### 1. Contact angle results

Table S1. Contact angle data (static, advancing and receding contact angles) for the structured functionalized surfaces **SMAMP@Au\_Si** and **SMAMP@Au\_PSB@Si**. Contact angles of Si, the polymer monolayers, and 200 nm, 500 nm, 1  $\mu$ m and 2  $\mu$ m spacing structured surfaces have been previously published [43] and presented here for comparison.

## 3. Surface Plasmon Resonance Spectroscopy

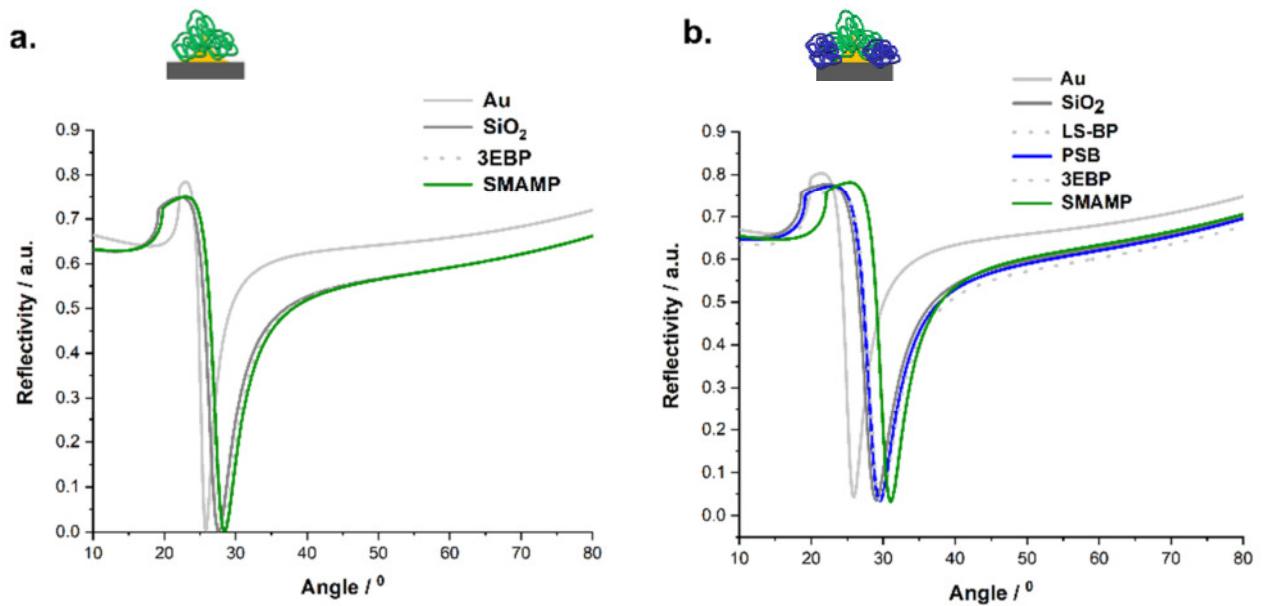

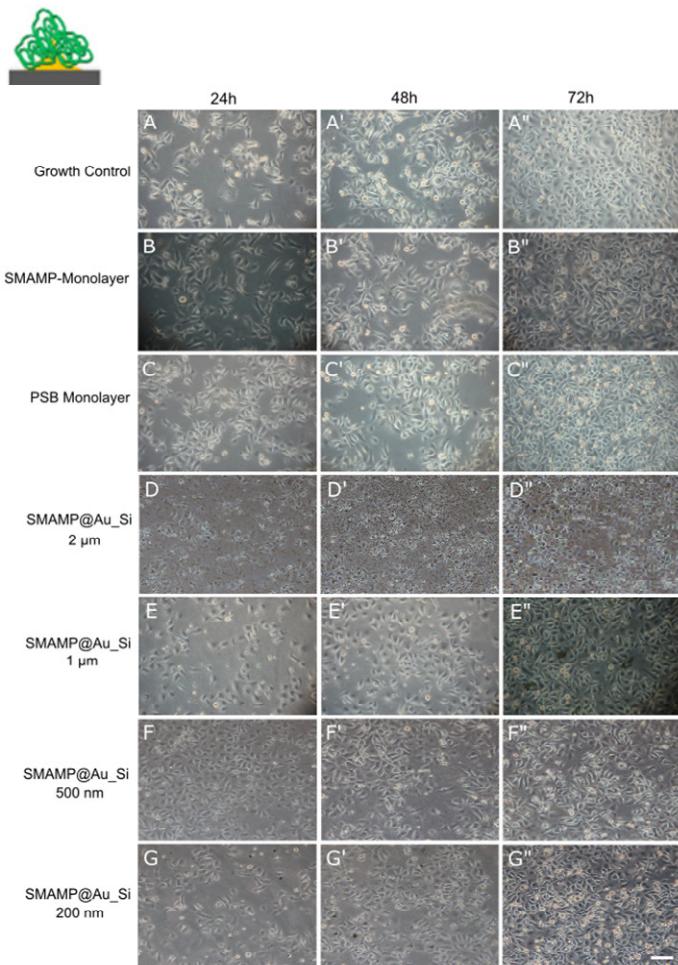

