To a solution of alcohol $1(225 \mathrm{mg}, 0.43 \mathrm{mmol})$ [1] in dry $N, N$-dimethylformamide ( 0.9 ml ) at $0^{\circ} \mathrm{C}$ under an atmosphere of nitrogen was added imidazole ( $72 \mathrm{mg}, 1.1 \mathrm{mmol}$ ) and tert-butyldimethylsilyl chloride $(67 \mathrm{mg}, 0.45 \mathrm{mmol}$ ). The resultant solution was allowed to reach room temperature and stirred overnight. The reaction mixture was poured into ether ( 17 ml ), washed with water ( $3 \times 4 \mathrm{ml}$ ), brine ( 4 ml ) then dried over sodium sulfate. Removal of the solvent at reduced pressure afforded a pale yellow oil that was purified by flash chromatography using light petroleum-ethyl acetate (4:1) as eluent to give the title compound 2 ( $246 \mathrm{mg}, 89 \%$ ) as a colourless oil.
