

Supplementary Information

Figure S1. Disorder prediction by CSpritz [1] algorithm of human Drosha showing two different regions: a N-terminal disordered region and a C-terminal structured region comprising the two RNase domains and the dsRNA binding domain.

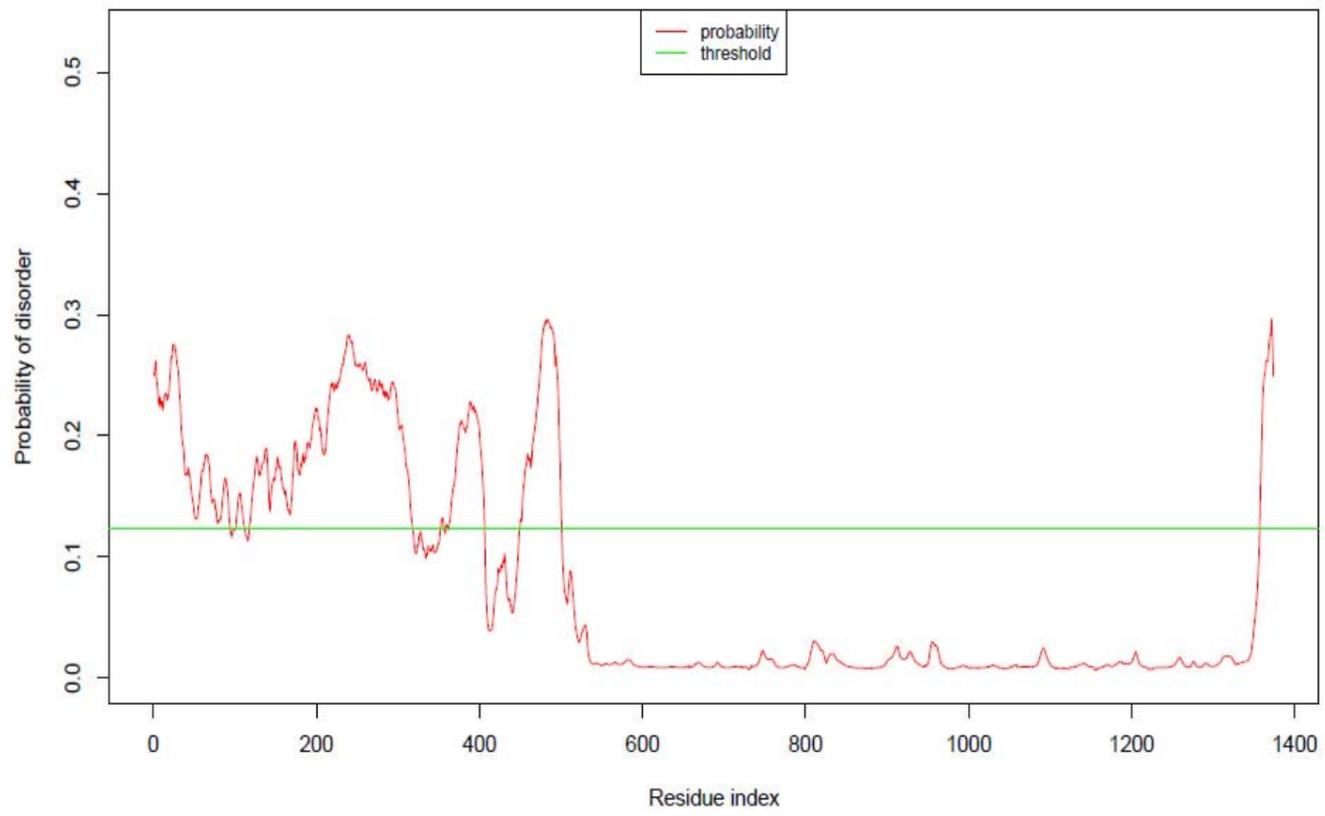

Figure S2. Alignment of Dicer proteins from several eukaryotic organisms constructed by PRALINE software [2]. Color codes refer to the conservation of a particular residue in each protein position.