Figure S2. Reflectivity curves after each processing step of the  $2 \mu\text{m}$  functionalized surfaces studied by surface plasmon resonance spectroscopy (SPR) for a. SMAMP@SiO<sub>2</sub>\_Au; b. SMAMP@SiO<sub>2</sub>\_PSB@Au.

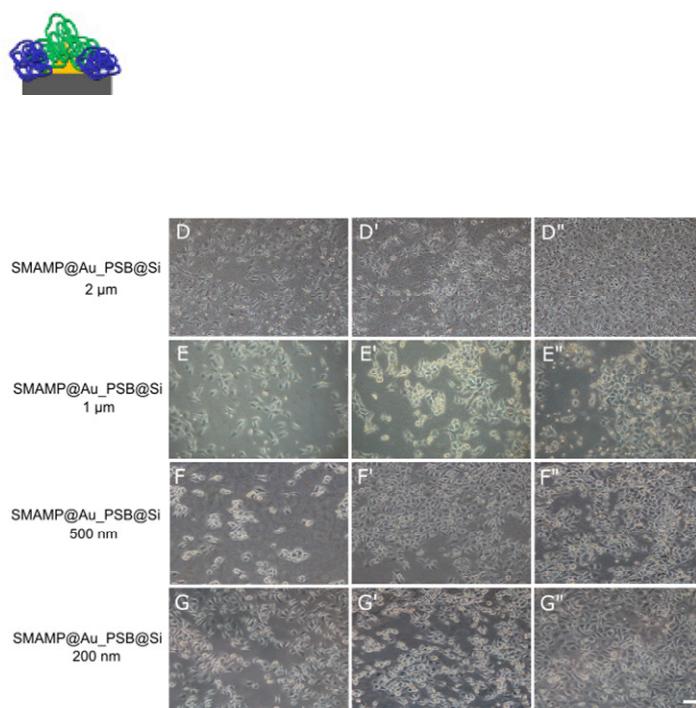

Figure S3. Optical micrographs of human keratinocytes (GM-K) after 24 h (A-G), 48 h (A'-G') and 72 h (A''-G'') growth on a. **SMAMP@Au\_Si** and b. **SMAMP@Au\_PSB@Si** functionalized surfaces with 2 μm, 1 μm, 500 nm and 200 nm spacing. Scale bars: 100 μm.

