

Supplement Table S1. Microarray data of 267 genes up-regulated in annulus fibrosus (AF) compared to nucleus pulposus (NP). Data from all differently expressed genes with fold-change (FC) AF/NP >2 and change% >80%. Sorting according to FC AF/NP. FC is presented as mean ± SD of all comparisons AF/NP array data with respective p-value (mean). Signal detection is shown as percentage presence (detection%) in the corresponding tissue, AF or NP, and as absolute mean signal value of all AF or NP arrays. Data was obtained from n=11 AF and n=9 NP samples. Gene titles are shown as in annotations of microarray. *actual official NCBI gene symbol and title, old symbol of array annotations is noted in brackets. **more than 2 different gene titles and gene symbols, for all gene titles and symbols see array annotations. /// separates different gene titles and gene symbols for the same gene ID. Selected markers for qPCR are highlighted in bold.

Gene Title	Gene Symbol	Gene ID	FC AF/NP	p-value	detection%		Signal mean	
			mean ± SD	mean	AF	NP	AF	NP
