

Supplementary Materials

Natural Dietary Compound Xanthohumol Regulates the Gut Microbiota and Its Metabolic Profile in a Mouse Model of Alzheimer's Disease

Wei Liu, Kaiwu He, Desheng Wu, Li Zhou, Guowei Li, Zequn Lin, Xifei Yang, Jianjun Liu, Maggie Pui Man Hoi

Contents

Figure S1 Baseline data of NOR test in the prevention and therapeutic experiments using Xn.

Figure S2 Species taxonomy comparison of intestinal microbiome on Family and Genus levels in the prevention and therapeutic experiments with Xn.

Table S1 Ninety-two common differential species in the prevention and therapeutic experiments via LEfSe analysis.

Table S2 Abundance comparison of differential bacteria on the Family level in the prevention and therapeutic experiments.

Table S3 Abundance comparison of differential bacteria on the Genus level in the prevention and therapeutic experiments.

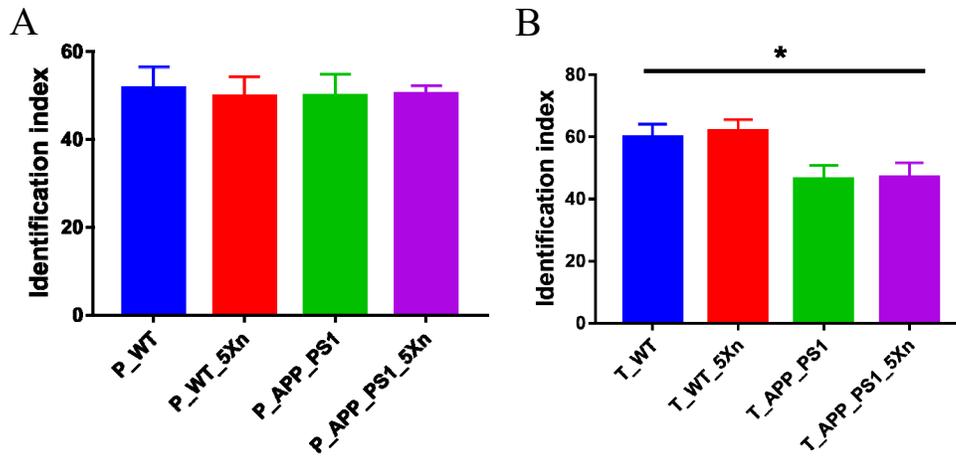

Figure S1 Baseline data from the NOR test in the prevention and therapeutic experiments using Xn. (A) NOR test in the prevention experiment ($n = 7-11$ per group). No difference was found in the baseline ($F=0.04$, $P=0.989$). (B) NOR test in the therapeutic experiment ($n = 10-14$ per group). Significant difference was found in the baseline ($F = 3.74$, $p = 0.0183$). NOR, novel object recognition test. The baseline data from the NOR test were analyzed by one-way ANOVA. Error bar, SEM.