## 5. Live-Dead Staining of Keratinocytes

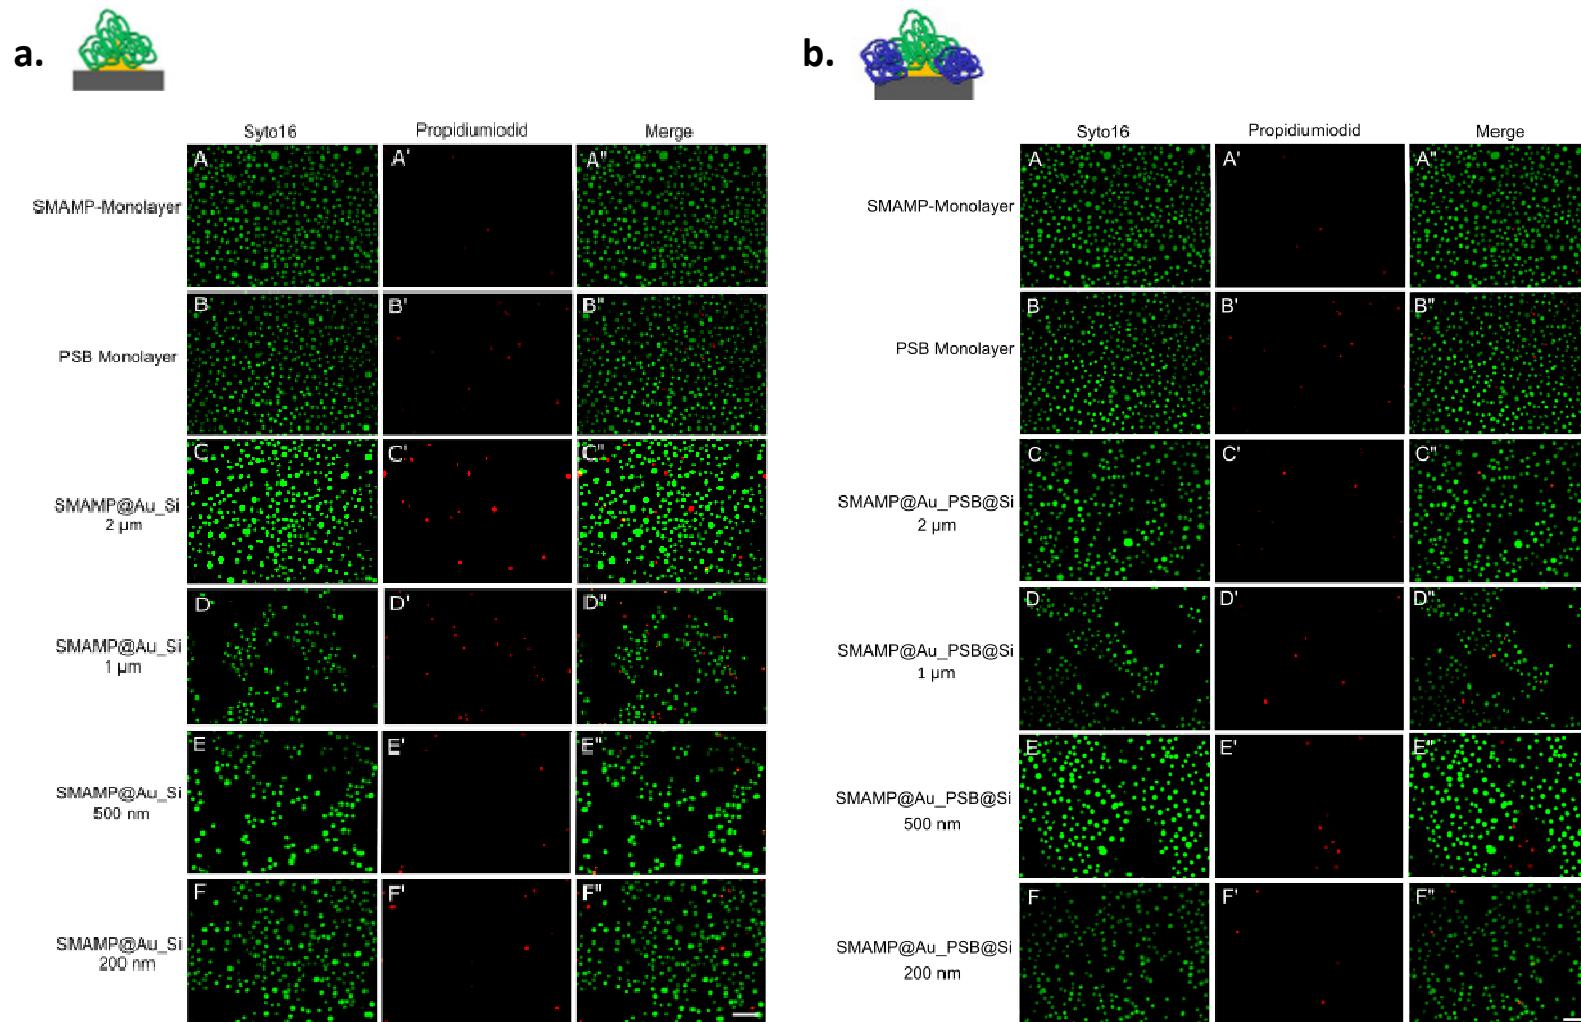

Figure S4 . Live- dead staining images of human Keratinocytes (GM-K) after 72 h grown on a. SMAMP@Au\_Si and b. SMAMP@Au\_PSB@Si functionalized surfaces with 2 μm, 1 μm, 500 nm and 200 nm spacing. The green stain (SYTO 16, A-F) visualizes live cells and the red stain (propidium iodide, A'-F') the dead cells. Merged images are an overlay of both (A'' -F''). Scale bars: 100 μm.
