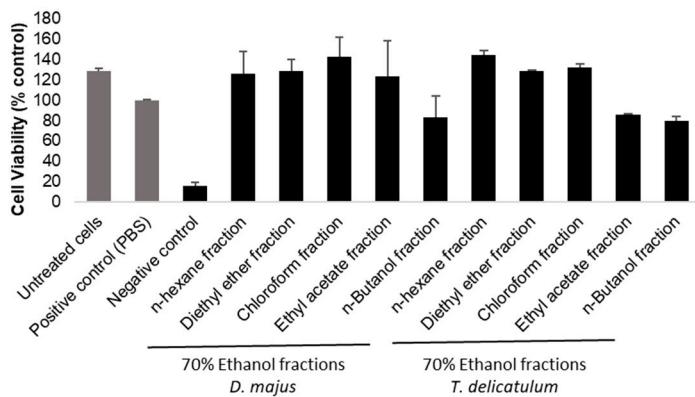

Figure S1. Effect of 70% ethanol and ethyl acetate derived fractions on the viability of RAW 264.7 cells determined by MTT assay. **A)** Ethyl acetate derived fractions from *D. majus* and *T. delicatulum* and **B)** 70% ethanol derived fractions from *D. majus* and *T. delicatulum*. Cells were treated with 10 μ g/mL of fractions for 24 h. Data represent mean \pm standard deviation (n= 2-3) and values are normalized on control (PBS). Negative control (10% DMSO).

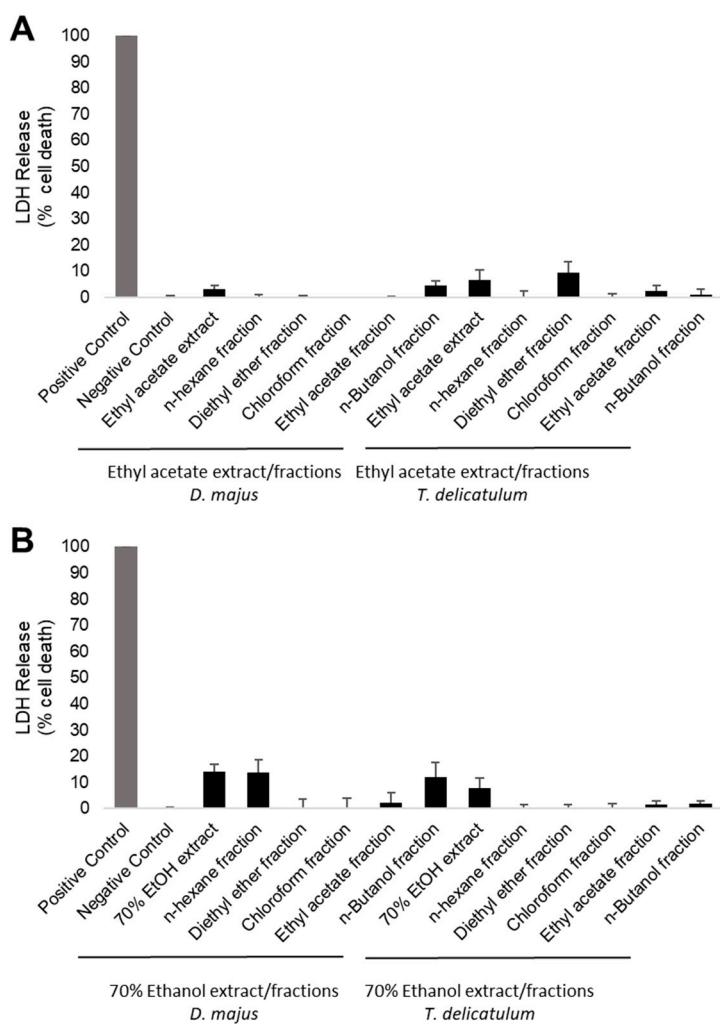

Figure S2. Cell death assessed by lactate dehydrogenase (LDH) release assay after treatment with bioactive whole extracts and derived fractions. **A)** Ethyl acetate extracts and derived fractions of *D. majus* and *T. delicatulum*. **B)** 70% ethanol extracts and derived fractions of *D. majus* and *T. delicatulum*. Cells were treated with 10 µg/mL of extracts/fractions for 24 h. Data represent mean ± standard deviation (n= 2-3). Positive control (no treated lysed cells) and negative control (0.1 % DMSO). The tested extracts/fractions revealed significant difference (P-values < 0.05, calculated with ANOVA).
