

Supplement Table S2. Microarray data of 52 genes up-regulated in nucleus pulposus (NP) compared to annulus fibrosus (AF). Data from all differently expressed genes with fold-change (FC) AF/NP <-2 and change% >80%. Sorting according to FC AF/NP. FC is presented as mean ± SD of all comparisons AF/NP array data with respective p-value (mean). Signal detection is shown as percentage presence (detection%) in the corresponding tissue, AF or NP, and as absolute mean signal value of all AF or NP arrays. Data was obtained from n=11 AF and n=9 NP samples. Gene titles are shown as in annotations of microarray. *actual official NCBI gene symbol and title, old symbol of array annotations is noted in brackets. **more than 2 different gene titles and gene symbols, for all gene titles and symbols see array annotations. /// separates different gene titles and gene symbols for the same gene ID. Selected NP markers for qPCR are highlighted in bold.