Results colour-coded for amino acid conservation

The current colourscheme of the alignment is for amino acid conservation. The conservation scoring is performed by PRALINE. The scoring scheme works from 0 for the least conserved alignment position, up to 10 for the most conserved alignment position. The colour assignments are:

Unconserved 0 1 2 3 4 5 6 7 8 9 10 Conserved

Figure S3. Phylogenetic tree derived from the alignment of Dicer proteins showed in Figure S1.

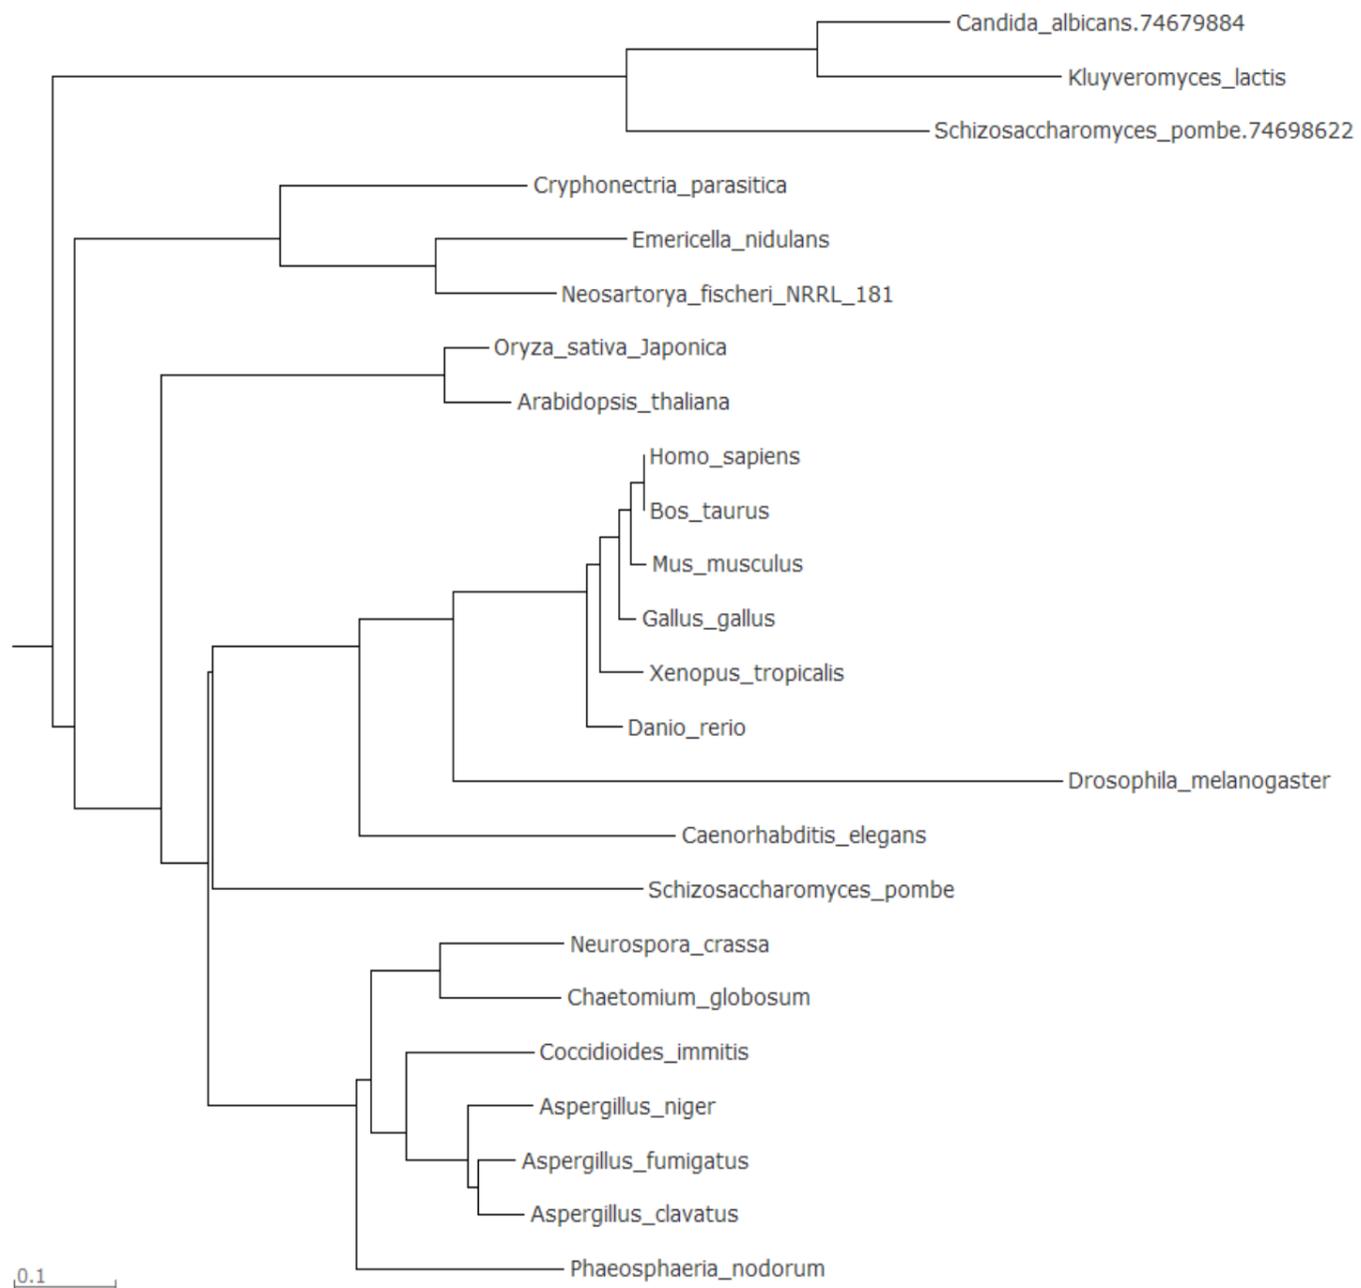

Figure S4. Alignment of human argonaute sequences with Multalin software [3,4]. Figure was generated with ESPrnt [5,6] including the secondary structure elements of human AGO2 crystal structure on the top.

