ^1H NMR spectra
 9 confirmed the chemical structure from isorhynchophylline as well (Figure S1-S3).
