

Table S1. STR analysis of OVCAR8, OVCAR8^{luc} cell lines and subsequent xenograft tumor samples from mice 96e, 97L, 99d and 99e. 97L-m and 99e-m represent samples from metastatic lesions isolated from small intestine.

Cell line	Marker	STR analysis result		Reference profile

Figure S1 Changes in abdominal girth of tumor bearing mice. Data are shown as mean $\pm$ SD, $n = 8$ for mice inoculated with 5 million cells, $n = 9$ for mice inoculated with 10 million cells.

Figure S2. Kaplan-Meier Survival curve of tumor bearing mice without treatment. Statistical analysis was done by Mantel-Cox test, $p = 0.005$, $n = 8$ for mice inoculated with 5 million cells, $n = 9$ for mice inoculated with 10 million cells.

Figure S3. Tumor growth as quantified by bioluminescence signal. Data are shown as mean $\pm$ SD. Statistical analysis was done by two-way ANOVA with Sidak's test. $n = 8$ for mice inoculated with 5 million cells, $n = 9$ for mice inoculated with 10 million cells.

Figure S4. H and E staining of xenograft revealed necrosis at the tumor core. The figure shows a representative image of a xenograft sample at 4 $\times$ magnification and the insert represents 40 $\times$ magnification. The black arrow indicates normal cells with intact nucleus and cytoplasm. The red arrows indicate compacted nuclei indicative of cell death. Scale bar equal to 500 and 50 μ m for 4 $\times$ and 40 $\times$ magnification, respectively.

Figure S5. Carboplatin (30 mg/kg) treatment significantly reduce (A) tumor weight and (B) tumor volume. Statistical analysis was done by two-tailed, unpaired student t-test with Welch's correction, $n = 5$ for each group. * $p < 0.05$.

Figure S6. Immunostaining of HIF1- α in xenograft obtained from mouse inoculated with (A) 5 million and (B) 10 million OVCAR8^{Luc} cells. The figure shows a representative image of a xenograft sample at 4 $\times$ magnification and the insert represents 40 $\times$ magnification. Scale bar equal to 500 and 50 μ m for 4 $\times$ and 40 $\times$ magnification, respectively.

Figure S7. Changes in (A) body weight and (B) abdominal girth in tumor bearing mice receiving control or carboplatin treatment. Data are shown as mean $\pm$ SD. Statistical analysis was done by two-way ANOVA with Sidak's test, $n = 5$ for each group. However, no significance was found. Black arrow indicates treatment days (day 29, 39 and 49 post-inoculation).
