Figure S1. The D-loop regions sequence of the three *Cryptocercus* species' mitochondrial genomes. Bold and underlined segments indicate the 31bp relatively conserved sequence in the three *Cryptocercus* species. Framed segment indicates TA repeats. Dotted segments indicate A/T single copy sequences.

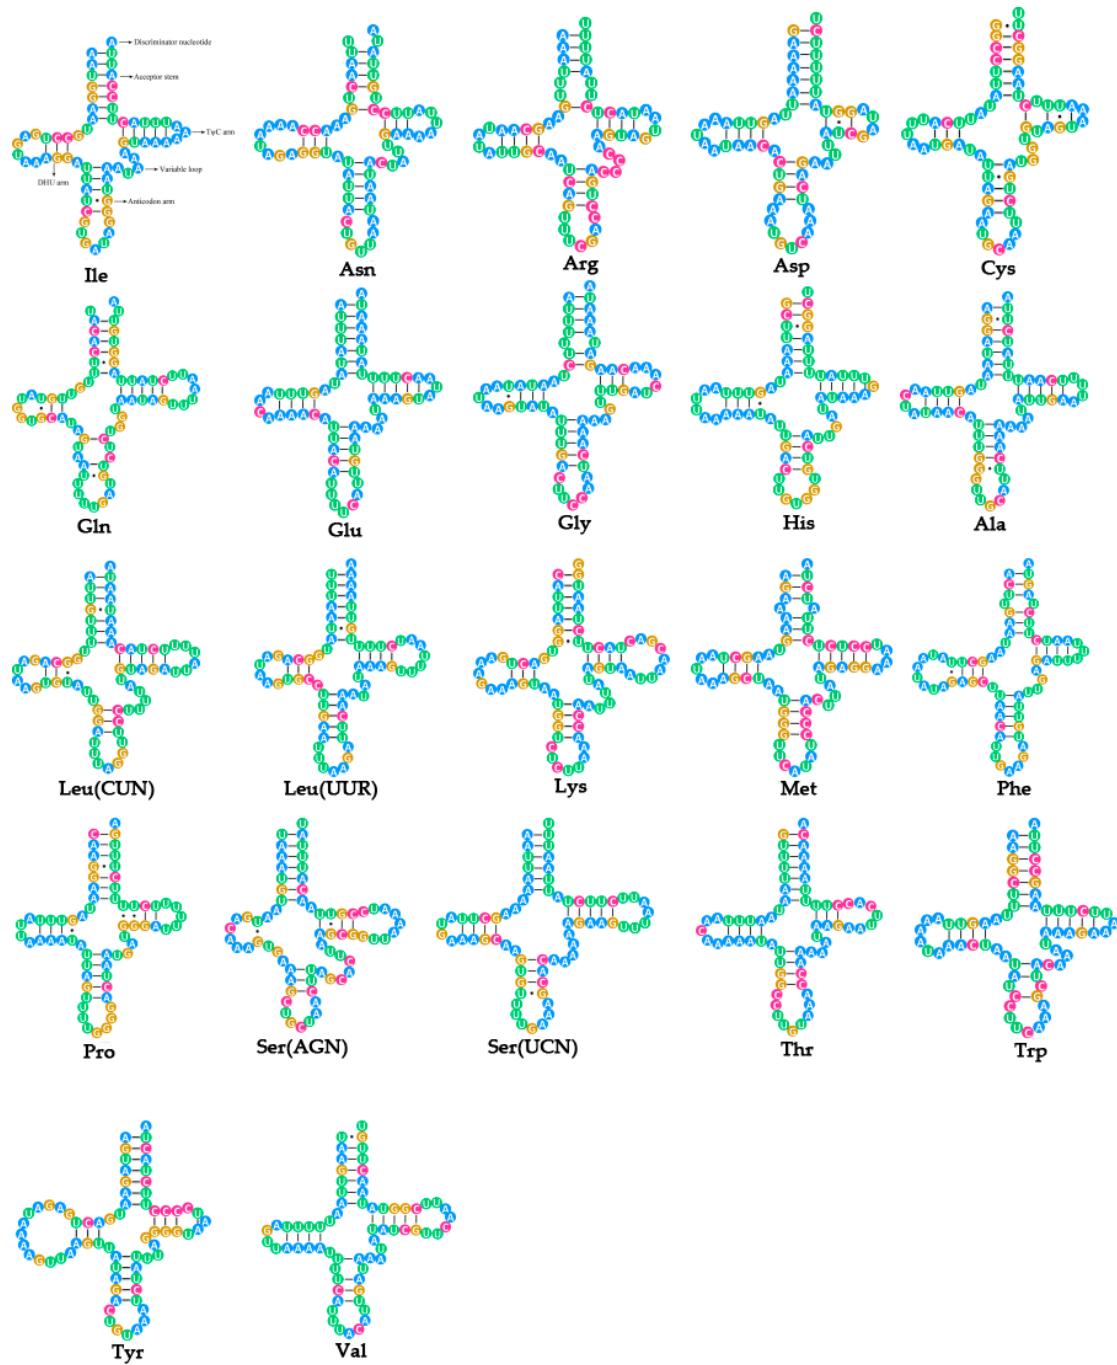

Figure S2. Inferred secondary structure of 22 tRNA genes for *C. meridianus*.

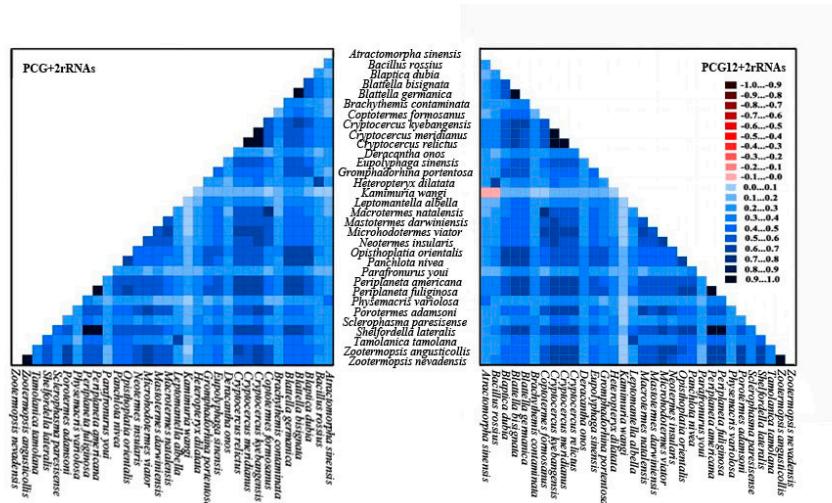

Figure S3. AliGROOVE result of concatenated gene analyses on two datasets. The mean similarity score between sequences is showed by a colored square, based on AliGROOVE scores from -1, indicating a great difference in rates from the other sequences of the data set, that is, heterogeneity (red coloring), to +1 indicating that rates match all other comparisons (blue coloring).

Table S1. Primers used in this study.

Region	Primers (F & R)	Sequence (5' → 3')
