

**Figure S1.** We selected the melanoma cells (B16-F10 cells) for the study and also used different concentration of bornyl cis-4-hydroxycinnamate for the MTT assay. The cell viability assay results were similar to A2058 cells and A375 cells.

**Figure S2.** We selected the fibroblast cells (WS-1 cells) for cell cytotoxicity analysis. In the results, we found that bornyl cis-4-hydroxycinnamate was not significantly cytotoxic for WS-1 cells.