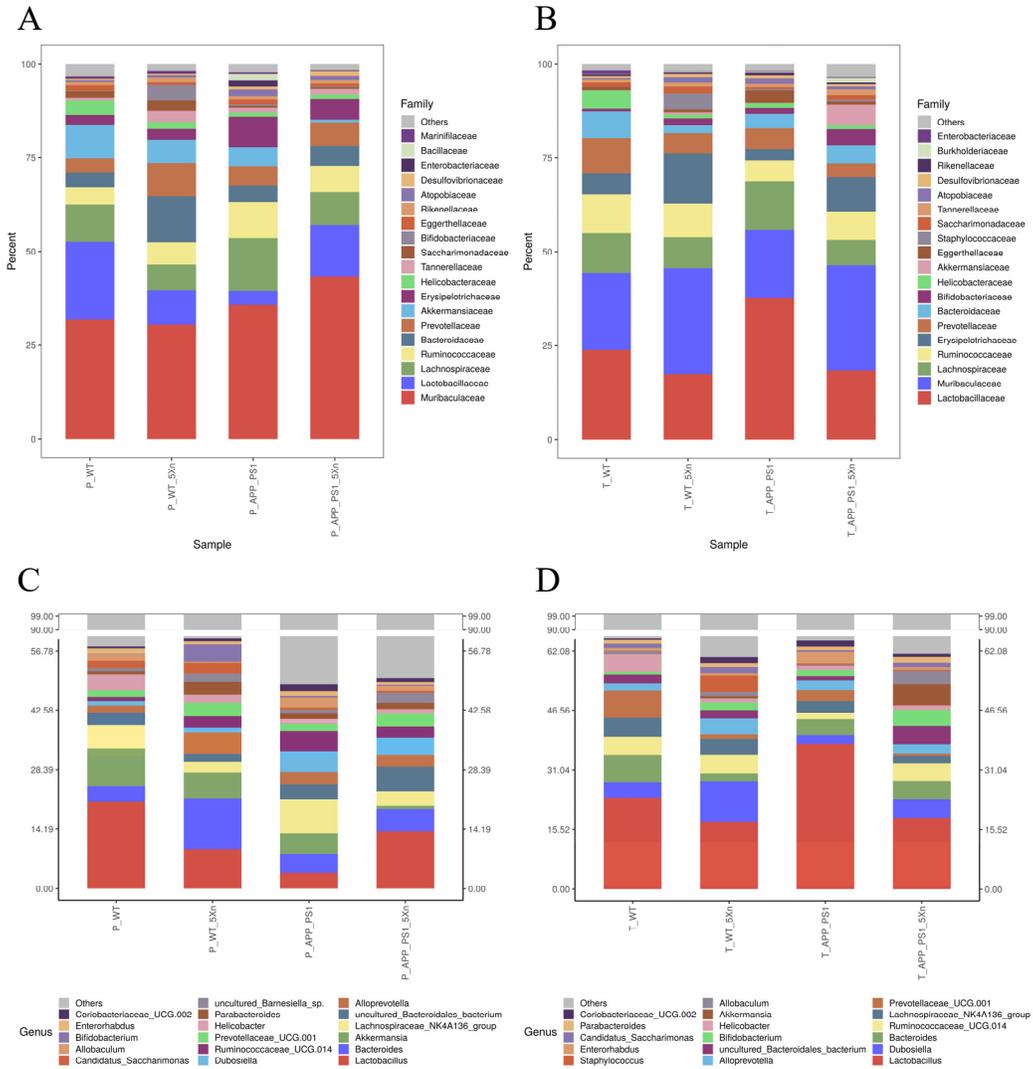

Figure S2 Species taxonomy comparison of intestinal microbiome on Family and Genus levels in the prevention and therapeutic experiments with Xn. **(A,C)** Species composition and abundance analysis in the prevention experiment ($n = 7-8$ per group). **(B,D)** Species composition and abundance analysis in the therapeutic experiment ($n = 12$ per group). Different colors of the columns indicate different species. The length of the columns indicates the relative abundance of the species.

Table S1 Ninety-two common differential species in the prevention and therapeutic experiments via LefSe analysis.

Different Species	Prevention Experiment				Therapy Experiment

These differential species were identified with LDA Scores > 2.0 are based on Kruskal-Wallis test and Wilcoxon test. Group indicates a high abundance of differential species and plays an important role in this group. D1, D2, D3, D4, D5 and D6 represent Domain, Phylum, Class, Order, Family and Genus, respectively. Black bold words indicate selected representative differential species. LDA, Line Discriminant Analysis. LEfSe, LDA Effect Size.

Table S2 Abundance comparison of differential bacteria on Family level in the prevention and therapeutic experiments.

Abundance comparison of differential bacteria was done via Kruskal-Wallis test. Black boldface words indicate the bacteria with the same regulation tendency after Xn treatment.

Table S3 Abundance comparison of differential bacteria on Genus level in the prevention and therapeutic experiments.

Abundance comparison of differential bacteria was done via the Kruskal-Wallis test. Black boldface words indicate the bacteria with the same regulation tendency after Xn treatment.
