

Figure S1. Growth of *Xoo*(EV), *Xoo*(FleQ), *XooΔfleQ*(EV) and *XooΔfleQ*(FleQ) in PSB media. *Xoo* strains were grown, adjusted OD₆₀₀ of 0.3, serially diluted (10^{-3}), and grown in PSB media. Values of optical density (OD) at 600 nm were measured at 0, 1, 2, 3, 4, and 5 days after incubation. Data points indicate the means of three biological replicates with the standard deviations.
