

**Figure S1. (A)** Xenograft tissue from DMW-treated mice showed necrosis (thick arrows) invading small neoplastic areas and single neoplastic cells (thin arrows) **(B)** Xenograft tissue from DMW-treated mice showed neoplastic cells with clear signs of pyknosis (arrowhead), karyorrhexis (arrow) and karyolysis (ghost cells) (circle). (H-E; original magnification  $\times 10$ ).

**Supplementary Table S1.** Necrosis entity in xenograft tumour tissue from DMW-treated or untreated mice.

NUMBER OF SAMPLES	NECROSIS ENTITY
<b>Control</b>	
7	MILD
3	MODERATE
1	SEVERE
<b>DMW</b>	
3	MILD
3	MODERATE
5	SEVERE
