

Supplementary Figure 1. MiR-216a expression levels after miR-216a pre-miRNA or anti-miRNA transient transfection. (A) qRT-PCR revealed the upregulation of miR-216a in breast mammospheres after miR-216a transfection with respect to scrambled control. (B) qRT-PCR revealed the down regulation levels of miR-216a in differentiated cells after anti-miR transfection with respect to scrambled control. Data are mean values \pm SD of three independent experiments. Significance was calculated using Student's t-test .*, $p < 0.05$; **, $p < 0.01$. ***.