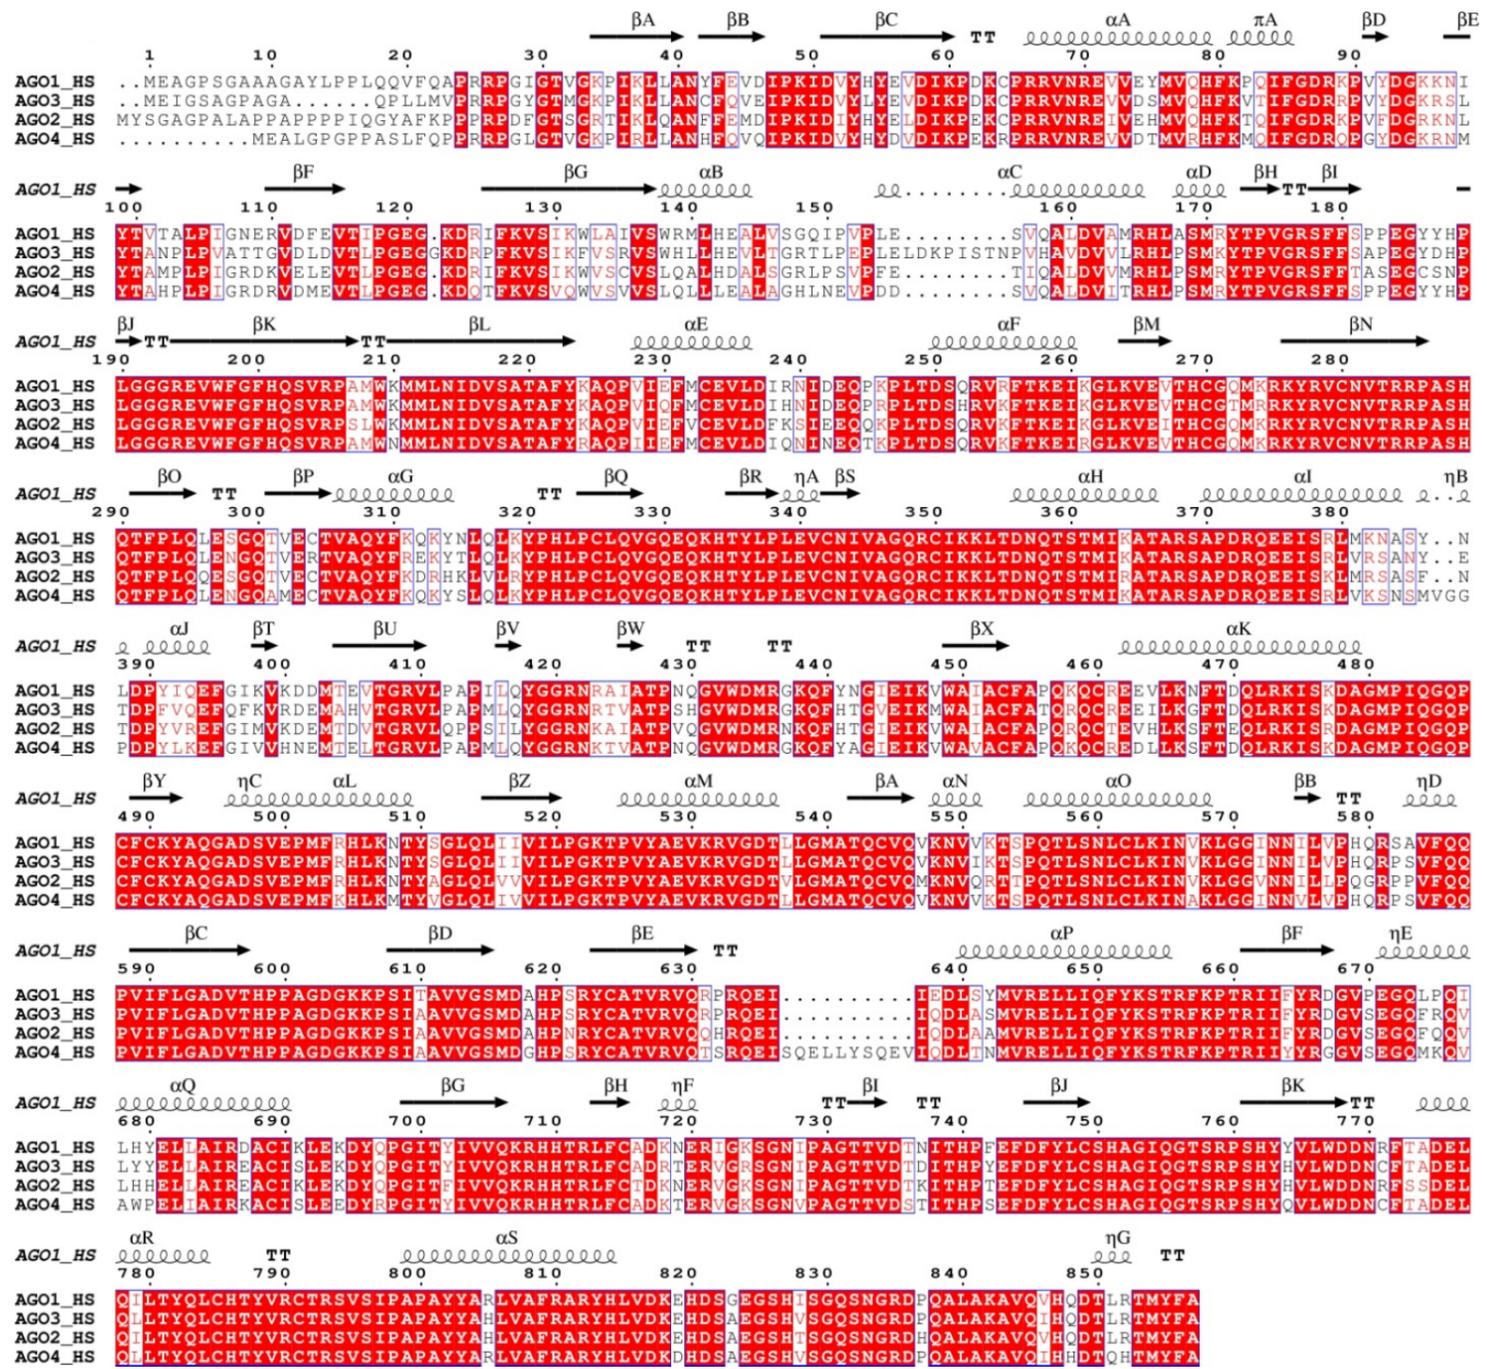

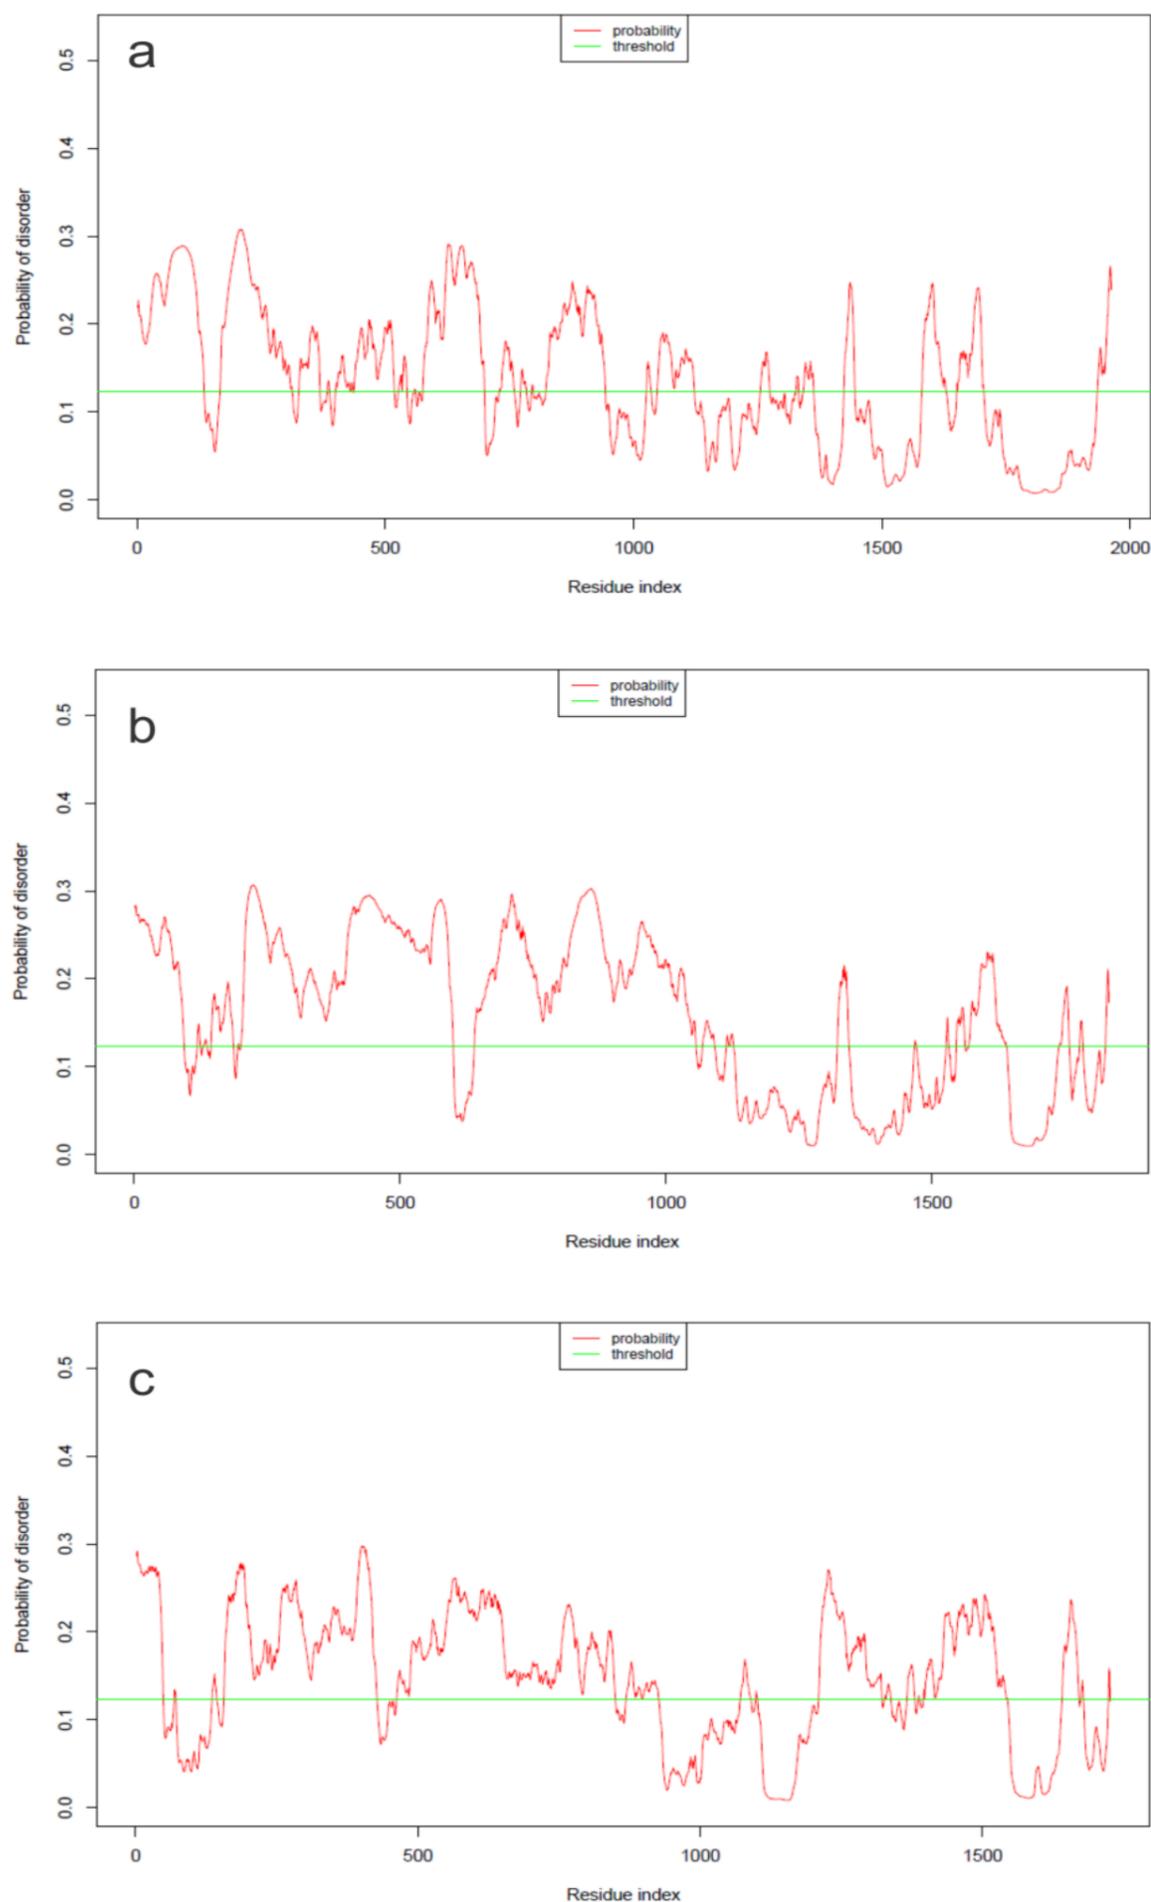

Figure S5. Disorder prediction by CSpritz [1] algorithm of human TNRC6 family of proteins. (a) TNRC6A, (b) TNRC6B and (c) TNRC6C.
