

Supplementary Figure

Supplementary Figure S1. Pharmacological interference experiments of Indometacin (IDM) and histamine H₂-receptor antagonists (H₂RA) on intestinal epithelial cells. The cell viability of the human colonic carcinoma cell line Caco-2 subjected to IDM and H₂RA was evaluated. Statistical analysis was performed using a two-way ANOVA with Tukey's post-hoc test. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.
