

Supplementary Information

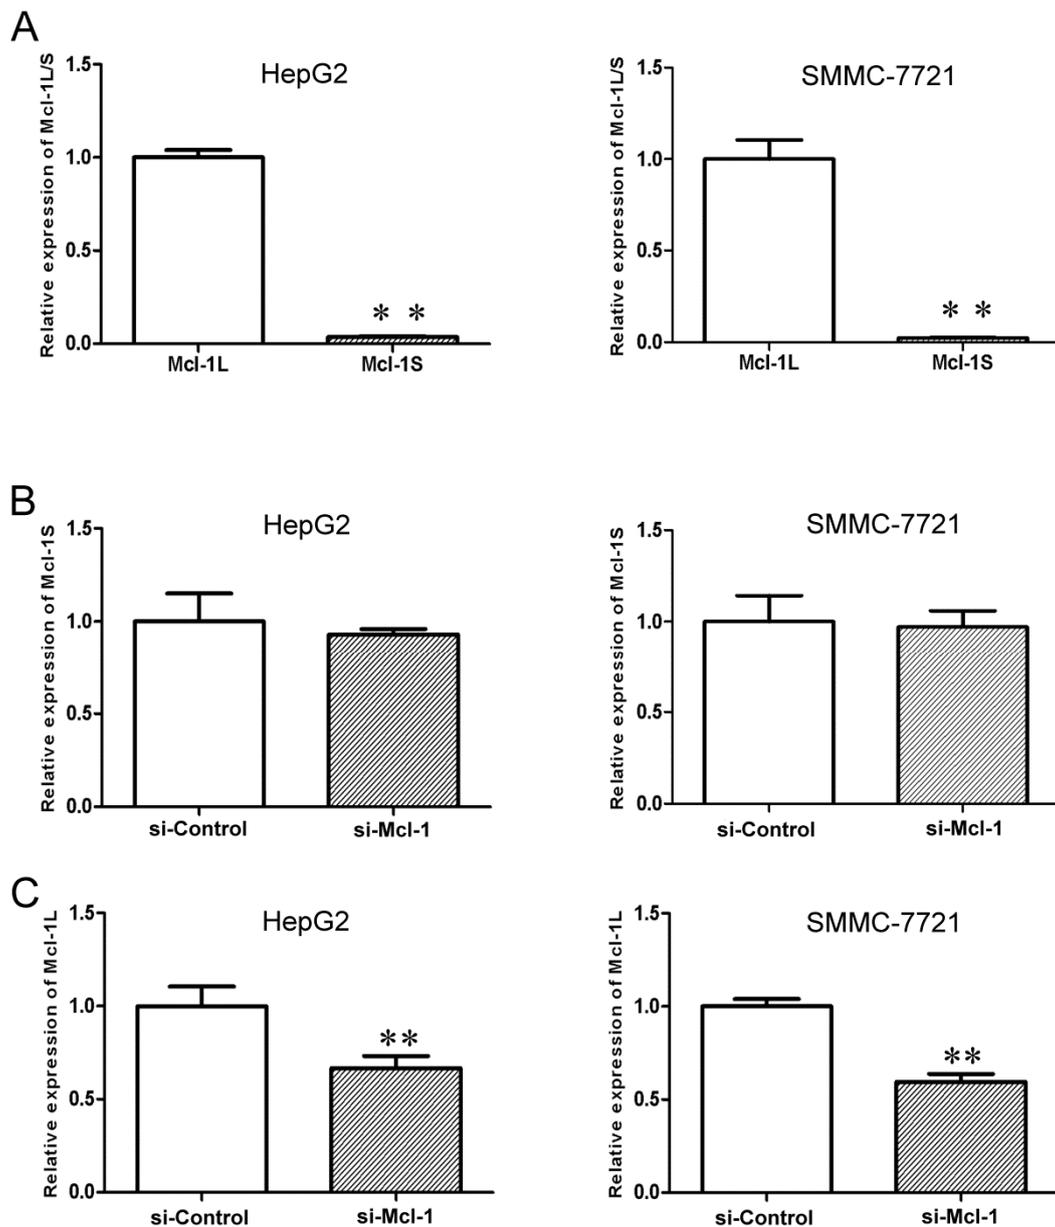

Figure S1. *Mcl-1S* little influence the inhibiting effect of *Mcl-1* siRNA. (A) QRT-PCR showed that a huge difference in endogenous expression level between *Mcl-1L* and *Mcl-1S* in HepG2/SMMC-7721 cell lines; (B) *Mcl-1S* decreased little after transfection of *Mcl-1* siRNA into HepG2/SMMC-7721; (C) *Mcl-1L* decreased obviously after transfection of *Mcl-1* siRNA into HepG2/SMMC-7721. Error bars represent the S.D; ** $p < 0.01$, vs. the corresponding controls.
