Figure S1. 400 MHz <sup>1</sup>H NMR spectrum of N,O-(carboxymethyl)chitosan

**Figure S2.** FI-IR spectra: 1 chitosan (CH) and chitosan-based cryogels (a); CMC and CMC-based cryogels (b).

**Figure S3.** Strain-stress curve measured for CMC-PEG cryogel in the air and photos illustrated sample deformation and size recovery

**Figure S4.** The results of flow cytometrical analysis and microscopic observation of human embryonic kidney cell line HEK-293T cultivated for 1, 2, 3, 4, 7 and 14 days in adhesive or ultra-low attachment plates. The cells were stained with H<sub>2</sub>DCFDA to assess the mitochondrial activity, and DAPI to stain dead cells. The data is presented as a mean of three independent experiments. Standard deviations did not exceed 5%. The cells were imaged under a CKX41 inverted microscope (Olympus, Japan) equipped with phase-contrast optics. Scale bar – 200  $\mu$ m.

(c)

(d)

**Figure S5.** Confocal laser scanning microscopy (CLSM) images of HEK-293T cells after 3 days of cultivation in CH-BD (a) and CH-PEG (b) cryogels and after 10 days of cultivation in CMC-PEG (c) and CMC-BD (d) cryogels. and chitosan (CH)-based cryogels (BDDGE:polymer ratio of 1:4) with HCT 116 cells after 3, 7, and 14 days of cultivation. Scale bar—100  $\mu\text{m}$  or 50  $\mu\text{m}$  for the images marked with asterisk.

(a)

(b)

**Figure S6.** Growth curves of *Pseudomonas fluorescens* 1574 (a) and *Staphylococcus aureus* ATCC 21027 (b) in Nutrient Broth (NBr) and DMEM cell culture medium.

**Table S1.** Monomer composition of carboxymethyl chitosan (CMC)

DA <sup>1</sup>	DS <sub>tot</sub> <sup>2</sup>	N-DS <sup>3</sup>	O-DS <sup>4</sup>	Monomer composition			
				NH <sub>2</sub>	NHR	NR <sub>2</sub>	NHCOCH <sub>3</sub>
0.25	1.49	0.29	1.20	0.46	0.29	0	0.25

<sup>1</sup> - Degree of acetylation, <sup>2</sup> - Degree of carboxyalkyl substitution (total), <sup>3</sup> - Degree of N-carboxyalkyl substitution,

<sup>4</sup> - Degree of O-carboxyalkyl substitution

**Table S2.** Calculations of reagents quantities for the chitosan (CH) and carboxymethyl chitosan (CMC)cryogels fabrication

	Polymer	Cross-linker	Cross-linker : polymer molar ratio	3% polymer solution, g	Cross-linker, g*
CH-BD	Chitosan	BDDGE	1:4	5	0,07755
CH-PEG		PEGDGE	1:12	5	0.03834
CMC-BD	CMC	BDDGE	1:2	5	0.10136
CMC-PEG		PEGDGE	1:8	5	0.03759

\*BDDGE used as 60% solution; PEGDGE Mn~ 500 g/mol, used as >99% solution
